SECTION OF FIELD RECORDS

Report on Topographic Sheet No. 4416

Kolo Harbor, Molokai, Hawaiian Islands

Surveyed in 1925.

Instructions dated November 26, 1924, March 31, 1925.

Chief of Party, R. W. Woodworth.

Surveyed and inked by F. W. Malnate.

1. The records conform to the requirements of the General Instructions.
2. The plan and extent of the survey satisfy the specific instructions.
3. The usual field drafting was done by the field party and was well executed.
4. A satisfactory junction was effected with the old survey (T. 3526) It is to be noted in this connection that $\odot$ At which is the same point as $\odot$ At on T. 3526 was located about 32 meters to the westward of the old location. This discrepancy could not be accounted for by the Chief of Party, who was consulted relative thereto when in the Office. Inasmuch as the discrepancy was noticed in the field and the new work was checked to pick up any accidental errors, it is reasonably safe to accept the new location as correct.
5. The character and scope of the surveying are satisfactory.
6. Reviewed by A. L. Shalowitz, November, 1925.

Approved LOR

DESCRIPTIVE REPORT - TOPO.SH.#4.

KOLO, Molokai I., T.H.

DESCRIPTION of LOCALITY : Kolo, 10 miles west from Kaunakakai, is a shallow, semi-protected harbor developed by Libby-McNeill-Libby to handle freight and pineapple shipments of their plantation on SW Molokai.

The wharf is a heavily built wooden structure, having a road constructed for heavy truck traffic between it and the plantation on the summit of Mauna Loa.

The only buildings at Kolo are those of the construction camp.

The long sand beach is backed with a dense growth of algeroba trees extending up the gentle hill slopes for a short distance.

FUTURE CHANGES : It is likely that the present road will be changed in back of the wharf, so as to eliminate a steep grade existing at present. To do this a small cliff will be blown out and the present approach to the wharf continued around the beach to the eastward.

The position of the range lights is to be changed to bring them further apart and to a greater elevation, so that they will be visible to the small towboat as it is hauling the barges out of the harbor. At present the height of the barge obscures both ranges for the pilot of the towboat.

If the cultivation of pineapples is successful for the next three years or so, a breakwater will be built from shore, out to, and along, the shallow reef. This is needed to shut off the heavy swell within the harbor.

SURVEY METHODS : Plane table traverse was run from triangulation station 'Try' on the west to station 'Wharf', obtaining a 6 meter closure which was distributed along the line run.

It being impossible to locate a triangulation station on the easterly extremity of the shoreline desired, a check run was made from station 'Pod' to 'Wharf', giving a 3 meter error which was distributed along the run.

Respectfully submitted,

R.W. Woodworth, Jr. H&G. En.

Chief of Party

1925.
