SUMMARY TO ACCOMPANY DESCRIPTIVE REPORT
T-12660 thru T-12661 and T-12954 thru T-12958

Shoreline maps T-12660 thru T-12661 and T-12954 thru T-12958 are the seven maps that make up project PH-6609. These maps cover the Severn River, Maryland, from its mouth south of Annapolis north to latitude $39^{\circ}05'15''$. These maps were compiled on the Wild B-8 stereoplotter in advance of hydrographic surveys to be made in the area. The field operations preceding compilation consisted of the recovery of horizontal control for stereobridging with the exception that field inspection of shoreline, bulkheads, piers, groins, etc. and the location of hydrographic signals was provided for only on T-12954. Field data was also provided for location of fixed aids on T-12954 and T-12957. The B-8 compilations were done at a scale of 1:5,000 for T-12956 thru T-12958 and a scale of 1:10,000 for T-12954 thru T-12955 and T-12660 thru T-12661. The three 1:5,000 scale maps cover Annapolis and vicinity. None of the maps are field edited. The Descriptive Report for the seven maps of the two separate number sequences will be registered under one combined report. One copy of the combined report will be filed under T-12954 thru T-12958 and a duplicate copy will be filed under T-12660 thru T-12661.

FIELD REPORT

PH-6609

Location of Fixed Aids to Navigation

In accordance with instructions dated July 9, 1965, fixed aids to navigation were located during the months of July and August 1965.

All fixed aids in Maps T-12954 and T-12957 along with the Eastport Harbor Lights 1 and 3 and Greenbury Point Shoal Light were located either by triangulation or photogrammetric methods.

Photo points are shown on the following photographs:

Contact field prints 65-S-4990, 4999, 5005, 5020, 5021

Greenbury Point Shoal Light is identified on contact print 56-S-5037. The two lights at the Naval Academy dock were identified on 3X field ratio print 65-S-5027.

U. S. DEPARTMENT OF COMMERCE
COAST AND GEODETIC SURVEY
October 22, 1965

General Statement

This report is submitted for the upper portion of the Severn River in Anne Arundel County, Maryland. The work was accomplished during the period of 11 October to 22 October, 1965, on verbal instructions from Messrs. Cravat and Fitzgerald of the Washington office. The 1965 Control Prints of 1:30,000 scale were adequate for the limited amount of field inspection in this portion of the Project.

All horizontal control stations, as indicated on a special horizontal control design prepared by Washington, were recovered and identified.

Triangulation station Manresa 1932, previously identified on 1:15,000 scale photographs, could be identified on the 1:30,000 photos using the same sub stations.

Triangulation station Arnold EM (MSFC) 1906, previously identified on 1:15,000 scale photographs, could not be identified on the 1:30,000 scale photos using the same sub stations. Two new sub stations were identified for this station.

Hydrographic Stations that were previously located by plane table methods have been pricked on the photographs wherever possible.

Aerotriangulation Report
Project PH6609
Severn River, Md. and Vicinity

21. Area Covered

The area covered by this report on Aerotriangulation bridging encompasses the lower Severn River and that portion of the west side of Chesapeake Bay between Sandy Point and Turkey Point, Maryland (T-12955, T-12956, T-12957, T-12958, T-12660 and T-12661).

22. Method

Two strips of photography (65 S 5022 - 65 S 5029) and 65 S 5034 - 65 S 5041) were bridged to extend horizontal control. The former strip of photography was bridged using the C-8 Stereoplanigraph and the latter on the Wild Stereocomparator. Both strips were adjusted by IBM methods and are analysed separately (see diagrams attached).

23. Adequacy of Control

Horizontal control station recovery and associated substitute control stations were adequate to control the bridge within the limits of accuracy required by National Map Accuracy Standards. Several additional control stations were office identified and used as check stations. All substitute control stations held except HORN SS "A". (No reasonable assumption can be made for this failure except that there were more than one burned over areas and the field measurements were made to such an area other than indicated in the sketch and on the photograph) and the 3 point fix to replace Station RIDGE which failed to tie by about 12 feet.

24. Supplemental Data

Not applicable

25. Photography

Photography was adequate as to coverage, overlays and definition.

26. Plotting Coordinates

Plotting coordinates are furnished at both 1:5,000 scale and 1:10,000.

27. Ratio Prints

The enlargement ratios were determined for all necessary photographs to furnish photographic coverage at both 1:5,000 scale and 1:10,000 scale.

28. Tie Points

All tie points were meaned.

6555034

76°30'

76°25'

Aerotriangulation Report
Severn River, Maryland
PH-6609

21. Area Covered

The area covered by this extension of triangulation control encompasses the upper reaches of the Severn River from latitudes $39^{\circ} 00' 00''$ to $39^{\circ} 05' 15''$ and longitudes $76^{\circ} 28' 07.5''$ to $76^{\circ} 37' 15''$ (sheets T-12954 and T-12955).

