Field Inspection Report

PH-6009

Chesapeake Bay-West Shore-Maryland

2. Areal field inspection

The area included in these sheets consists of hilly terrain, wooded areas, and housing developments. The shoreline consists mainly of sand and a few small marsh areæ and several small bluffs. This report covers sheets T-11801 and T-11802.

Water traffic in the two Rivers is very heavy in the summertime with various pleasure craft. There are numerous piers along the shores of both Rivers.

The contact prints were dark in tone, while the ratio prints were contained a lot of glare in some areas which made the pricking of fixed aids very difficult. Shoreline and interior inspection was difficult in some areas due to the large amount of overhang from the trees. Much of the field inspection had to be done under extreme snow and frozen conditions.

3. Horizontal Control

All horizontal control requirements were met. The data for this phase of the Project has been previously submitted.

The following stations were reported as "lost" on Form 526.

CEDAR, 1903 BLANK 2, 1943 SHARP 2, 1934 CYP, 1933 TWO STORY PAGODA, 1933 1G, 1944 JACQUELINE, 1932 WEEMS, 1903 BAY, 1903 CHAPMAN, 1934 HIGH (M.S.F.C.), 1903 SWAN, 1903 ROUND, 1903 BREWER (M.S.F.C.), 1903 BREWER, 1906 CHASE (M.S.F.C.), 1903 ISLAND R.M. (M.S.F.C.), 1906 LONG (M.S.F.C.), 1903

4. Vertical control

Contours - Not Applicable

There are no T.B.M.'s on these two sheets.

5. Contours and drainage

Contours - Not Applicable

Drainage was field inspected at all road intersections. The rest of the drainage was delineated on the photos under the stereoscope when it was clearly visible. Most of the drainage was quite distinguishable. Swamp and marsh areas were outlined in red on the photographs.

6. Woodland cover

Woodland cover was delineated on the photos per instructions.

- 7. Shoreline and alongshore features
- b. The mean low water line was not delineated because the photographs were taken near high water.
- c. The foreshore consists primarily of sand and grass in water which have been delineated on the photographs.

- d. There are numerous large piers, bulkheads and groins in this area which have been noted on the photographs.
- e. No submerged cable or signs indicating a cable could be found in Little Round Bay as shown on U.S.C.&G.S. Chart 566. No signs or features indicating a submerged cable in Mill Creek could be found as shown on U.S.C.&G.S. Chart 566.

The overhead cables at the heads of Saltworks Creek,
Cypress Creek, Dividing Creek, and the Magothy River were not
delineated because the areas of these cables were not navigable.
The shore ends of all other overhead cables have been
delineated on the photographs.

8. Offshore features

There are numerous areas in which grass is growing in the water. They have been noted on the photos. The normal tide range in this area is about one foot, but the wind will increase this range considerably.

Other offshore features include numerous duckblinds scattered throughout both Rivers. Where visible, these features have been delineated on the photos.

9. Landmarks and aids

All landmarks and aids have been listed on Form 567. There are no aids and landmarks for Aeronautical Charts.

Two Lights and one Daybeacon in Blackhole Creek were pricked on the photos. They will plot in the border of sheet T-11801 and are needed for Project 20,000-829.

A Standpipe(Ldmk) east of T-11802 was also pricked under the same circumstances.

10. Boundaries, monuments, and lines

There are no boundaries or monuments on these two sheets.

11. Other control

Photo points were pricked as supplemental control to locate fixed aids in Little Round Bay. These photo points were numbered 200, 201, and 202.

12. OTher interior features

There were no other prominent interior features on these two sheets.

13. Geographic names

No name descripancies were found in field inspection.

14. Special reports

A Coast Pilot Report is not required per Modification to the original Instructions.

Submitted 5 April 1961

Approved:

George F. Wirth Chief of Party Completion Report
Project PH-6009 (21031)

Maps T-11943 thru T-11945 scale 1:10,000
T-11948 thru T-11950 scale 1:10,000
T-11811 thru T-11812 scale 1:5,000
T-11816 thru T-11817 scale 1:5,000
T-11801 thru T-11802 scale 1:10,000

1. General

This report is a combination Completion Report and Descriptive Report covering those maps completed as listed above.

