Descriptive Report to Accompany Topographic Sheet #.....

(Field No.7), Juan de Fuca Strait, Washington, 1907-8, Scale : 1--80 000.

1. This sheet includes a portion of Juan de Fuca Strait on a scale of 1 to 80 000. On it have been plotted some sextant cuts to foothills in the vicinity of Port Angeles and Port Crescent, these sextant cuts having been taken during the progress of the topographic work in that locality.

2. The cuts were taken from the ship under way, advantage having been taken of a clear day to get the ship underway for this purpose. Three observers measured simultaneously the two position angles and the angle between a hill and some signal. The work is considered rough, as the seeing was bad owing to glare and haze, some of the positions are weak, and the cuts to the hills are oriented by signals less distant than the hills themselves. The intersections, however, give the summits of the more noticeable elevations in the vicinity of the coast with sufficient accuracy for practical purposes, should it be considered desirable to show them on the chart.

Respectfully Submitted,

Ass't., C. & G. Survey,

Commanding.
