COMPILATION REPORT T-10976

Radial Plot and Stereo Bridge reports submitted with T-10928.

31. DELINEATION

Most of the area was compiled by Kelsh Plotter. Approximately 1/2 minute along the north and south limits was delineated by graphic method, this part not being covered by the Kelsh plates. No unusual problems were encountered.

The field inspection was adequate.

32. CONTROL

See Photogrammetric Plot Reports.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

Contours are inapplicable.

The drainage was delineated by the field inspector, but when some of the delineation was disproved by the details on other photographs, particularly in the swamps, all the drainage that could not be seen was doubted. Only the drainage identified by stereoscopic examination has been shown. Please refer to the letter dated 10 October 1960 on DRAINAGE, Ph-5704 to Chief, Photogrammetry Division from Tampa District Officer for more information about this.

35. SHORELINE AND ALONGSHORE DETAILS

The shoreline and shoreline details were delineated according to the field inspection which was adequate. No low-water or shoal lines were shown.

36. OFFSHORE DETAILS

None.

Tampa District Office P. O. Box 190 Tampa 1 Florida

10 October 1960

To:

Chief, Photogrammetry Division Coast and Geodetic Survey Washington, D. C.

Subject:

Drainage - PH-5704 MOBILE BAY

The greater portion of the drainage in subject project consists of narrow fingers of swamp (500-1500 Ft. wide) with a perennial stream meandering through the swamp. The field inspector has complied with project instructions by delineating this drainage on the field photographs. Due to the density of the swamp trees, it is impossible to see the stream beds except for occasional short stretches.

We have carefully examined all the streams under the stereoscope on various office photographs. Comparison with the U. S. Geological Survey quadrangles indicates their drainage delineation to be more accurate than our field party's delineation. (Reference copy of memorandum to Wilson attached). One sample area has been returned to the field party and our conclusions were verified for that one particular stream.

We do not believe the streams warrant the expense of the field party traversing them for accurate location, neither do we believe that they should be mapped unless their position is fairly accurate. It appears that this drainage has been delineated on the field photographs without an adequate check with U.S.G.S. quadrangles and/or actual field investigation even though considerable time was probably spent on this phase of the field work. Considerable time has also been spent studying these discrepancies in the office.

It is suggested that the field parties be informed of a definite policy on how much time should be spent on accurately locating drainage, omitting it entirely, or using P.D.U.

On this project, since the narrow fingers of swamp indicate the drainage pattern fairly well, and the streams can be identified only in short stretches, we are omitting them as a whole.

Survey T-10938 is being scribed and will be forwarded in approximately four (4) weeks. The foregoing discrepancies will be noted on various field photographs for your attention.

It is thought that bringing this matter to your attention might eliminate similar difficulties in future projects.

(signed) William R. Kachel LCTR, C&GS Tampa District Officer

37. LANDMARKS AND AIDS

There are no landmarks.

Two non-floating aids were located and submitted on Form 567 under date of 18 October 1960. A revised position for one of these was forwarded on 22 November 1960.

38. CONTROL FOR FUTURE SURVEYS

None.

39. JUNCTIONS

Satisfactory junctions were made with the following:

T-10974 to the north
T-10975 to the west
T-10978 to the south
There is no contemporary survey to the east. This survey lies within the northeast quarter of the
1:24,000 scale HURRICANE, ALA. quadrangle. Principal details along the east limits are in good agreement.

40. HORIZONTAL AND VERTICAL ACCURACY

No statement.

46. COMPARISON WITH EXISTING MAPS

Comparison has been made with the Geological Survey quadrangle HURRICANE, ALA., scale 1:24,000, revised to 1953.

Comparison was made with Planimetric Map No. T-5530, scale 1:20,000, dated 1934.

The comparison was favorable except for man-made changes and those due to the passage of time.

47. COMPARISON WITH NAUTICAL CHARTS

Comparison has been made with Nautical Chart No. 1266, scale 1:80,000, edition of 16 November 1959, corrected to 23 July 1960. The maps listed under item 46 were probably in part the source of the topography for this chart and the same differences exist.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

Webber W. Dawsey Cartographer (Photo)

V. Kalph Sobieralski Tampa District Officer

48. GEOGRAPHIC NAME LIST

Names were taken from Chart 1266, map T-5530 and USGS quadrangle HURRICANE, ALA. There were no conflicts among the sources used.

Field Edit Report (Shoreline) Quadrangles T-10928, T-10973, T-10974, T-10975, T-10976, T-10977, T-10978, T-10981.

51. Methods

The shoreline was inspected by truck and skiff. The distance to the MHWL was spot checked at intervals from points of known location and found to be correct and adequate, except where noted on the ozalid copies of the map manuscripts and the photographs.

Corrections and additions to the manuscript have been noted on the field edit sheets in red and on the photographs in purple. Deletions are shown in green.

Field edit information has been shown on field edit sheets for T-10928, T-10973, T-10974, T-10975, T-10976, T=10977, T-1097°, T-10981; on nine lens photographs 56891, 56893, 56948, 56950, 56954, 56959, 56971, 57012, 57013; nine lens office print 56959.

52. Adequacy of Compilation.

The map compilation appears complete end adequate with the exception to the corrections and additions as shown on the ozalid field edit sheets.

53. Map accuracy.

The accuracy of the map compilation appears to be complete and adequate.

54 Recommendations:

There are no recommendations.

55. Examination of Proof Copy.

No one was contacted to examine a proof copy of the map.

LIJG C&GS

Photo Hydro Suprort Unit 721

Review Report Planimetric Maps T-10973 thru T-10980 November 1965

61. General Statement

Area - The project encompasses Mobile Bay and its approaches.

<u>Purpose</u> - The object of this project is to provide base maps for nautical charting and shoreline and horizontal control data for hydrographic surveys.

62. Comparison with Registered Topographic Surveys

T-3713 1:40,000 1918 T-5530 1:20,000 1934

Cultural and shoreline changes have been continuous. These maps are to supersede the above surveys for common area for nautical charting. Also see Item 46.

63. Comparison with Maps of Other Agencies

Bay Minette	i	į	1:62,500			1941
Hurricane			1:24,000	,		1953
Bridgehead	ŗ	,	1:24,000		•	1953

See Item 46.

64. Comparison with Contemporary Hydrographic Surveys

** 0=00	7 70 000	-06-
н-8588	1:10,000	1961
н-8589	1:10,000	1961
н-8590	1:10,000	1961
н-8591	1:10,000	1961

Shoreline and control of subject surveys was furnished to the hydrographic surveys and apparently no diff. rence of importance exists.

65. Comparison with Nautical Charts

1:80,000/

Because of the scale difference only a visual comparison was made. No notable differences exist.

66. Adequacy of Results and Future Surveys

These surveys were prepared according to project instructions and are within the required accuracy for nautical charting.
