3383

DEPARTMENT OF COMMERCE AND LABOR.

COAST AND GEODETIC SURVEY.

O.H. Tittmann, Superintendent.

Survey of the Pamunkey River, Virginia.

DESCRIPTIVE REPORT.

For Topographic Sheet ~~X~~, 3383

From White House Va. to 4 1/2 miles above New Castle, Va.

between

Latitude 37 34' and 37 42' and

Longitude 76 59' & 77 13'

Scale 1/20000

From November 16th, 1912, to February 19th, 1913.

SCHOONER "MATCHLESS"

O.W. Ferguson, Assistant, C. & G. S., Commanding.

OBSERVERS.

O.W. Ferguson, Assist.; James E. Marsh, Mate; Henry

B. Campbell, Aid; and James S. S. Jones, Aid.

This sheet covers a portion of the River not before charted nor marked for navigation, nor are there day marks now.

It shows the Pamunkey River from where it leaves the Rail Road and passes through a good agricultural country, to 4 1/2 miles above the bridge at New Castle.

DESCRIPTIVE REPORT.
)))))))
 For Topographic Sheet G,

33333

 CONTROL

The control of this work is excellent being by a new system of triangulation with short sides and many stations, from White House to Station Crow, half way up the sheet, and, by a carefully observed, marked and computed Meander Line carefully checked and plotted and verified by a good determination of the declination of the Needle at its farthest point. The observations for Azimuth and Latitude at the upper end of the triangulation show that the positions are all accurate.

 - - SHORES

There is a good deal of marsh on this sheet, also, but for less than on the preceding, and the growth of vegetation on these marshes is not so high as on the lower river.

About two-thirds of the shore line is of soft mud, along a very narrow or wider marsh. Where not ~~not~~ muddy, the shores are of silt, sand and clay higher up.

 SURFACE

There is $1/3$ of the surface marshy, covered with grass, and fully \times another $1/8$ of swamp covered with a growth of gum and ash timber.

The general surface becomes more elevated as we ascend the river, being of an elevation of ~~from~~ 10 to 20 feet on the lower portion and from 20 to 70 on upper portion of the river.

There is no stone nor gravel in the soil and consequently it washes readily, but ^e over this portion of the river are many good farms with

DESCRIPTIVE REPORT.

For Topographic Sheet G,

large stretches of level land . In many stretches along the shores
^{are} strata of marl, which contains 40 % of lime, some potash and is valuable
 for fertilizer. Many tons of it have been taken out, from 100 years ago
 to the present, and put on the land for fertilizing, but the industry
 will yet be carried on in a much larger and more economical way by the
 use of a little capital and some machinery. The trees grow
 large and heavy along these marl banks, so that where there is no marsh
 the shores are covered with large trees which in time fall into the
 river, injuring navigation.

 Water

Over this entire sheet the water is fresh and is used by the
 ships and barges for drinking purposes, but it is never clear and is
 probably a poor water to drink. There are a good many "free water"
 (soft water) springs which furnish clear and healthy water, but
 Artesian water is not ⁱⁿ general obtained.

 OCCUPATION

The inhabitants are generally occupied at farming, but many neglect
 the land for the ready cash found in the wood, tie, poles and lumber ^{business}
 the country is divided up into average large farms of from 200 to
 1500 acres , a portion, 10 %, of the land is owned by colored people;
 but in general the colored people work on the large farms owned by
 white men, for 75 cts. a day and board themselves.

 PRODUCE

The products are the various products of the farms in quite large
 quantities , Wheat, Corn and Peas also a goodly portion of beef cattle are

DESCRIPTIVE REPORT.

 For Topographic Sheet G,

fattened on the corn raised, but poultry and pork are the main shipments. Wood, lumber, ties, poles and mine poles, props, and pilings for wharves and bridges along the railroad are shipped out.

 TOWNS

White House is at the lower confines of the sheet, but there being no regular line of steamers run on the river the lines of commerce and trade all tend to the railroad stations, and nearly all on the South Side of the river is tributary to Tunstall and the North side to Lester Manor, and Tunstall. A list of triangulation stations and objects on this sheet accompanies this report, giving the geographical positions of each. *On eight sheets.*

O.W.Ferguson

Assistant, C.&.G.S.
