When entering names of personnel on this record give the surname
and initials (not initials only).

Remarks:

Photogrammetry (Shoreline) Survey T-8594

March 4, 1946

This shoreline survey is essentially a revision of the shoreline details on planimetric map T-5631. Revised details are designated in red on the manuscript and were compiled from photographs taken March 9, 1945, and from field inspection of August and October 1945.

The field inspection and office compilation were accomplished by the Tampa Photogrammetric Office under supplemental instructions for project CS-312 B, dated August 4, 1945. Project CS-312 is a topographic mapping project for the production of 7½ minute topographic quadrangles. The layout of the topographic maps to be produced on this project is shown on the enclosed topographic index. These topographic maps will be published at scale 1:25,000 and will supersede for publication the planimetric maps now existing in the same area. The existing planimetric maps are shown on the enclosed planimetric indexes 129-F and 129-H.

With reference to the planimetric maps now existing within the limits of project CS-312, maps Nos. T-5625 to T-5633 are modern and accurate planimetric base maps at scale 1:10,000. The instructions for project CS-312 call for the revision of shoreline details on these sheets so that the larger scale information will be available for future hydrographic investigation and for nautical chart compilation and correction. T-5631 is one of the first of this group of maps to be revised at the Tampa Office.

Field Inspection:

Field inspection was accomplished in ^{August and October} ~~September~~ 1945, using 1:10,000 scale ratio prints of photographs Nos. 450-1602 to 450-1604, inclusive.

The outside mean high water line was inspected after the September 15, hurricane as indicated by notes on the field inspection photographs.

Field inspection was accomplished by a field party of the Tampa Photogrammetric Office, Lt. Comdr. J. C. Bose in charge.

Compilation:

The manuscript consisted of a black print of planimetric map T-5631 on cellulose acetate. Shoreline corrections and additions were made in red on this print from the 1:10,000 scale single-lens ratio prints, and from the field inspection notes. These corrections include the mean high water line, offshore details, and along-shore buildings.