22. Method

Two flight lines of photography were bridged on the stereo-planigraph and adjusted by IBM.

23. Adequacy of Control

The location and number of horizontal control stations were satisfactory to insure adequate bridge adjustment.

The image of ARNOLD RM(MSFC) 1906, Substitute point "B", could not be positively identified on either of the two flight lines and its adjusted value did not meet standards. It has been deleted from the output data.

There is a disagreement between the positions of WEBB, 1933, Substitute points "A" and "B". An adjustment was made using each of these two control stations independently. Either adjustment resulted in satisfactory adjustment of the strip. Substitute point "A" left the smaller bow error in the bridge adjustment and was adopted as final.

24. Supplemental Data

Not applicable

25. Photography

Photography was satisfactory.

26. Coordinates for tie points between the two strips bridged have been averaged.

27. Plotting coordinate values (1:10,000 scale) have been furnished to Compilation.

Respectfully submitted

Paul Hawkins

COMPILATION REPORT
T-12954 thru T-12958, T-12660 and T-12661
June 1966

This report covers the compilation of two phases of the following seven manuscripts: at scale 1:10,000 - T-12954, T-12955, T-12660, and T-12661; at scale 1:5,000 - T-12956, T-12957, and T-12958.

The first phase was to provide a base for photo-hydro support for hydrographic operations of the area from about the entrance of the Severn River to Brewer Point (per letter, 6324). The second phase was the delineation of planimetry according to limits provided by the Marine Charts Division.

*the letter
referred to
is missing
from the
data
JSP*

This project was compiled on the Wild B-8 Stereoplotter.

The above mentioned manuscripts are classified Advance Manuscripts.

COMPILATION REPORT
T-12954 thru T-12958, T-12660 and T-12661
June 1966

31. Delineation

The compilation was done in two phases. The first was only shoreline and foreshore delineation for photo-hydro support. The second phase was taken from a layout sheet, supplied by the Quality Control and Review Group, indicating limits of interior detail from shoreline (roads and buildings). This was attempted (interior limits), but was not effected completely due to numerous trees obstructing roads, buildings, etc. Delineation was accomplished on the Wild B-8 Stereoplotter using September 2, 1965, "S" photographs.

32. Control

The bridges furnished by the Aerotriangulation Section ^{were} ~~was~~ adequate to control models for compilation. The models were leveled on shoreline points. (See bridge for further comment).

33. Supplemental Data

U.S. Geological Survey quadrangles were used for geographic names. Correct geographic names for manuscripts were approved and underlined by the Geographic Branch. The following quads were used: Gibson Island, dated 1954; Round Bay, dated 1956; Annapolis, dated 1957; and South River, dated 1957. All are scale 1:24,000.

34. Contours and Drainage

Inapplicable

35. Shoreline and Alongshore Details

The river is apparently in constant use considering the number of piers, bulkheads, fishtraps, and alongshore buildings. All delineation was office interpreted except sheet T-12954. Field photographs were furnished indicating MHWL, bulkheads, marsh limits, shallow areas, grass in water, groins, and duckblinds.

36. Offshore Details

No unusual problems were encountered compiling offshore details.

37. Landmarks and Aids

Only plotted triangulation stations that are landmarks and/or aids appear on the manuscripts.

38. Control for Future Surveys

None

39. Junctions

A satisfactory junction was made with adjoining surveys. (See layout sketch)

40. Horizontal and Vertical Accuracy

See Bridging Report.

41-45. Inapplicable

46. Comparison ^{with} ~~to~~ Existing Maps

None

47. Comparison with Nautical Charts

During compilation a comparison was made with Nautical Chart 566, dated October 5, 1964, and there were no discernible shoreline changes, considering the scale differences. Road patterns, etc., were not compared, as explained in Item 31, due to the fact that many of those features were hidden by tree foliage.

48. Geographic Names

See list of geographic names supplied by the Geographic Branch for each manuscript.

NOTES TO THE HYDROGRAPHER

This is to cover manuscripts T-12954 and T-12955 which were compiled to support hydrographic operations in the Severn River, Maryland.

Compilation of these manuscripts was done in accordance with Compilation Instructions (letter 6320).

MHWL offshore information and selection of shoreline passpoints for photo-hydro support have been furnished on T-12955. On T-12954 photo-hydro signals were selected, named, and pricked on field photographs. These signals were photoidentified by aerotriangulation and plotting coordinate values (1:10,000) were furnished for compilation. Photo-hydro signals, numbered 5401 to 5413, were located by B-8 Stereoplotter using field photographs with pricked selections of signals.

None of these signals are described; therefore, only a list of names and/or numbers is submitted.

T-12956 THRU T-12958
SEVERN RIVER, MD.
PROJECT PH-6609
AUGUST 1965

This project will support hydrographic operations in the Severn River, Md.

