COMM-DC-57842

SUMMARY
TO ACCOMPANY SHORELINE MANUSCRIPTS
T-10558 and T-10559

Subject surveys are two of shoreline mapping Project PH-171 (27380). The project covers the Tampa Bay, Florida area. It was designed to support hydrographic surveys for subsequent revision of existing nautical charts. T-10558 covers that portion of St. Petersburg directly on Tampa Bay and T-10559 the opposite shore in the vicinity of Big Bend.

These two shoreline manuscripts were compiled graphically and according to instructions of May 1957 at the Tampa District Office in Nov. 57 and Jan. 58. They are based on nine-lens and Wild Aviogon photography of April 1957 and field inspection of Aug. 1957. The submitted manuscripts are the result of adequately scribed sheets and after limited additions and corrections during Washington Office Review ready for direct reproduction of permanent file copy.

Cronar film positives at the compilation scale of 1:10,000 and the Descriptive Reports will be registered and filed in the Bureau Archives.

October 1959

FIELD INSPECTION REPORT

PROJECT PH-171

2. AREAL FIELD INSPECTION

This report covers the entire project of twenty-seven shoreline manuscripts numbered T-10542 through T-10568.

Sheets numbered T-10542 through T-10561 and Sheet T-10565 are located along the shores of the bays. Sheets numbered T-10563, T-10564 and T-10566 through T-10568 are principally water with all or parts of the numerous islands making up the land area.

The area is both urban and rural. The two sizeable cities are Tampa and St. Petersburg. Tampa is one of the principal ports along the Gulf of Mexico and both cities are nationally known winter resorts. Large fleets of commercial fishing boats base out of each of the cities.

The rural areas consist mainly of stretches of sandy shore, along the bays and the islands. The land is flat and poorly drained. Vegetation consists of scattered pine, oak, palmetto and brush. Near the shore and on the islands are large areas of mangrove swamp with fringes of grass bordering their outer extremities. The mangrove extends from a fringe to several hundred feet. Some of the islands are completely covered by dense mangrove.

The area is served by a system of good highways and two railroads. A deep water channel, from the Gulf, affords passage for ocean going vessels to Port Tampa and the Port of Tampa. Tampa and St. Petersburg both have large airport facilities for commercial aircraft.

Field inspection was performed in accordance with Project Instructions dated 8 May 1957 and is believed complete except for the following:

The Florida Power Corporation is constructing a plant which falls on Sheet T-10554. The dredging for the fill was completed but the construction of the building and tank farm is in progress. In Sheet T-10555, construction is in progress around the Port Tampa railroad docks. A new bridge is under construction, which will cross sheets T-10544, T-10545, T-10549 and T-10550. All of the preceding areas will have to be brought up-to-date after construction has been completed.

Nine-lens photography at 1:10,000 scale was used for field inspection. The photographs were of recent date and, with the exception of one area, of good quality. (See letter from Chief, Photogrammetry Division, dated 10 June 1957). In the area where the nine-lens photographs were bad, field inspection was performed on the single-lens infra-red photographs. The tones ranged from white in the sandy areas, through grey in the grassy areas, to black in the areas covered by mangrove.

The only difficulty in interpreting the photographic tones was the line between the mangrove and the grass-in-water. This was only difficult in areas where the bottom was mud. This gave the grass a much darker tone than is usually the case. In these cases, the apparent shoreline was drawn in the field.

3. HORIZONTAL CONTROL

All Coast and Geodetic Survey control was searched for and Forms 526 submitted. The only stations identified were those deemed essential by the compilation office to control the radial plot.

A small scheme of triangulation was observed along Hillsboro and McKay Bays. Fifty main scheme and intersection stations were established. See attached ozalid print of sketch. Standard methods for second-order triangulation were used in observing the main scheme stations. Third-order methods were used for the intersection stations.

Positions from the field computations were used to control the plot. No adjustments were made by the field party.

