COAST AND GEODETIC SURVEY

Superintendent.

Stat. *S. Alaska*

DESCRIPTIVE REPORT.

Top. Sheet No. *3281*

LOCALITY:

*Prince of Wales Island - Coast Coast -
South Pt. to Stone Rock.*

1912

CHIEF OF PARTY:

Hestdahl & Smith

11-4645

3281

(1)
Descriptive report to accompany Topographic Sheet No. 1
Prince of Wales Island, Alaska.

Method of Work

3281

After triangulation stations were plotted on the sheet, beginning at A Orca a plane table traverse was carried to the southern limit of the sheet, positions and orientation being checked by A Stone Rock. A number of points were white washed in McLean Arm before running the shore line so that a meridian was carried from A Orca to Olet at the head of the Arm in three right-ascensions a probable accumulation of error in azimuth. From A Orca a cut was made on OGG, a white washed mark placed at the north side of the entrance to Gardner Bay checking azimuth to this point. A traverse was carried from A Orca to Kendrick Bay, a sub-traverse being run into Gardner Bay. In Kendrick Bay cuts were made from A Head and A Brick to all signals in sight. After locating by cuts as many signals as could be seen, work in the Bay proceeded by traverse. From A Brick a traverse was carried north along the outer shore of the islands in the entrance to the bay and up along the shore of Prince of Wales Island to A Scott, sub-traverses being run into Hidden Bay and the small bay found a mile further south.

Shoreline

The shore is generally bold. Where the dotted low water lines are shown there are ledges. Sand beaches are shown in their proper legend. In bays and arms the branches of trees extend over the water line, but on the outer coasts there is twenty or thirty feet of bare rock between the trees and the water line where wind and spray prevent the growth of vegetation. The shore is generally of granite but some marble is found about Squal Rut and Una on either side of the main channel into Kendrick Bay.

Contours

Cuts were made on hill tops and shoulders and elevations determined. Contours were sketched at interval of 100 feet. The ridge on the South and West sides of Gardner Bay is bare of trees as is the hill (elevation 2175) situated between South Arm and the main part of Kendrick Bay. In the north face of the latter hill is a large depression, the bottom of which is marshy ground draining into a small lake. The inner sides of this depression are thickly wooded.

The higher points South and Southwest of Short arm are bare of trees and so is the northern ~~side~~

of the twin peaks at the west edge of the sheet (Lat $54^{\circ}55'$), the southern one is thickly wooded. The rather flat top of the hill on which Aken is found is covered with a few scattered, scrubby trees and several small ponds. A small lake is reported where dotted contours are shown about a mile west of Gardner Bay between the rounded knoll (1175 ft. ele.) and the summit of the higher ridge.

General In'

In the northern part of Kendrick Bay and West Arm are many submerged rocks. The shore north from Kendrick Bay is very foul.

The shores of Hidden Bay are rather lower than is found elsewhere on the sheet. There are several fresh water streams, perhaps the largest on the sheet, flowing into the head of the bay, but these are only large brooks. North of this bay most of the contours are dotted owing to fogs which generally obscured everything back of the first trees, revealing only an occasional glimpse of the hills further back. The outer part of this bay offers the best shelter for small boats found in this vicinity, but it would not be practicable for vessels of over a hundred tons on account of the rock which partly obstructs the narrow entrance.

(H)

In general the country is thickly covered with spruces, cedars, fir, and hemlocks, very little deciduous growth being found.

The sheet was photographed in two parts on 8" x 10" plates, the negatives being retained on the sheet.

Respectfully submitted,

E. E. Smith,

Asst.
