SUMMARY  
T-12655 thru T-12659

This map is one of seventeen maps which comprise Job PH-6411, Valdez Arm, Alaska. The job diagram shows its location within the project limits. Maps T-12655 and T-12656 were compiled at 1:20,000 scale and maps T-12657, T-12658, and T-12659 were compiled at 1:5,000 scale.

The purpose of this job was to furnish support for a standard hydrographic survey and to update nautical charts covering the area.

Field operations, which began in 1966, were limited to recovery of horizontal control for aerotriangulation. There was no field edit.

Aerotriangulation and compilation photography was furnished at scales of 1:10,000, 1:15,000, and 1:40,000. All photography is panchromatic taken with the "L" and "S" cameras.

Five strips were bridged on the stereoplanigraph and adjusted by IBM 1620 methods. Sixteen horizontal control stations were used in the adjustment. The control provided for this bridging was adequate and complies with project instructions.

Compilation photography was the 1:10,000, 1:15,000, and 1:40,000 scale panchromatic photography. The Kelsh Plotter and the Wild B-8 were used to compile the maps. All line work is smooth compilation drafting.

Final review was done by the Rockville Quality Control Group in May 1977,

The following items are registered in the Bureau Archives:

1. A plastic copy of each map
2. A Descriptive Report for each map

Negatives for each map are filed in the Reproduction Division.

All field data are filed in the National Archives.

FIELD INSPECTION REPORT  
T-12655

There was no field inspection prior to compilation.

PHOTOGRAMMETRIC PLOT REPORT

Job PH-6411  
Valdez, Alaska

December 15, 1966

21. Area Covered

The area covered by this report is the entire shoreline of Valdez Bay, Alaska. Included in this area are 1:20,000 scale T-sheets T-12655 and T-12656. Also covered in this report are 1:5,000 scale T-sheets T-12657, T-12658 and T-12659 which are located as insets in T-12656.

22. Method

Five strips were bridged on the stereoplanigraph and adjusted by IBM 1620 methods. Strip #1 (64-S-6302 thru 6323) was adjusted on five triangulation stations with three stations as checks. Strip #8 (66-L-5577 thru 5582) was adjusted on three stations with three stations as checks. Strip #9 (66-L-5588 thru 5591) was adjusted on three stations with tie points as checks. Strip #91 (66-L-5591 thru 5596) was adjusted on five stations with one station and tie points as checks. Strip #41 was adjusted on five stations with tie points as checks. All tie points were averaged.

23. Adequacy of Control

The horizontal control provided for this bridge was adequate and with a few exceptions complied with project instructions. Control which could not be held within National Map Accuracy is listed below.

Valdez, BPR ASPHALT TANK FARM, STACK 1959. This point could not be held in either Strip #41 or Strip #91. No reason can be determined for not holding this station.

Valdez, NORTH BASE 1901. SS "C" (new) This point was picked on a corner of a barge which had moved between the 1965 and 1966 photography.

TANK, 1964 could not be held in Strip #41. Since it was held in Strip #91, it is believed that the point was misread during bridging operations.

24. Supplemental Data

Local USGS quads were used to provide vertical control for bridging operations. Vertical positions listed on the IBM outputs should not be used for compilation.

25. Photography

Photography was adequate as to coverage, overlap and definition. Strip #8 was poor in some respects since shadows cover the shoreline in some areas.

26. Additional Items

Ten of thirteen hydro points located in model 66-L-5588 thru 5599 (Strip #9) were located by the stereoplanigraph operator. The remaining three points could not be accurately determined and should be checked during compilation.

COMPILATION REPORT  
T-12655

31. Delineation

The map was compiled on the Kelsh Plotter using the 1:15,000 and the 1:40,000 scale panchromatic photography.

There was no field inspection.

Photography was satisfactory.

32. Control

Refer to the Photogrammetric Plot Report bound with this Descriptive Report.

The identification, density, and placement of horizontal control was adequate.

33. Supplemental Data

Boat Sheet No. 70279 dated August 29, 1966, was used as an aid in compilation of the mean high water line.

34. Contours and Drainage

Contours - Inapplicable.

All significant drainage was compiled.

35. Shoreline and Alongshore Details

There was no preliminary field inspection.

The mean high water line was compiled from office interpretation of the photography.

No mean lower low water line or shoal lines were compiled.

36. Offshore Details

No statement.

37. Landmarks and Aids

No Forms 567 were submitted.

38. Control for Future Surveys - None

39. Junctions

Refer to Form 76-36B, item 5, bound with this Descriptive Report.

40. Horizontal and Vertical Accuracy

No statement.

41. thru 45. - Inapplicable

46. Comparison with Existing Maps

A comparison has been made with USGS quadrangle of Valdez and vicinity, Alaska, scale 1:62,500, 1962 edition.

47. Comparison with Nautical Charts

A comparison has been made with Chart 8519, scale 1:79,291, 8th Edition, May 17, 1965.

Items to be Applied to Nautical Charts Immediately - None

Items to be Carried Forward - None

Submitted by:

R. E. Smith

REVIEW REPORT T-12655  
Shoreline Map  
May 1977

61. General Statement

The map was reviewed in its Class III Map (no field edit) phase by the Rockville Quality Control Group. The Descriptive Report contains all the pertinent information which may be required by users of the map.

62. Comparison with Registered Topographic Surveys

A comparison was made with Map T-2565, dated 1901, scale 1:40,000 including a 1:10,000 scale inset. This map is the latest registered prior survey of the area.

Map T-12655 supersedes Map T-2565 for reconstruction of nautical charts within the area.

63. Comparison with Maps of Other Agencies

Refer to the Compilation Report, item 46.

64. Comparison with Contemporary Surveys

A comparison was made with survey H-8900, dated 1966, scale 1:20,000. No significant changes were noted.

65. Comparison with Nautical Charts

Refer to the Compilation Report, item 47.

66. Adequacy of Results and Future Surveys

This map meets the National Standards of Map Accuracy and complies with compilation instructions and Bureau requirements.