2. Area

The area covers parts of the western shore of Chesapeake Bay, Baltimore Harbor, Gunpowder, Middle, Patapsco and Severn Rivers in the state of Maryland.

3. Purpose

Its purpose was primarily to provide data for preparation of special charts for the Maryland Department of Tidewater Fisheries. This was a reimbursable project completed under project number 20,000-829 at a scale of 1:20,000.

4. Maps

Map numbers originally assigned are shown on the letter sized diagram attached. All map numbers assigned to this project other than those listed in the title of this report have been cancelled and returned to the open listing for re-assignment.

5. Photography

Panchromatic photography covers the area at 1:20,000 scale taken in October 1960. The Baltimore Harbor area was also flown at 1:10,000 scale on the same date.

6. Field Work

Field work was completed for the area compiled and included recovery and identification of horizontal control. Inspection and verification of landmarks and fixed aids to navigation and field inspection of shoreline and offshore detail, drainage, cultural features and woodland cover.

It also included a Geographic Names Report.

No field work has been completed on the area of the cancelled maps.

See the Field Instructions and Field Reports attached for details.

المستخدين فيناه المستواري المستواري المستوان الم

7. Aerotriangulation

Thirteen strips were bridged on the stereoplanigraph covering only the maps compiled.

All control held within required tolerances and was considered adequate for compilation.

8. Compilation

4

#

All completed sheets have been compiled in ink and extend approximately one-half mile inland from the shoreline.

9. Classification

All completed sheets are classified incomplete. This classification means that the maps are based on a final bridge with field identified control but the delineation of details is not complete. These details are normally added during field edit.

The maps are not field edited hence will remain in the incomplete classification.

10. Future Chart Revision

They may be used as bases for chart revision with later photog-raphy.

All landmarks and aids to navigation are accurate and complete with positions determined by field and photogrammetric methods.

11. Final Review

All maps were office reviewed at the time of compilation, but have not had a final examination.

A comparison with the largest scale nautical charts has been made. The results of the comparison is noted on an ozalid copy accompanying each manuscript in the vault.

No contemporary hydrographic surveys are available in the area and at the time of this report none contemplated in the near future.

12. Registration of Incomplete Manuscripts

المتعاقب أأسط الأمراء يعاليها المالية الأوالية فالأوال بالسبح فقيعا بالسبار المتعاجرة أعاليا المدار

Although it is unusual to register incomplete manuscripts it was felt by the Photogrammetric Branch to be expedient with regards to this project in view of the following:

A. The project was inititated primarily to provide modern base maps, to replace base maps now obsolete (1933-1934)

لريز دايدان ويود فالانطاعة إعلادا كالسراء

Pressure of higher priority projects extended our capabilities such that we could complete only that portion that was needed for the Maryland fisheries reimbursable project 20,000-829.

B. Hydrographic operations are not planned for any time in the near future.

When hydrography is planned the present photography will be too old and new photographs will be taken to update the shoreline and provide hydro support based on bridging completed under this project.

C. The Chart Division have no plans as of how to reconstruct their charts in this area thru Fiscal Year 1972.

13. Data Files

- A cronaflex copy of all completed manuscripts is filed in the vault with a negative in the Reproduction Division.
- Control identification cards, control identification SEE FOLLOWING photographs, field inspection photographs, bridging photographs and related bridging data is filed in the Records Section of the Photogrammetry Division.

PAGE

C. Descriptive Reports

A copy of each report is on file in the vault. These reports do not contain a photogrammetric plot report, a compilation report, or a review report.

A page has been inserted in each Descriptive Report referring to this comprehensive report for a completehistory of these items.

D. Completion Report

A duplicate of this report is filed as a Completion Report in the Archives.

Geographic Names E.

On file with the Geographic Names Section.
