PHOTOGRAMMETRIC PLOT REPORT
Project Ph-40
Surveys T-11094, 11563 and 11571

21. AREA COVERED

This radial plot covers the areas of surveys T-11094, T-11563 and T-11571. These are shoreline surveys of Herendeen Bay near Port Moller, Alaska.

22. METHOD - RADIAL PLOT

Map Manuscripts:

Vinylite sheets, with polyconic projections in black and U.T.M., Alaska, grid in red, at a scale of 1:20,000, were furnished by the Washington office.

All control stations and substitute stations were plotted using the beam compass and meter bar.

A sketch, showing the layout of surveys, distribution of control, and photograph centers, is attached to this report.

Photographs:

The following eleven (11) nine-lens photographs, scale, 1:20,000 were used in this radial plot: 11271, 14197, 14199, 45931 thru 45934 and 45950 thru 45953.

Templets:

Vinylite templets were made from all 1954 photographs using a master templet to correct for errors due to film and paper distortion. Uncorrected templets were made from photographs 11271, 14197, and 14199.

Closure and Adjustment to Control:

The radial plot was constructed on vinylite base sheets on which all control points had been transferred from the map manuscripts.

The radial plot was started in survey T-11094 where there was adequate control and extended southwestward using both flights of 1954, photographs. The uncorrected templets were then adjusted. The northern portion of the plot presented no difficulties. The uncorrected templets made considerable adjustment necessary in the southeast portion of the plot along the junction between surveys T-11563 and T-11571. Unadjusted templets of photographs 11271, 14197, and 14199 were fixed by holding to pass points established from the 1954 photographs. Positions of additional pass points established were checked using the photographs and orienting chamber by chamber. This method produced a satisfactory plot which held all control.

Transfer of Points:

The map manuscripts were laid over the completed radial plot and after adjusting to control all photogrammetric points were pricked on the manuscripts.

23. ADEQUACY OF CONTROL

The control identified was adequate for obtaining a satisfactory radial plot.

24. SUPPLEMENTAL DATA

No supplemental data was used in the radial plot.

25. PHOTOGRAPHY

The photographic coverage was adequate for all surveys of this radial plot. Three (3) photographs were used that had no fiducial marks. There was no master templet to correct for errors due to paper and film distortion of these photographs.

Photograph 45952 was tilted, but no tilt determination was necessary.

Respectfully submitted
25 February 1955

COMPILATION REPORT
Project Ph-40
Surveys T-11094,
T-11563 & T-11571

A 1953 Descriptive Report is available for delineation done that year.

For the field report, refer to Project Report, Aerial Photograph Control and Inspection, North Shore, Alaska Peninsula, Project Ph-40 (49), June - September, 1950.

31. DELINEATION

Graphic methods were used to delineate the map manuscripts.

The 1955 work comprises all shoreline and offshore details from 1 mile south of HAGUE, 1950 to one and one-half miles south of OSGOOD, 1950 on T-11094 and all of T-11563 and T-11571.

32. CONTROL

See Photogrammetric Plot Report.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

Contours: not applicable.
Drainage: not comment.

35. SHORELINE AND ALONGSHORE DETAILS

The shoreline inspection was adequate.

The MHWL was delineated in the field on 1942-43 nine-lens photos. This information was utilized to delineate the MHWL on 1954 nine-lens photos. An approximate low water line was delineated using the latest low water photos available. No MLLW lines were furnished by the field party.

36. OFFSHORE DETAILS

No comment.

37. LANDMARKS AND AIDS

A Form 567 is being submitted for eight landmarks recommended by the field party.

37. LANDMARKS AND AIDS (cont'd)

38. CONTROL FOR FUTURE SURVEYS

See paragraph No. 49 for a list of recoverable Topographic Stations and Hydrographic Stations in the area.

Form 524 for station MINE, 1954 was prepared by the field party. Form 524 is submitted for OZGOOD AZ. MK., 1950.

39. JUNCTIONS

Junctions are in agreement between these manuscripts. In addition junction for T-11094 was made with T-11092 to the north and T-11093 to the west. There were no other junctions to be made.