The following stations were reported lost:

60.8 W.

The following lost stations were identified to aid in control of plot:

Y 4 1934 Y 18 1934 Y 32 1934 F 10 1934 BOOTH 1926
PINELLAS PARK SILVER MUNICIPAL TANK 1934
SUN CITY POWER CO. SILVER WATER TANK 1934

Regarding the four above traverse stations, remains of monuments were found in the described locations and were identified due to scarcity of control in those immediate areas. The footings of the two tanks were still in place and they were identified for the same reason. Station BOOTH was not found but one of the reference marks was identified in lieu of the station.

4. VERTICAL CONTROL

All tidal bench marks were searched for and where recovered, one of each group was identified. Several marks were searched for outside compilation limits. None of these were identified. Form 685A has been submitted for all marks.

5. CONTOURS AND DRAINAGE

Contours are inapplicable. Drainage is principally run-off into the bays and rivers. The streams are self evident from the photographs. Parts of the area are being drained by cut ditches. These have been indicated on the photographs.

6. WOODLAND COVER

See Item 2, Paragraph 4. The woodland cover has been classified on the photographs.

7. SHORELINE AND ALONGSHORE FEATURES

The mean high-water line was thoroughly inspected and is usually obvious as photographed. In areas of doubt, it was located by measurements from identifiable points.

Apparent shoreline comprises a large percentage of the water front. It is usually the edge of dense mangrove. The mangrove varies in height from 5 to 50 or more feet. The growth appears on the photographs as a dense, black and usually smooth tone.

Marsh is negligible and is more often grass-in-water than true marsh.

The approximate low-water line has been indicated in some areas, which were visited during low water.

All bluffs worthy of being symbolized have been indicated on the photographs. There are no cliffs.

All docks, wharves, piers and landings have been indicated on the photographs.

The shore ends of submarine cables have been located and labeled on the photographs.

8. OFFSHORE FEATURES

The only offshore features are the dredging ranges and aids to navigation.

9. LANDMARKS AND AIDS

The area was thoroughly inspected for landmarks. Form 567 is being submitted for charting and deletion.

Aeronautical aids are adequately covered by Form 567.

All fixed aids to navigation were located during the course of field work. The aids of a permanent nature were located by triangulation.

The azimuths of these ranges were located by triangulation.

The aids of a secondary construction were located by one of the following methods.

(1) Graphic triangulation
(2) Theodolite cuts from identifiable points
(3) Sextant fixes with a check angle
(4) Direct identification on the photographs

The azimuths of these ranges were located by graphic triangulation.

10. BOUNDARIES, MONUMENTS AND LINES

Inapplicable

11. OTHER CONTROL

Numerous topographic stations established in 1941 were recovered and those within the mapping limits were identified. Several other recoverable topographic stations were established and identified by the field party for location by the radial plot. The spacing of two mile intervals was not held rigidly because of the nature of the terrain. The spacing was exceeded in some of the mangrove areas where it was obvious that the monument would have a short period of usefulness.

The following recoverable topographic stations were re-identified or established and identified:

Sheets of which no number is listed had no stations established.

Photo-hydro signals were selected and identified throughout the area. The signals were marked and described, briefly, to aid the hydrographer, except sheets T-10547, T-10552, T-10553, T-10556, T-10557, T-10559, T-10561, T-10562 and T-10565 where the signals were built then located by graphic triangulation.

12. OTHER INTERIOR FEATURES

Roads within the limits of inspection were classified according to project instructions.

Buildings were inspected and indicated according to project instructions.

Clearances were determined for bridges and cables over navigable waters:

OVERHEAD CABLE (POWER) HILLSBOROUGH RIVER - T-10546 - just west of North Boulevard bridge. 54 feet above MHW.

OVERHEAD CABLE (POWER) HILLSBOROUGH RIVER - T-10546 - 1.1 miles northwest of North Boulevard bridge. 60 feet above MHW.

OVERHEAD CABLE (POWER) MCKAY BAY - T-10547 - 42 feet above MHW.

OVERHEAD CABLE (POWER) LITTLE MANATEE RIVER - T-10562 - 4 miles upstream from U. S. 41 Bridge, 48 feet above MHW.

