U.S.COAST & GEODETIC SURVEY  
DR. HENRY S.PRITCHETT, SUPERINTENDENT.

DESCRIPTIVE REPORT  
OF THE  
TOPOGRAPHIC SHEET...SCALE 1/40,000.

EMBRACING  
THE  
SHORE LINE AND CONTIGUOUS TOPOGRAPHY  
OF THE  
GRANTLEY HARBOR  
AND  
EASTERN SHORES OF PORT CLARENCE,  
ALASKA.

BY THE PARTY UNDER CHARGE OF J.F.PRATT, ASSISTANT,  
SEPTEMBER.....1900.

TOPOGRAPHY BY R.L.FARIS, ASSISTANT.

DESCRIPTIVE REPORT  
TOPOGRAPHY OF GRANTLEY HARBOR  
AND  
EASTERN PORTION OF PORT CLARENCE,  
ALASKA.

SCALE.....1/40,000.

PLANETABLE SURVEY BY R.L.FARIS, ASSISTANT,  
SEPTEMBER.....1900.

As there was no geographical position to start this work on it became necessary to execute the topograbhy by forward telemeter distances and then, after the determination of the geographical position, fit a projection to the topogarphy.

The two spits at the westerly end of Grantley Harbor are composed of fine gravel. Their general level is only about two or three feet above ordinary high water.

The country comprising the North and South sides of Grantley Harbor is composed of rounded hills covered with tundra.

Teller, or Teller City, and Bering City were less than two months old at the time that the survey was made. Both places are distributing points for the interior mining districts.

Teller Reindeer Station is at the mouth of Mission Creek, a watering place in years past for vessels.

A handwritten signature in dark ink, appearing to read "J. G. Smith", with a long horizontal flourish extending to the left.

Assistant C. & G. Survey,  
Chief of Party.
