DESCRIPTIVE REPORT

To Accompany

Topographic Sheet "C". **4438**

Instructions:

This survey was made under the Inspector's orders
of _____

Extent:

This sheet covers the Harbor of the City of Richmond,
San Francisco Bay.

Purpose:

To note and locate the changes which have been made
and which are in progress in the improvement of this harbor.

Method of Survey:

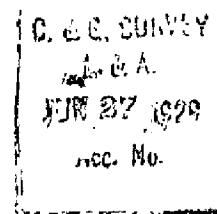

Two triangulation signals were established and located with a 4" theodolite. These together with existing triangulation, controlled the survey which was done by plane table and stadia. The method of control was chiefly by 3 point positions and resection; only one short traverse being run along the road from Point Petrero to a point near the junction of Cutting Boulevard and Wine Street. This was slightly over a mile and closed with a 5 meter error which was adjusted.

Landmarks :

The several aids to navigation which were located, appear on the present chart. Several objects appearing in the water area, not of a permanent nature, were located. These consist of flags for guidances in dredging operations, and slender scantlings, called sticks on topographic sheet, apparently put down by fishermen for their own guidance.

Changes Noted:

The pier just south of the brickworks plant shown on