Three 1:5000 and four 1:10,000 scale manuscripts cover the area.

These notes are applicable to the three 1:5000 manuscripts.

Notes for the Hydrographer:

The manuscripts were delineated on a 1st phase basis as per paragraph 4, Compilation Instructions, dated July 15, 1965.

This provided for the compilation of the MHW line, offshore information and the selection of shoreline pass points for photo-hydro support.

The ratio photographs were prepared in the usual manner for hydro support. Five office selected signal sites were identified on the photographs as requested. One site, the radar dish on Greenbury Point (T-12958) was not pricked on the photographs as it was not clear what part of the large swivel dish would be sited on by the hydrographer.

Many of the shoreline pass points such as pier corners, can be used as hydrographic signals and should facilitate the photo-hydro party work.

Submitted by:

Jeter P. Battley Jr.
J. P. Battley, Jr.

Ratioed photographs prepared for hydrographic support are:

65 S 4995 thru 4998
65 S 5005-5006
65 S 5026 thru 5029

T-12955, T-12660 and T-12661
Severn River, Maryland
Project PH - 6609
August 1965

Notes to the Hydrographer:

This project will support hydrographic operations in the Severn River, Maryland. The project includes three 1:5,000 scale manuscripts and four 1:10,000 scale manuscripts.

This report covers three of the 1:10,000 scale manuscripts, (T-12955, T-12660 and T-12661); T-12954 will be bridged and compiled at a later date.

Compilation of these manuscripts was in accordance with the Compilation Instructions, Phase 1, dated July 15, 1965. This provided for the compilation of the MHWL, offshore information and the selection of shore-line pass points for photo-hydro support.

Photographs covering the area were ratioed to the 1:10,000 scale and all centers and pass points appearing on the manuscripts have been shown on the photographs. Two office selected signal sites were identified on the photographs and located on the manuscripts.

The north half of T-12661 is covered by 1:5,000 scale manuscripts, T-12957 and T-12958. These manuscripts were compiled first, reduced to 1:10,000 scale, and all details falling in the area where hydrography will be performed at 1:10,000 were applied to T-12661.

Many of the office selected pass points should be suitable for hydrographic signal sites.

Data furnished includes 2 cronaflex copies of the manuscripts, 3 ozalids and the following cronapaque ratio prints:

65 S 5022 thru 5026
65 S 4994
65 S 5035 thru 5040

Review Report PH-6609

T-12660, T-12661, T-12954 thru T-12958

Shoreline Survey

November 1976

61. General Statement

When the maps were received for final review, the date July 1967 was listed in the legend under the heading, Date of Final Review. There is no other indication that any of the maps were reviewed at that time. The date was apparently listed on the maps in error. Review has changed the date to November 1976, the date of this review.

A field report is furnished for Location of Fixed Aids to Navigation. This report refers to instructions dated July 9, 1965. These instructions are unavailable. The form 76-40 listing the aids to be charted was not furnished with the job data. In the compilation report, item 37, the compiler states only plotted triangulation stations that are landmarks or aids appear on the manuscript.

62. Comparison with Registered Topographic Surveys

T-5343	1:10,000	1934	(on T-12955)
T-5422	1:10,000	1933	(on T-12954)
T-8264	1:20,000	1942-1943	(on T-12956)
T-8265	1:20,000	1938-1942	(on T-12957, T-12958, & T-12661)
T-8271	1:20,000	1942	(on T-12660)

These surveys are superseded by the new maps.

63. Comparison with Maps of Other Agencies

U.S. Geological Survey Quadrangles:

Annapolis	1:24,000 Scale	1957
Round Bay	1:24,000 Scale	1956
South River	1:24,000 Scale	1957
Gibson Island	1:24,000 Scale	1954

64. Comparison with Contemporary Hydrographic Surveys

H-8859	1:5,000	1965	(T-12957 and T-12958)
H-8860	1:10,000	1965	(T-12660 and T-12661)
H-8874	1:10,000	1965	(T-12954 and T-12955)

H-8874 - This survey had not been verified or reviewed. Comparison was made with the penciled smooth sheet and T-12954 and T-12955. On the northern shore of Brewer Point and between Arnold Point and Rays Pond the grass-in-water limit line was removed during review from the Class III manuscript. Soundings indicated the limit to be closer to shore than was shown. Soundings also disproved the shallow line that had been shown offshore from 38°02' and 76°34'. The line has been removed from the photogrammetric manuscript.

H-8859 - Comparison was made with T-12957 and T-12958 and the surveys are in agreement.

H-8860 - Comparison was made with T-12660 and T-12661 and the surveys are in agreement.

65. Comparison with Nautical Charts

12282 (566)	1:25,000	1976
12283 (385)	1:10,000	1976

66. Adequacy of Results and Future Surveys

The maps meet the National Standards of Map Accuracy and comply with Bureau requirements.
