Description Report

To accompany Topographic sheets of Port Poloungue, Port Cumine and Port Brigue, West Coast of Szechuan.

P85 Port Poloungue is shown on one sheet, scale $1/50,000$. It was executed in March 1903 by C. E. Whiford A'd. The points, Soloungue, Spit and Poloungue Tower were plotted on the sheet by their relative distances and the control of the work rests on these points.

P86 Port Cumine is shown on one small sheet, scale $1/50,000$. It was executed by C. E. Whiford A'd, during March 1903. The control of the orientation was by the magnetic needle.

P119 Port Brigue is shown on a small sheet on a scale of $1/50,000$. The work was done by E. F. Hession Reader during June, 1903. The orientation of the sheet was controlled by magnetic needle. This sheet contains no triangulation point and will have to be located by the position of the joining point with the next sheet as determined from S and Bore.

Respectfully submitted
H. F. Plym.
