Descriptive Report
Topographic Sheet

No. 2540

East Coast of Porto Rico
Playa Blanca to Punta Guayanés

This sheet comprises shore line only. The work was done by Mr F. F. Weld, Aid.

The shore line is low in most places, the most prominent headland being Pt. Lima which is the most prominent hill on the shore line on this part of the coast.

The Playas of Naguabo + Humacao are the shipping points of the towns of the same name and sugar, coffee & different products of the island are hauled to these points and lightered off to vessels. Naguabo is about a mile & a half inland & Humacao about 7 miles. Each has a very fair road from the Playa to the town. Humacao is the port of entry for this part of the coast and has a Custom House at the Playa.

J. B. Douthett
Assistant Col. S.
Chief of Party.