OVERHEAD CABLE (POWER) BETWEEN HIGHWAY AND RAILROAD BRIDGE, 48 feet above MHW - T-10562.

OVERHEAD CABLE (COMMUNICATION) 39 feet east of railroad bridge, 60 feet above MHW - T-10562.

OVERHEAD CABLE (POWER) ALAFIA RIVER - T-10557 - west of U. S. 41, 45 feet above MHW.

OVERHEAD CABLE (COMMUNICATION) between highway and railroad bridges, 29 feet above MHW - T-10557

Bridge clearances were determined as follows:

Some of the bridges have evidently been changed and not revised in the Bridge Book. The bridges over COFFEE POT BAYOU, PAPYS BAYOU and SMACKS BAYOU are listed as bascule but are now fixed.

Six airports are located within the project:

TAMPA INTERNATIONAL) are large facilities affording
PINELLAS COUNTY INTERNATIONAL) accommodations for all types of commercial aircraft.

MACDILL AIR FORCE BASE) is home for a wing of the Strategic Air Command

PETER O. KNIGHT) are primarily used by smaller
ALBERT WHITTED) private planes

MULLET KEY) landing strip for small light aircraft

13. GEOGRAPHIC NAMES

A systematic investigation of geographic names was not required. Only one discrepancy was noted during field operations. The name PALM RIVER is used locally for the lower part of the stream charted as SIX MILE CREEK. See enclosed copies of previous investigation and recommendations.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA

Planetable sheets TFU-A-57 through TFU-F-57 were forwarded to the Norfolk District Office on 21 May 1958.

15. GRAPHIC TRIANGULATION

Photographs were not available at the beginning of field operations. A scheme of triangulation (See Item 3) was run to locate aids to navigation and to provide control for graphic triangulation. Hydrographic signals and secondary aids to navigation were located on six metal mounted sheets. These sheets are located along Hillsboro and McKay Bays and are numbered TFU-A-57 through TFU-F-57.

Subject: Geographic Name, Recommended Change in.

It has been brought to my attention that a geographic name in the Tampa Bay area should probably be changed on our charts. An investigation reveals that the lower, tidal part of the stream called Sixmile Creek is known locally as Palm River. This stream empties into McKay Bay at Lat. 27°-56.5 N., Long. 82°- 24.7 W., and appears, in part, on charts 587 and 1257, on the TAMPA sheet 4559 IV NW, published by the Army Map Service, and on the MANGO QUADRANGLE topographic sheet published by the Corps of Engineers, U. S. Army. Below is a list of facts regarding this stream:

1. The highway bridge about 0.7 mile above the mouth is known as the Palm River Bridge, and is so shown on the TAMPA topographic sheet mentioned above.

2. The first road south of this stream, running roughly parallel to it, is known as, marked, and shown on the topographic sheet as Palm River Road.

3. The large new school serving this area is named Palm River School.

4. Several commercial establishments nearby include Palm River in their names.

5. Several residents of the locality were interviewed. All of them said that the waterway is called Palm River.

6. This name 'Palm River' is not applied to this stream where it is a narrow, fresh-water drainage stream. The residents of Orient and the settlement known as Sixmile Creek call that part of the stream in their vicinity 'Sixmile Creek'.

From my investigation, it is apparent that this stream is considered by all the local inhabitants to be two separate and distinct streams; that is, Palm River in the wider part, up to about the crossing of the Seaboard Air Line railroad track at about Lat. 27° - 57.3 N., and Sixmile Creek above that point. It is recommended that the charted names be thus changed in order to agree with local usage.

Arthur L. Marshall
Commander, USC&GS

Subject: Nine-lens photographs - Project 27380, Tampa Bay

Nine-lens photographs Nos. 55978 thru 56000 are very poor quality. The photographs will be satisfactory for radial plotting, if care is exercised in picking the passpoints. In areas of poor definition it is suggested that the infrared photographs be tied to the nine-lens plot for detailing the fogged areas.

