COMPILATION REPORT

T 11553 & T 11554

The field inspection report is filed with the descriptive report for T-11328.

The radial plot report is filed with the descriptive report for T-11327.

These manuscripts were compiled as "incomplete" in February 1956. The shoreline was revised after shoreline inspection and additional field inspection in November 1956.

31. Delineation:

Shoreline detail was delineated graphically from stereo models on to vinylite work sheets which were adjusted to the manuscript between common pass points. The contours and drainage were delineated on to the advance shoreline manuscript using the Reading Nine Lens plotters.

32. Control:

See the radial plot report for discussion of horizontal control. Two additional control points, (Bumpy 1956 and Moss 1956), which were identified in 1956 were pricked on the office photos and used to verify the existing plot. No datum shift was noted.

All vertical control points which were located and computed in the field were held while orienting the stereo models on the instrument. Inasmuch as there was a plethora of sea level control several of the unchecked and uncomputed field control ^{were} ~~was~~ not used.

33. Supplemental Data:

Boat sheets Ex 2256 - b & c.

34. Contours and Drainage:

There are no areas of questionable accuracy.

35 & 36. Shoreline, Alongshore and Offshore Details:

Due to the large amount of overhang and dense shadow some portions of the shoreline were dashed during graphic compilation. These areas were re-examined during the instrument compilation and where the delineation of the shoreline could be verified it was changed to a solid line.

37. Landmarks and Aids:

None

38. Control for Future Suveys:

No topographic stations were *established*.

39. Junction:

Junction was made with all adjoining sheets.

40. Horizontal and Vertical Accuracy:

See radial plot report for discussion of horizontal accuracy.
See paragraph 32 for discussion of vertical accuracy.

46. Comparison with Existing Maps:

T-6940

47. Comparison with Nautical Charts:

No. 9140 1:30,000 scale corrected to 2/25/52

Items to be Applied to Nautical Charts immediately: none

Items to be Carried Forward: none

Review Report of
Topographic Maps T-11553 and T-11554
October 1957

62. Comparison with Registered Topographic Surveys:

T-6940 USN 1:40,000 1934

Differences exist between these surveys--generally in the main shoreline, shapes of some islands and the omission of others. The two subject topographic surveys are to supersede T-6940 for nautical charting purposes for common areas.

63. Comparison with Maps of Other Agencies:

Adak, Alaska and Atka, Alaska of Alaska Reconnaissance Topographic Series of 1951 and 1952 by the U. S. Geological Survey at scale of 1:250,000.

The considerable difference in scale does not permit a conclusive comparison.

64. Comparison with Contemporary Hydrographic Surveys:

H-8307 1:20,000 1956

Preliminary shoreline of the two topographic surveys was furnished for hydrographic survey H-8307. Changes and additions resulting from subsequent field inspection and final Washington Office review have yet to be applied to the affected hydrographic survey. These corrections do not appear to interfere with the hydrographic information.

65. Comparison with Nautical Charts:

9140	1:30,000	Corrected to 52	2/25
9193	1:120,000	June 1957	

There are no major discrepancies, though reprinting of these nautical charts may at the discretion of the Nautical Chart Branch incorporate some or all of these changes.

66. Adequacy of Results and Future Surveys:

Field inspection of shoreline is incomplete and does not include the interior, except for control. However, field inspection appeared adequate. Some detailing as accomplished by office interpretation only may be subject to error and indicate the only cause of deficiencies in accuracy and adequacy.

Summary
To Accompany Topographic Maps
T-11553 and T-11554

The two subject topographic surveys cover the area from Cape Chisak of Little Tanaga Island eastward to Anagaksik Island. It is part of the Andreanof Islands chain of the Aleutians in Alaska.

Compiled originally as preliminary shoreline surveys in 1955 from 1953 nine-lens photography in support of the hydrographic party, they were revised in 1956 after 1956 season field inspection. In 1957 the two surveys were completed on the Reading Nine-lens Plotter as topographic maps.

They will be published by the Army Map Service as standard topographic quadrangles at scale of 1:25,000 with the addition of hydrographic information.

A "Cronar" film positive at manuscript scale of 1:20,000 and the descriptive report as well as a cloth-backed printed copy in colors after final printing by AMS, will be registered and filed in the Bureau Archives.

NAUTICAL CHARTS BRANCH

SURVEY NO. T. 11553

Record of Application to Charts

[illegible]

M-2168-1

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
