STORM EVACUATION MAPPING
NEW ORLEANS, LA. to MOBILE, ALA.
Scale 1:62,500

STORM EVACUATION MAPPING

The Storm Evacuation Mapping Program is a series of maps prepared by NOS at a scale of 1:62,500 in cooperation with the National Weather Service.

They are assigned to provide evacuation information in the event of severe coastal storms. Shown on the maps are principal evacuation routes, critical elevations along these routes, and five-foot contours with color gradients for guidance to high ground.

Details are sufficiently clear so that the maps can be reproduced by mass-communication media, including newspapers and television.

The program will eventually cover those areas of the Gulf and East Coasts which are vulnerable to flooding as a result of tropical cyclones and hurricanes.

Guidance and data received by National Ocean Survey from the National Weather Service include priority areas to be mapped, historical hurricanes and coastal storm-water levels at selected locations.

The maps are used by authorized emergency officials to determine probable areas of inundation by relating predicted maximum water elevations to the map contours.

The body of the map includes delineation of the main evacuation routes and feeder routes, low points along the road that might be engulfed, and high areas which are likely to remain above flood waters, thus affording some degree of refuge. These critical elevations are spaced on the map at intervals of at least two miles.

Both surfaced and unsurfaced evacuation roads are identified, along with county, state, and federal route designations, and the number of lanes for each road.

Contours on the maps provide a means of estimating areas of possible flooding. These areas are shown in increments of 5 and 10 feet in distinctive color tones.

Urban populations and normal and summer populations of resort areas are also shown.

A data block on each map gives the storm-water levels at selected locations of previous hurricanes.

STORM EVACUATION MAPPING

JOB PA-7115

FIRST INCREMENT OF BASE MAP MOBILE

MARCH, 1971

PHOTO PARTY 63

1. ASSIGNMENT AND AREA COVERED:

Photo Party 63 was assigned Storm Evacuation Mapping Job PA-7115. Work was commenced on 22 February, 1971 and completed 26 March, 1971. This work was for the first increment of Base Map Mobile. Work commenced at longitude 90 degrees W and continued E to longitude 89 degrees 30' W. Field work was done in accordance with Project Instructions dated 5 March, 1971 and amended 11 March, 1971.

2. LEVELING:

(a) Leveling was done in accordance with Project Instructions. All critical elevations are of the lowest points on the evacuation routes.

(b) No high spots were determined as points of refuge. The area encompassed by this increment is generally low or marshy. Any point of refuge will be north of the thirty foot contour.

3. EVACUATION ROUTES:

All evacuation routes were annotated with; road names, classification, and elevations.

Generally the state and county roads are of the same elevation as the ground. The Interstate Highways are elevated.

4. RAILROADS:

No railroads are to be shown as evacuation routes.

5. ADEQUACY OF USGS QUADS:

Most of the quads are outdated and inadequate as to the present road system. County, Parish, and Oil Company Maps were submitted. Critical elevations are also shown on these maps and should be considered final as to location.

STORM EVACUATION MAPPING

JOB PH-7115

SECOND INCREMENT BASE MAP MOBILE

APRIL 1971

PHOTO PARTY 63

1. ASSIGNMENT AND AREA COVERED:

Photo Party 63 was assigned Storm Evacuation Mapping Job PH-7115. Work commenced on the Second Increment of Base Map Mobile on 29 March, 1971 and was completed 27 April, 1971. Work started at 89 degrees 30' W and continued Eastward to 86 degrees 30' W. Field work was done in accordance with Project Instructions dated 5 March, 1971 and amended 4/19/71.

2. LEVELING:

Leveling was done in accordance with Project Instructions. All critical elevations are of the lowest points on evacuation routes. These routes were selected with the guidance of local Civil Defense Directors Messrs. Wade Guice & Kidd.

3. EVACUATION ROUTES:

All evacuation routes were annotated with road names, classification, and critical elevations. These routes were selected with the knowledge of the persons mentioned in Item 2 above.

4. RAILROADS:

No railroads are to be shown as evacuation routes. Messrs. Guice & Kidd of C.D. & Mr. Tillson of the NWS of Mobile do not recommend railroads as evacuation routes.

5. ADEQUACY OF USGS QUADS:

County Maps are submitted to update the USGS Quads covering this area. Any critical elevations shown on these county maps should be considered final as to location.

6. POINTS OF REFUGE:

Local Civil Defense Directors did not recommend any high points as places of refuge. MR. Tillson of NWS suggested that I confer with the C.D. people as to their views on points of refuge. Civil Defense Directors feel that any dissemination of refuge points would be detrimental to the welfare of citizens. Points of refuge generally selected by CD are buildings. Enclosed with field records is a Harrison County Map prepared by CD showing their shelters.

STORM EVACUATION MAPPING

JOB PH- 7115

TRAILER INCLINED BASE MAP MOBILE

JUNE 1, 1971

PHOTO PARTY 63

1. ASSIGNMENT AND AREA COVERED:

Photo Party 63 was assigned Storm Evacuation Mapping Job PH-7115. Work commenced on 27 April, 1971 and was completed on 4 June, 1971. Field work was done in accordance with Project Instructions dated 5 March, 1971 and amended 19 April, 1971.

2. LEVELING:

Leveling was done in accordance with Project Instructions.

3. EVACUATION ROUTES:

All evacuation routes were annotated with; road names, classification, and critical elevation points. Mr. Tilsen of the NWS, Mr. Gamble of the Red Cross, Mr. Howard Black of the Mobile County Civil Defense were informed of the project requirements and provided assistance in selecting routes.

RAILROADS:

With one exception the railroads parallel highways and elevations on RR were not determined as per verbal instructions. The lone exception being the RR that crosses Mobile Bay's upper reaches.

5. ADEQUACY OF USGS QUADS:

U.S.G.S. Quadrangles are supplemented by current county, and city maps. Also sketches were made where possible to show road changes.

6. DISASTER SHELTERS:

Disaster shelters are the responsibility of the red Cross and are delineated on the city map of Mobile, Theodore Quad, Chickasaw quadrangles.

6. RAILROADS:

A five foot contour was sketched in black ink at points near the evacuation routes.