We do not know the reason for the poor quality nine-lens photographs but believe it is a form of solarizing caused by exposure to light after developing started.

L. W. Swanson, Chief,
Photogrammetry Division

PHOTOGRAMMETRIC PLOT REPORT

21. AREA COVERED

A continuous radial plot was run for all of Ph-171(57) and extended into Ph-100(52) to check the junction and provide photo-hydro control in the northern part of Ph-100(52).

The sketch on page 22 of this report shows the maps, the identified control, index of control, centers of photographs used and the extent to which this plot overlapped Ph-100(52).

22. METHOD

Radial Plot:

Map manuscripts: The map projections, on vinylite, are 3'45" in latitude and longitude with the exception of T-10659, T-10660 and T-10665 which are 3'45" in latitude and 4'15" in longitude.

The base grids used for laying the plot were vinylite with the 5000 feet interval at 1:10,000 scale.

Photographs: The nine-lens photographs furnished for the plot were satisfactory with the exception of photographs 55978 through 56000 which had fogged areas (see accompanying letter from Chief Division of Photogrammetry.) It was not necessary to use the single-lens ratio photographs. The photographs used were: 55865 through 56104 with breaks for the flight lines (see sketch.)

Templets: Vinylite templets were made from all the photographs using master templet 53605 (1956-1957) for correction of transforming errors and paper distortion.

Closure and Adjustment: The plot was run in groups of maps and conventional methods were used. No unusual problems were encountered and all control was held.

The plot joined Ph-100(52) on the south and was extended into that project (see shaded area on sketch) to give the hydrographer new signals and show shoreline changes.

Fourteen pass points common to Ph-100(52) were independently located and positions compared to provide a check. The maximum discrepancy was 0.2 mm with 10 points exactly common.

23. ADEQUACY OF CONTROL

The control was adequate and all positively identified control was held.

Some of the fixed aids to navigation in Tampa and Hillsborough Bays were located by radial plot before they were located by triangulation. Very good checks were obtained.

24. SUPPLEMENTAL DATA

None.

25. PHOTOGRAPHY

The nine-lens photographs taken on 9 and 16 April 1957 at about 1:10,000 scale has satisfactory coverage despite the flogged areas mentioned in Item 22 under Photographs. With the exception of the flogged areas the photographs were sharp and of good contrast.

Single lens infra-red photographs, Camera L, were taken at 1:20,000 scale on 16 April 1957 with coverage of the shoreline. Two diameter enlargements were furnished this office and although not used for the plot, two of the photographs covering Egmont Key on T-10566 were located for the compiler.

Pass points and photo-centers for this project are shown on the maps in blue; Pass points common with Ph-100(52) on T-9631, T-11079 and T-11080 have red circles inside the blue circles carried over from the Ph-100 plot. 1958 pass points on these three maps are shown with 0.6 mm red circles.

26. GENERAL

Date of completion of the photogrammetric plot by maps are as follows:

T-10546, 10547, 10552 and 10553	on 30 June 1957
T-10561, 10562 and 10565	7 August 1957
T-10559	12 August 1957
T-10557	13 August 1957
T-10556	14 August 1957
T-10555	23 September 1957
T-10550 and T-10554	25 September 1957
T-10558	30 September 1957
T-10560	1 October 1957
T-10542 and T-10543	19 November 1957
T-10548 and T-10549	20 November 1957
T-10544, T-10545 and T-10551	27 November 1957
T-10563 and T-10566	20 February 1958
T-10567	21 February 1958
T-10564 and T-10568	15 April 1958
Extension into Ph-100(52)	16 April 1958

COMPILATION REPORT T-10558

31. DELINEATION

Compiled graphically. Photography was good. Inspection was adequate.

32. CONTROL

See photogrammetric plot report.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

The drainage was delineated as shown on the photographs and according to field inspection.

Contours are inapplicable.

