## SUMMARY TO ACCOMPANY DESCRIPTIVE REPORT T-12299

Shoreline manuscript T-12299 is one of fifteen similar maps in Project 21059 (PH-6217). The sketch on page 5 of this report shows the position of this map in the project. This is a Kelsh project in advance of hydrographic surveys in the same area. The field operations preceding compilation included recovery and identification of horizontal control and field inspection. The Kelsh compilation was at 1:20,000 scale from which a cronar positive showing shoreline and alongshore features was furnished for preparation of the hydrographer's boat sheet. 1:30,000 scale photographs taken September 1, 1962 and February 21, 1963 were used for compilation. 1:20,000 scale ratio prints were subsequently provided for hydro support purposes. The compilation manuscript is a vinylite sheet 7 minutes in latitude and 72 minutes in longitude from which the smooth sheet was scribed and reproduced on cronaflex. One cronar positive and one cronar negative are provided for record and registry after final review.