Survey T-11571 overlaps survey T-8837 (Ph-111). However, only the shoreline of Herendeen Bay is required at this time.

40. HORIZONTAL AND VERTICAL ACCURACY

See Photogrammetric Plot Report.

41. - 45. Inapplicable.

46. COMPARISON WITH EXISTING MAPS

None available in the office at the time of compilation.

47. COMPARISON WITH NAUTICAL CHARTS

These manuscripts have been compared with Nautical Chart No. 8833, 1:79, 798 published Feb. 1917, and corrected to 6/11/54.

Items to be applied to Nautical Charts immediately: None.

Items to be carried forward: None.

49. NOTES FOR HYDROGRAPHER

The following are the recoverable topographic stations established:

T-11094

MINE, 1950
OSGOOD AZ. MK., 1950

The following are the hydrographic stations located on the manuscripts:

T-11094

218 Cabin; SW Gable of Cabin.
219 Cabin; S Gable of main cabin in group of Small Bldgs.
225 Cabin; S Gable of 2nd building E. of Low Point.

T-11563

220 Cabin; NW Gable of cabin.
221 Cannery; NE Gable of N'erly building on Pier.
222 Cannery; NE Gable of S'erly building on Pier.
223 W gable of lone cabin.

T-11571

224 Cabin; S. Gable of 2nd building E of low point.

The character of the foreshore areas adjacent to the MHWL has been designated where available from the field inspection. In most cases the limits of the areas were not delineated because of extensive mud flats which bare at MLLW.

Pass points have been selected every 3 inches along shoreline to facilitate the location of photo hydro stations, and in compliance with project instructions.

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and *nonfloating aids* to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.

Review Report of Shoreline Surveys
T-11091, 11092, 11094, 11095, 11096, 9573, 11563, 11571
(see accompanying Index with T-11091)
May 1957

62. Comparison with Registered Topographic Surveys

T-3089 1:20000 1910

Shoreline and foreshore features have changed considerably since this survey of 1910 and is superceded by T-9573 of common areas for Nautical charting purposes.

63. Comparison with Maps of Other Agencies:

PORT MOLLER, ALASKA 1:250000 1953 U.S. Geological Survey. Agreement is as good as scale differences permit.

64. Comparison with Contemporary Hydrographic Surveys:

H-8224	1:20000	1955
H-8225	1:20000	1955
H-8226	1:20000	1955
H-8227	1:20000	1955
H-8228	1:20000	1955

Subject Shoreline Surveys furnished shoreline, foreshore and offshore detailing for afore-mentioned hydrographic surveys prior to review. Only limits of shallow and shoal limits were altered in some instances to fit the hydrographic information. A few additions and changes were applied to the shoreline manuscripts during review; however, these did not interfere with corresponding hydrographic surveys or were resolved.

65. Comparison with Nautical Charts:

8833 1:80000 1956 (30 April)

For the fifth Edition of this nautical chart subject shoreline manuscripts were used in it's recompilation and there is complete agreement except for scale.

66. Adequacy of Results and Future Surveys:

Control and Field Inspection for these shoreline surveys are adequate also for nautical chart purposes. No inaccuracies were indicated.

Summary to accompany Shoreline Surveys
T-11091, 11092, 11094, 11095, 11096, 9573, 11563, 11571

These eight shoreline surveys are in the vicinity of Port Moller, Bristol Bay, Alaska, and represent the southernmost portion of Project 25020—Fh 40—(below 56° of latitude). The accompanying index shows with T-11091 the subject shoreline surveys also in relation to adjoining Project 27160. Limits of T-11096 and T-11571 were changed with effected sheets of Project 27160 to form common junctions. A small portion of shoreline and adjacent marsh area in the northeast corner of T-11093 represented all detailing on that manuscript. This information was transferred to T-11094 and T-11093 has been dropped.

Final "Cronar" film positives of these manuscripts as well as the descriptive report will be filed in the Bureau Archives.