35. SHORELINE AND ALONGSHORE DETAILS

There are numerous piers, boat houses and harbors along the entire shoreline. The shoreline, except for occasional short stretches of high-waterline, is of seawall construction, and the inspection was adequate. All the alongshore details have been delineated according to field inspection notations. Where visible on the photographs, channels and shallow areas have been delineated. No low-water or shoal lines were indicated by the field inspector.

36. OFFSHORE DETAILS

Offshore details such as piling, etc. have been delineated as indicated by the field inspector. Offshore piling were located from sextant fixes.

37. LANDMARKS AND AIDS

Both Landmarks and Aids to Navigation are listed with proper descriptions on Form 567, submitted to the Washington Office 1 May 1958.

38. CONTROL FOR FUTURE SURVEYS

All recoverable topographic stations and photo-hydro. stations with a short description o f the latter have been listed under Item 49.

All recoverable topographic stations are being submitted herewith on Form 524.

39. JUNCTIONS

A satisfactory junction has been obtained with T-10554 on the north and T-10560 on the south. There is no contemporary survey to the east or west.

40. HORIZONTAL AND VERTICAL ACCURACY

No statement required.

46. COMPARISON WITH EXISTING MAPS

Comparison has been made with film positives of Geological Survey stereocompilation map manuscripts St. Petersburg Florida 730009 sheet No.2 and Port Tampa Florida 739009, sheet No.2. They are both of 1:10,000 scale and compiled in 1955. There are no discrepancies worthy of note.

A comparison was made with C&GS planimetric map No. T-5830, scale 1:10,000 compiled from air photographs taken Dec. 8, 1939 and supplemented by other surveys to October 1941. Generally, the outer shoreline has undergone little changes except in the vicinity of Smacks Bayou where considerable new filling has taken place. Also the fill at Albert Whitted Airport has been extended seawardly.

47. COMPARISON WITH NAUTICAL CHARTS

A comparison was made with Nautical Chart No.587 scale 1:40,000, 9th edition 14 August 1943 and revised to 20 April 1957.

The same descrepancies noted under Item 46 exist.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

49. NOTES FOR THE HYDROGRAPHER

The following is a list of photo-hydro and topographic stations for the use of the hydrographer:

(Note 1A - Stake, painted white on top, with flag)

5801 - Offshore end of pier east of blue-green house with white barrel tile roof.

5802 - SE gable of red roofed boat shed.

5803 - SE corner of "T" shaped pier.

5804 - Lone palm at point.

5805 - W end of white concrete block fence, with 3 concrete steps directly in front of fence.

5806 - SW corner of "T" shaped green pier.

5807 - SW corner of "L" shaped pier.

5808 - Offshore end of pier in poor repair.

5809 - Center of offshore clump of mangrove on oyster bar. Note 1-A

5810 - Steel bar in center of turntable gear 3' above MHW.

5815 - NE corner of "L" shaped red pier.

5816 - Lone palm.

5817 - SE corner of roof atop two-story white building.

5818 - Offshore end of pier.

5819 - Offshore end of pier.

5820 - Offshore end of pier.

5821 - Low mangrove jutting out from embankment, but not connected to it. Note 1 -A

5822 - The most southeasterly of two tall palms. (about 50' tall)

5823 - Corner of concrete seawall.

5824 - Offshore end of pier with gate and boat hoist.

5825 - South tip of offshore mangrove clump. Note 1 A

5826 - North tip of offshore mangrove clump. Note 1 -A

5827 - NE corner of large building.

5828 - Small steeple St. Thomas Church.

5829 - End of Pier.

5830 - Corner L shaped Pier.

5831 - East end T shaped Pier.

5832 - NE end of T shaped Pier.

5833 - End of Pier.

5834 - SW corner of Pier.

5835 - SW corner of Pier.

5836 - End of Pier.

5837 - NE corner L shaped Pier.

5838 - End of Pier.

5839 - End of Pier.

5840 - End of Pier.

5841 - Center of face of Pier.

5842 - End of Pier.

5843 - SW corner Pier.

5844 - Peak of roof on small boat shed.

5845 - End of Pier.

