Descriptive Report on the sheet showing
the country between the Tahna River and Jay Cape.

This sheet shows on a $\frac{1}{25,000}$ scale the character of the beach
between the Tahna River and Jay Cape.

Between the mouth of the Tahna and the eastern arm of the Tahtee,
back of the beach, the country is covered by heavy woods which
have been partially destroyed along the line where the glacier
had temporarily pushed forward on them - Lake Mat is a
very shallow lake which goes very nearly dry in August.

The delta of the Tahtee is a very extensive one and in 1894
the waters drained through it entered the sea by three mouths
as indicated - Back of the sand beach which lined the shore
are mud flats & inside them considerable stretches of forest.

Just east of Jay Cape is a small sandy islet which
seems to have been cut off from a moraine ridge which
came to the beach near here & inside this islet is a very
fair landing place for boats; it is one of the favored landing
places of the Indians when hunting on this shore.
