INSTRUCTIONS:

This survey was made under the Director's Instructions dated January 21, 1932.

METHOD OF SURVEY:

The customary plane-table method was used with three point fixes comprising the majority of locations. Traverses were run up Wiccacon and Bennetts Creeks. The former closed well within the allowable limit and the latter was not long enough to be at fault.

EXTENT:

This sheet comprises a survey of the shore line of Chowan River from a line about 2 miles south of Colerain Landing to and including the entrance to Wiccacon Creek to Triangulation Station CREEK and an intersection station, Triangulation Station FLAG abeam of it, of Wiccacon Creek from the entrance to the Steel Bridge north of Harrelsville, and of Bennetts Creek for the first two miles of entrance to a point where this stream becomes quite restricted making satisfactory control difficult.

DESCRIPTION:

The shore line on both sides of the Chowan River is irregular due largely to the extent of cypress swamps. On the easterly shore the bank is firm with a bluff line of varying heights and extends to about Latitude 36 - 14. The Cypress swamps takes over a small portion north of this, and, in a few hundred meters, is replaced by firm ground again. This latter extends to a point about 400 meters north of Cannon's Ferry and is succeeded by cypress and grass swamps to the northerly limit. Holiday Island has its entire shore line in cypress swamps. The westerly shore of the river is composed of firm ground, with an occasional, almost negligible, stretch of sandy beach except around Colerain Landing, extending from the southerly limit to a point about 300 meters north of Colerain Landing. The beach around the Landing is sandy and is an attraction for a bathing resort located there. North of the point heretofore mentioned the shore line becomes a cypress swamp extending with only a few minor breaks to a point about 600 meters north of Triangulation Station TAYLOR. The firm ground takes over here and extends to a point abeam of Triangulation Station SWAMP where it is succeeded by cypress and grass swamps for the remainder of the sheet to the northerly limit. Wiccacon Creek shore lines are mainly cypress swamps until in the vicinity of Tar Ferry where firm ground is encountered frequently. Bennetts Creek for the extent of the survey has swampy shore lines.

COMPARISON WITH  
PREVIOUS SURVEYS:

In general the shore lines of the river have changed very little, but, as the shore line composed of a cypress swamp is variable, the change would be almost elastic. Most of the roads have disappeared because of the opening of the bridge has made ferries unprofitable. There are a few roads, variably improved, leading to the larger landings.

TRAVERSE OF  
WICCACON CREEK:

The control for this traverse was effected by projecting a straight line from MASON after a 45 degree turn off from the line MASON-PILAND ranged in from MASON. This was check taped and the closure at the determined location (Topographic Signal A) was much below the allowable. An azimuth line observed from Triangulation Station COTTON was taped from this Second Order station to Tar Ferry to be used there for a check. This station, Azimuth No. 2, was also closed on below the allowable. To provide a station at the termination of the traverse a theodolite and tape traverse was run from Triangulation Station COTTON. Azimuth No. 1 was located at the intersection of two roads and available to local engineers, then the theodolite traverse continued to the Steel Bridge where Topo. Signal BRIDGE was determined. The distances were check taped and all angles were determined by 6 D. and R. This traverse was computed<sup>by</sup> traverse methods providing a Fourth Order closing station at the steel drawbridge where the Wiccacon Creek survey terminated.

CONTROL FOR  
SURVEY:

The control for this survey was effected by third order triangulation brought down from a second order scheme. The third order was expanded from the second order line BULL POND-LAWRENCE and carried through to a line and position check with old work at COW ISLAND<sub>2</sub>-BULL POND and COW ISLAND<sub>2</sub>-MONTROSE with further check on second order at Triangulation Station CANNON. The second and third order work checked within one meter at Triangulation Station MT. PLEASANT, a position check station from the second order work, which was sufficiently accurate for continuation. Beyond Triangulation Station MT. PLEASANT unadjusted positions of the third order triangulation stations were used, the accumulated discrepancies in this scheme being inappreciable for the topography.

COMMENTS:

The cypress swamp shore line was difficult of delineation because of scattered and often isolated trees well out in deep water. To be uniform the inshore line was taken and the scattered off lying trees merely indicated by random conventional symbols.

MAGNETIC MERIDIAN:

One magnetic meridian was determined by declinometer at Triangulation Station BULL POND at the southern end of the sheet. This value was checked at Mt. Pleasant Wharf near the northerly end and the same value found. However, a C. & G. S. Magnetic Station is located at Gatesville, N.C. only a very few miles from the northerly limit of this sheet. From this station a more satisfactory value for this area has no doubt already been obtained by a party constituted for such work.

STATISTICS:

Shore line	55.6 Statute miles.
Area	13.2 Square Statute miles.

LANDMARKS:

DEPARTMENT OF COMMERCE  
U. S. COAST AND GEODETIC SURVEY

TOPOGRAPHIC TITLE SHEET

4676

The Topographic Sheet should be accompanied by this form,  
filled in as completely as possible, when the sheet is for-  
warded to the Office.

Field No. A

REGISTER NO. 4676

State. North Carolina

General locality. Chowan River

Locality. White Ldg., Bull Pond Point to Wiccacon Creek

Scale. 10,000 20,000 Date of survey March--April, 19232

Vessel. M. V. NATOMA

Chief of Party. C. A. Egner

Surveyed by. William F. Deane

Inked by. William F. Deane

Heights in feet above. to ground to tops of trees

Contour, Approximate contour, Form line interval. feet

Instructions dated. January 21, 19232

Remarks:

GPO
