Descriptive Report to Accompany Zimovia Strait Topographic Sheet

This sheet takes in the narrow part of Zimovia Straits, from Olive Cove south.

As this work was done in a very limited amount of time, with the principle purpose of furnishing sufficient data for the hydrographic work, no attention was paid to the contours.

The northeastern shore is the clear side of the straits. The vicinity of signal Dick on the southwest side is foul.

South of signal Carl a large bay extends back over a mile.

The islands in the center of the straits are low and wooded.

Just southeast from signal But is an extensive area of boulders the tops of which are bare about 7 feet at higher low water.
