DATA RECORD

T - 11535, T-11536

Project No. (II): PH-34

Quadrangle Name (IV):

Field Office (II): Ship PIONEER

Chief of Party: W. H. Bainbridge

Photogrammetric Office (III): Washington, D. C.

Officer-in-Charge: L. W. Swanson

Instructions dated (II) (III):

Project Instructions 16 Dec. 1954

Supplemental Instructions 10 Nov. 1955

Supplemental Instructions 1 Oct. 1956

Compilation Instructions 5 Nov. 1957

Copy filed in Division of
Photogrammetry (IV)

Office files

Method of Compilation (III): Graphic

Contours: Reading Nine-Lens Plotter
Stereoscopic Plotting Instrument Scale (III): 1:20,000

Manuscript Scale (III): 1:20,000

Scale Factor (III): 1.0

Date received in Washington Office (IV):

Date reported to Nautical Chart Branch (IV):

Applied to Chart No.

Date:

Date registered (IV):

Publication Scale (IV):

Publication date (IV):

Geographic Datum (III): N.A. 1927

Vertical Datum (III):

Mean sea level except as follows:

Elevations shown as (25) refer to mean high water

Elevations shown as (5) refer to sounding datum

i.e., mean low water or mean lower low water

Reference Station (III):

Lat.:

Long.:

Adjusted
Unadjusted

Plane Coordinates (IV): UTM

State: Alaska

Zone: 1 and 2

Aleutian Islands ALASKA Part C

Summary to Accompany Descriptive Report
T-11535 and T-11536

Topographic maps T-11535 and T-11536 are two maps covering a part of PH-34, Part C, Andreanof Island group, Aleutian Islands, Alaska. These two maps cover the area of Atka Island from latitude $52^{\circ} 07' 30''$ to latitude $52^{\circ} 15'$ and from longitude $174^{\circ} 00'$ to longitude $174^{\circ} 20'$. The westerly map, T-11535, includes Nazan Bay, Atka, Korovin Bay and the easterly map, T-11536, includes the NW end of Amlia Island, Nazan Bay and Cape Kudugnak on Atka Island.

The field operations preceding compilation were limited to the recovery of horizontal control and the determination of elevations to control the nine-lens stereoplotter project vertically. The few field inspection notes were restricted to general descriptions of foreshore and beach characteristics.

The nine-lens compilation of contours was preceded by a graphic compilation of shoreline, foreshore and offshore features for hydrographic survey needs based on the field recovery of horizontal control with little or no field inspection of shoreline and related features.

Contours were compiled, for the most part, on the Reading nine-lens stereoplotter. Several areas on T-11535 and T-11536 that were left uncontoured after the dismantling of the last or second Reading nine-lens stereoplotter were completed on the Wild A-7 Autograph. The contour interval is 50 feet with a first 25-foot contour where contour spacing permitted and better expression of near shore terrain configuration could be obtained.

The registered copies under T-11535 and T-11536 will consist of one cronaflex positive of each of the two maps and a single combined Descriptive Report.

PHOTOGRAMMETRIC PLOT REPORT

This report covers the plot for surveys T-11533 through T-11536 and T-11544 through T-11547. It is filed as part of the Descriptive Report for T-11533.

COMPILATION REPORT
T-11535 and T-11536

31. Delineation

Shoreline and alongshore areas were delineated by stereoscopic examination of nine-lens photographs taken in 1953 and 1954. Field inspection was not available for any portion of this survey. Prior surveys were used as a general guide in the interpretation of features. Single-lens photographs taken in 1951 were used to aid in shoreline interpretation.

32. Control

Control for this survey was furnished by a radial plot. The report for this plot is filed as part of the Descriptive Report for T-11533. Control is considered adequate.

33. Supplemental Data

T-4875	1:20,000	1934
T-6208	1:5,000	1934
T-6209	1:20,000	1934
T-6950	1:10,000	1934

These surveys were used only to aid in the interpretation of shoreline features.

✓ 34. Contours and Drainage

Sufficient field determined elevations combined with water level datum were available to control the vertical datum for compilation of contours.

* 35. Shoreline and Alongshore Features

Shoreline and alongshore details are office interpreted with the exception of the area of shoreline bordering Nazan Bay from the vicinity of Atka to the long pier west of Palisades Point. Some shoreline inspection was done in Korovin Bay across the island and northwest of Nazan Bay. Field inspection was done on Navy metrogon photography of 7/21/51.

36. Offshore Details

Offshore details are quite numerous on both surveys T-11535 and T-11536. These details include features such as rocks awash, reefs and numerous small islets.

2

39. Junctions

North T-11530, T-11531
East T-9886
South T-11546, T-11547
West T-11534

40. Horizontal and Vertical Accuracy

No deficiencies were indicated.

46. Comparison with Existing Maps

Plane table surveys T-6209 and T-6950 are in general agreement. Some features were in shadows or breakers and could not be seen clearly on the photographs.

47. Comparison with Nautical Charts

Chart No. 8862	1:300,000, 1st edition, corr. 10/15/51
9010	1:20,000, 1st edition, corr. 9/3/51
9136	1:10,000, 1st edition, corr. 1943.

Items to be Applied to Nautical Charts Immediately: None

Items to be Carried Forward: None

REVIEW REPORT
T-11535 and T-11536
Topographic Maps
September 1971

61. General Statement

Graphic compilation of shoreline was completed in 1957 to fulfill hydrographic survey needs. This shoreline compilation was followed by a separate contouring operation done on the Reading nine-lens in 1960. Several small areas not completed on the nine-lens plotter were completed in 1969 on the Wild A-7 Autograph stereoplotter. This procedure was made necessary because the last of the two Reading nine-lens stereoplotters had been dismantled in 1965. Use of the A-7 stereoplotter was made possible by the photographic reduction of the nine-lens photographs to accommodate the 9 x 9 inch format of the A-7.

62 through 65. Comparison with Other Surveys

The two maps were compared with all prior registered topographic surveys, maps of other agencies, contemporary hydrographic surveys and nautical charts during compilation. Discrepancies and conflicts between the map manuscript and the prior surveys were resolved at the time comparisons were made.

66. Adequacy of Results and Future Surveys

Shoreline and related features, including contours, are considered to be delineated adequately, although field work was limited almost entirely to photoidentification of horizontal and vertical control.