5846 - SW corner of Pier.

5847 - End of Pier.

5848 - SW corner Pier.

5849 - End of Pier.

5850 - NW corner of Pier.

5851 - End of Pier.

5852 - SE corner of Pier.

5853 - SE end T shaped Pier.

5854 - End of Pier.

5855 - End of Pier.

5856 - End of Pier.

5857 - End of Pier.

5858 - End of Southerly side, of U shaped Pier.

5859 - End of Pier.

5860 - NW corner of concrete pier with steps.

5861 - End of Pier.

5862 - Corner of L shaped pier.

5863 - End of Pier.

5864 - Center line intersection of walks.

5865 - Northerly of 2 Palm bushes.

5866 - Center of isolated clump of bushes.

5867 - Northerly of 4 Palm bushes.

5868 - Southerly of 3 Palm bushes.

5869 - Outside angle at change in seawall construction from slanting to vertical.

5870 - End of Pier.

5871 - End of Pier.

5872 - End of Pier.

5873 - North peak of southerly of two sheds on beach.

5874 - Peak of roof, small building on NW corner of Pier.

5875 - Peak of roof, small building on SW corner of Pier.

5876 - Largest ventilator on building.

5877 - End of Pier.

5878 - Weather Vane atop Dock Masters Office.

5879 - End of Pier.

5880 - NE peak of roof on shed.

5881 - End of Pier.

5882 - End of Seawall.

5883 - End of Seawall.

5884 - Peak of top of tank.

5885 - End of Seawall.

5886 - SW corner boat-shed.

5887 - South gable east end of warehouse.

5888 - Point of steel bulkhead.

5889 - Corner of bulkhead.

5890 - End of Pier.

5891 - End of Pier.

5892 - Corner of bulkhead.

5893 - Corner of bulkhead.

5894 - End of bulkhead.

5895 - North gable boat-shed.

5896 - East gable large building.

5897 - Corner of bulkhead.

5898 - Center of Face of Pier.

5899 - Sunken cable spool.

T-5839	1:10,000	1939	
T-8385	1:20,000	1942	
T-8386	1:20,000	1942	
T-8387	1:20,000	1942	

The area covered by subject surveys changes constantly, particularly the shoreline in the vicinity of St. Petersburg. Subject surveys are to supersede above-listed registered surveys of common area and detailing for nautical charting purposes.

63. Comparison with Maps of Other Agencies

ST. PETERSBURG, FLA., 1:24,000, 1956, U.S. Geological Survey
PORT TAMPA, FLA., 1:24,000, 1956, U.S. Geological Survey
GIBSONTON, FLA., 1:24,000, 1956, U.S. Geological Survey

Only minor shoreline differences were noted in this comparison.

64. Comparison with Contemporary Hydrographic Surveys

Blueprint 57519, 1:10,000 (with St. Petersburg Harbor Inset at 1:5,000), 1958
H-8411, 1:10,000, 1957

Advance information of subject surveys was made available for these hydrographic surveys and there is good agreement.

65. Comparison with Nautical Charts

587, 1:40,000, (with Inset of St. Petersburg Harbor at 1:10,000), Ed. of 1958, Revised to 7/6/59
1257, 1:80,000, Edition of 1943, Revised to 3/2/59

With two exceptions there is good agreement with subject surveys and the two listed nautical charts. The two exceptions are:

1.) At the entrance of the Central Yacht Basin of St. Petersburg Harbor the shoreline and position of one light differ considerably. This represents a recent change and this information was made available to the Nautical Chart Branch after T-10558 had been compiled.

2.) The two listed nautical charts fail to show islands south of Hillsboro Channel Range Front Lights (Cuts "A" and "C"). These islands appear on T-10559 and hydrographic survey 8411.

66. Adequacy of Results and Future Surveys

T-10558 and T-10559 meet the requirement of adequacy and accuracy. Though adequate and accurate as of 1957, there are sufficient indications of the need of more frequent surveys in the future, than of those intervals evidenced by previous surveys.