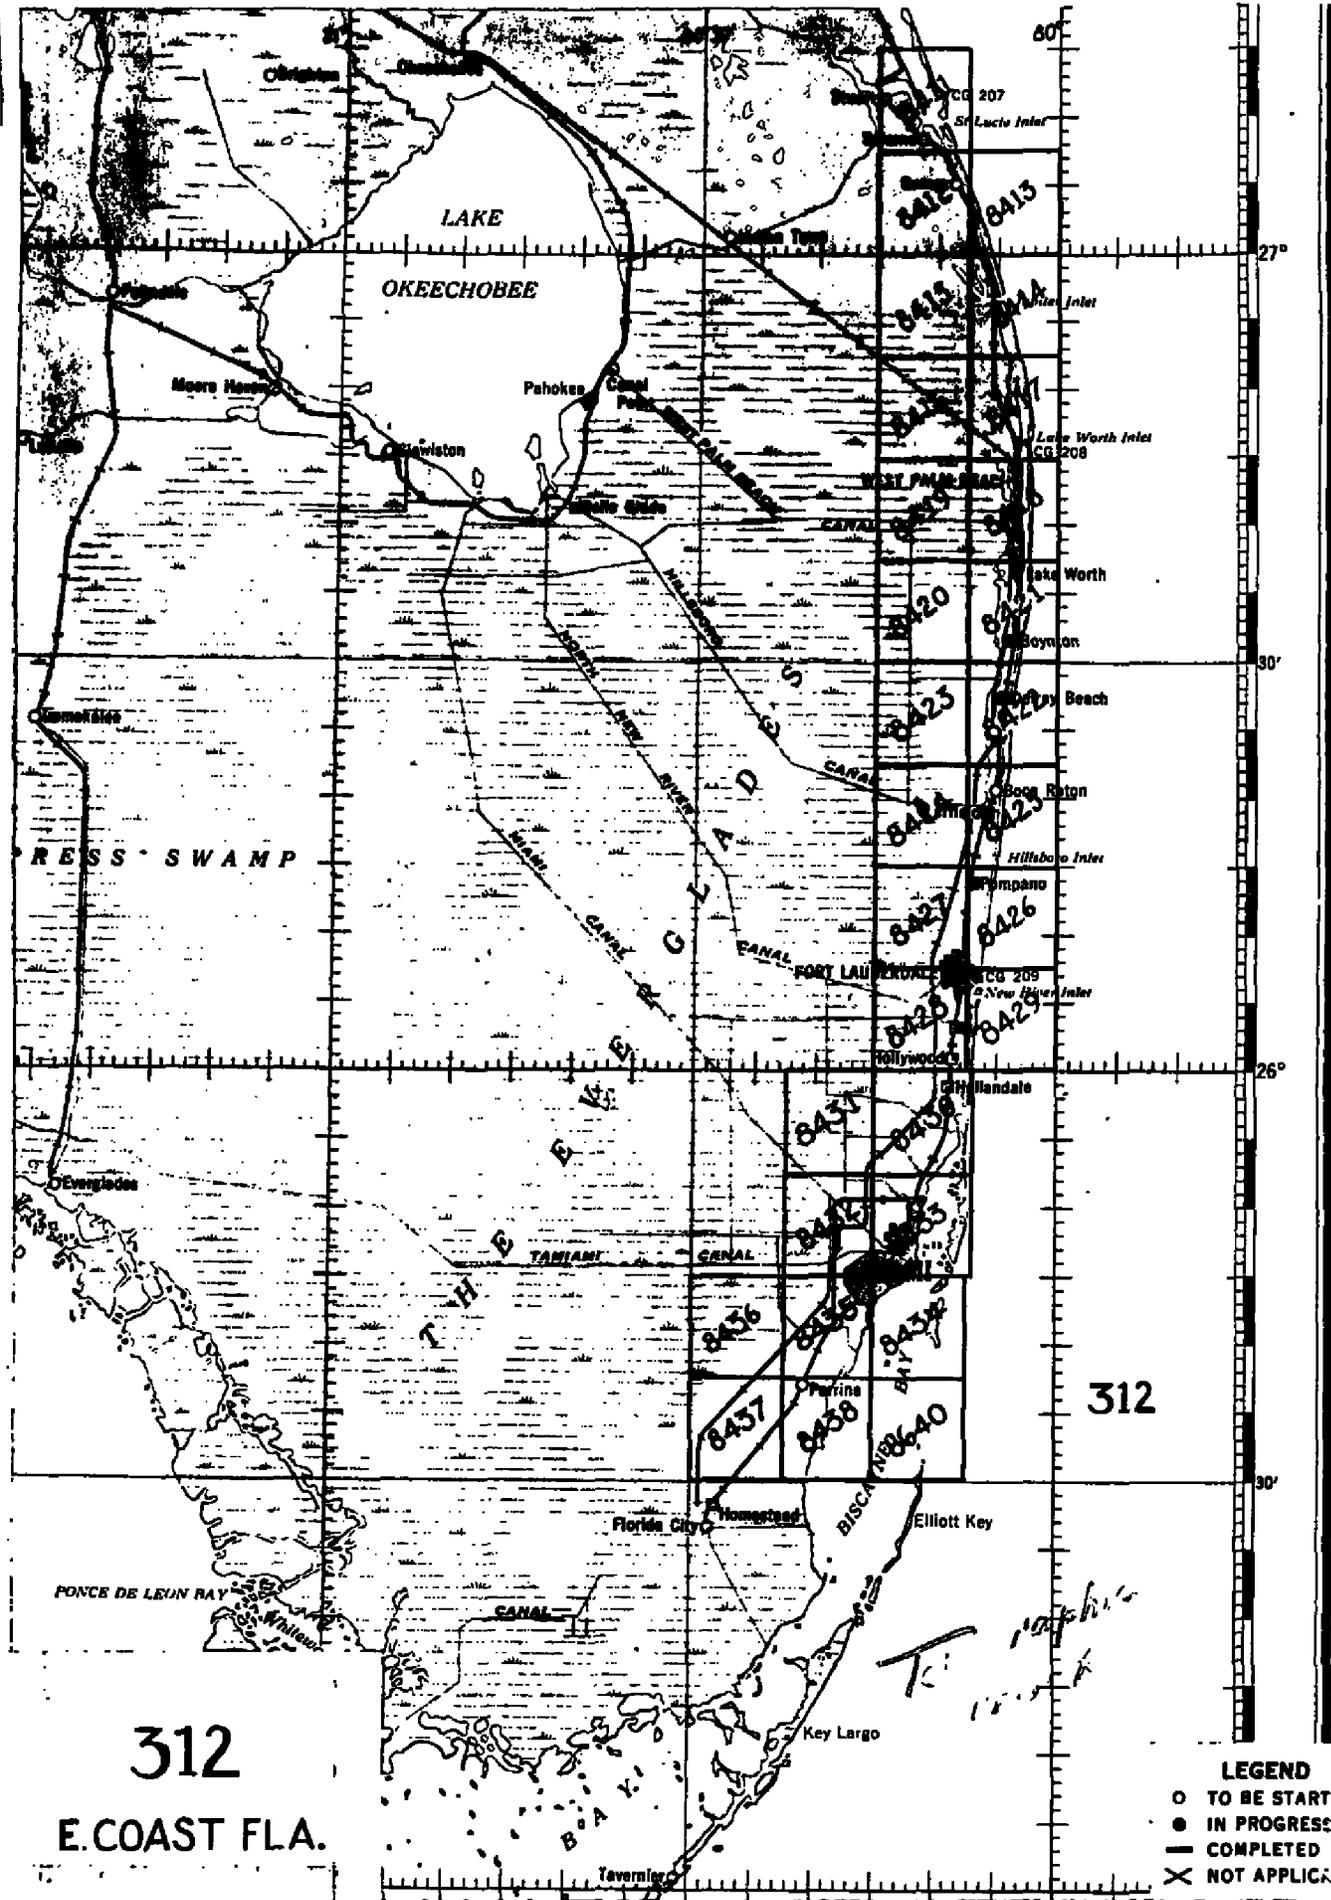

Review and Smooth Drafting:

Since this revision of planimetric map T-5631 is essentially a new shoreline survey with field inspection in September 1945, it is being given a new number and filed as Shoreline Survey T-8594. It will be reviewed in this office as a new survey.

In the process of drafting and reproduction, the inshore planimetric details not covered by field inspection and not revised* will be painted off or eliminated. The new sheet will then be printed and filed in the vault. It will not be published.

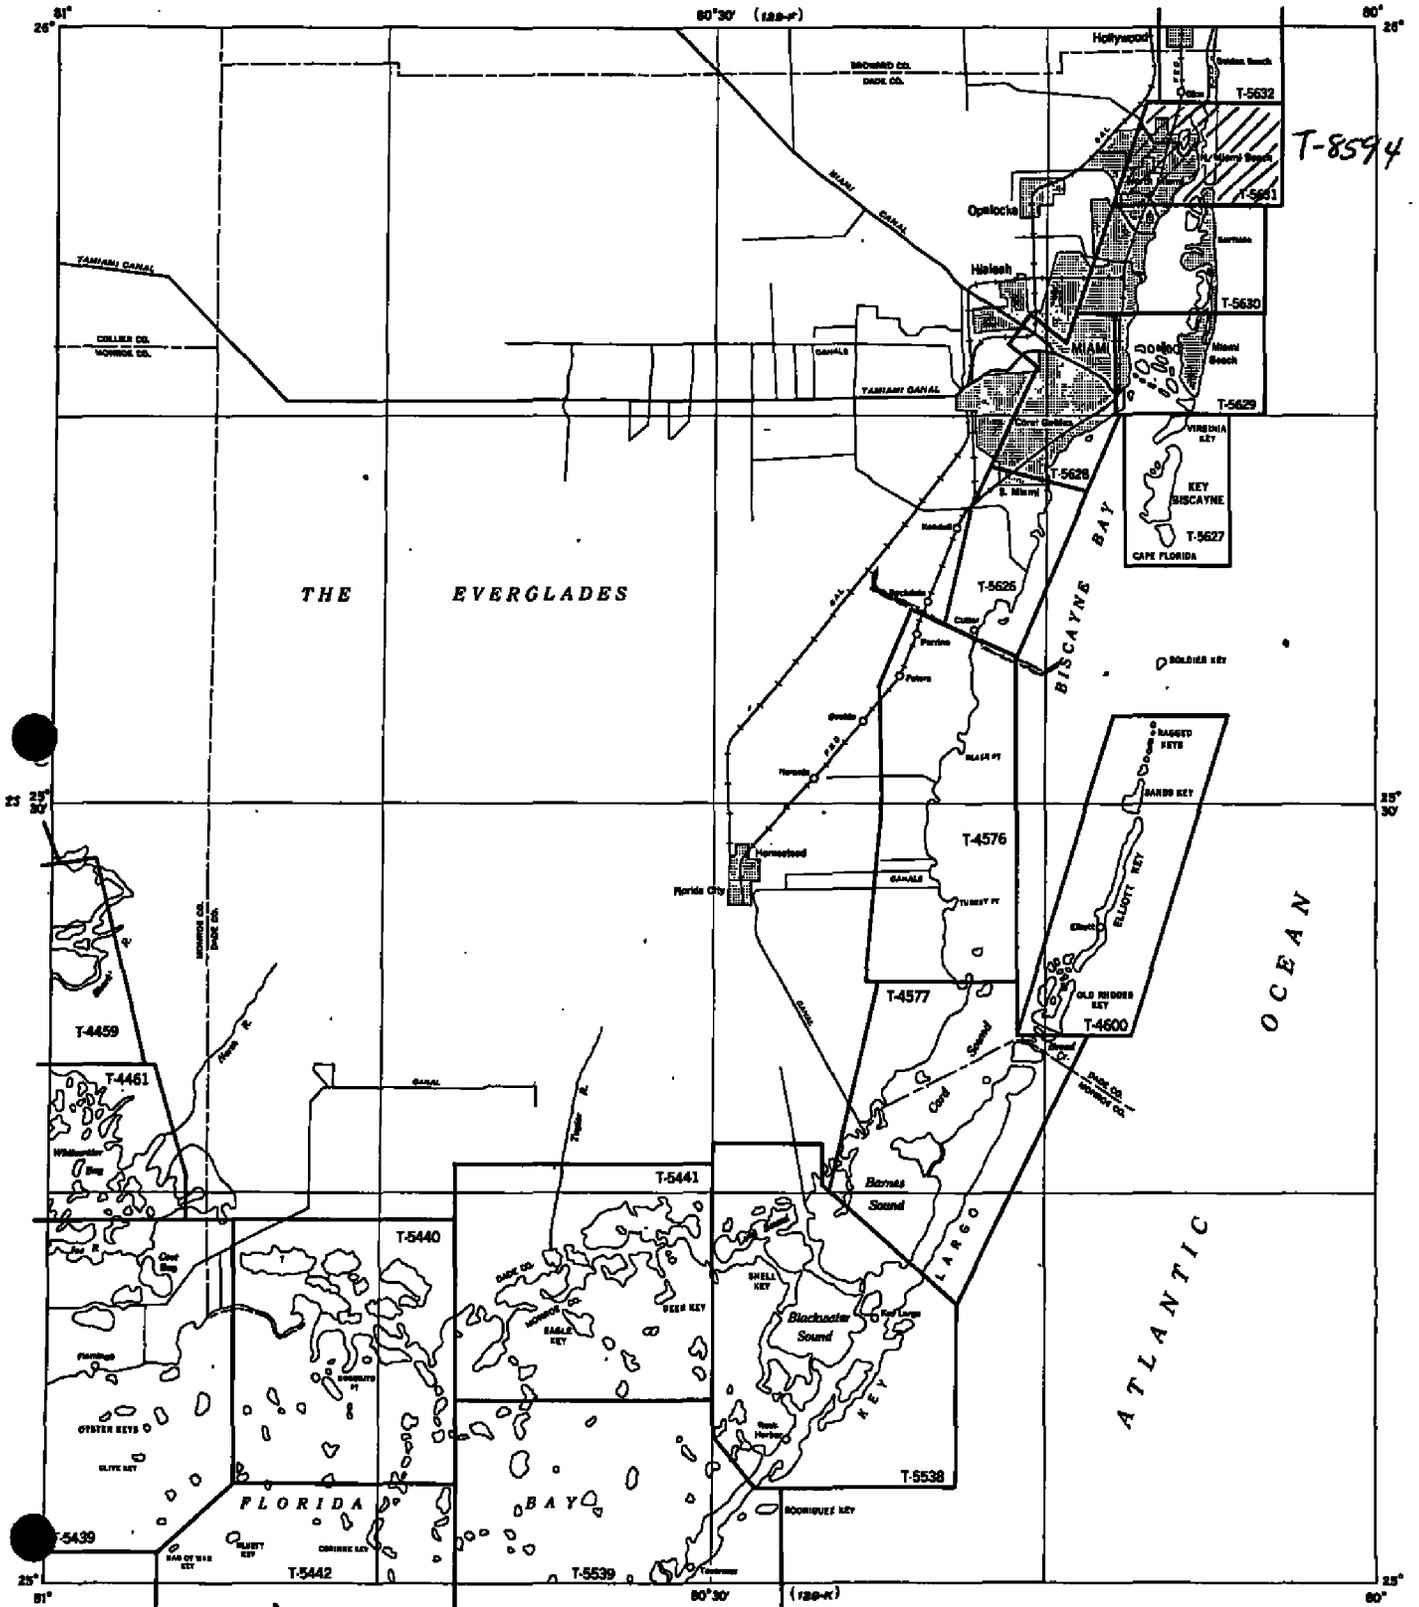

B. S. Jones
B. S. Jones

NONFLOATING AIDS OR LANDMARKS FOR CHARTS

STRIKE OUT ONE

**TO BE CHARTED
Y0/B0/B0/B0/B0/B0/B0**

1101 E. Broadway, Tampa, Fla. December 24, 1945

I recommend that the following objects which ~~have not~~ been inspected from seaward to determine their value as landmarks, be charted on ~~charts~~ the charts indicated.

The positions given have been checked after listing by J.A. Giles *J.A. Giles*
Note: Positions listed as arrived at by "radial plot method" were picked directly on the map manuscript, holding surrounding details for control. J.C. Bose, Lieut. Comdr. *J.C. Bose*

Chief of Party.

Review of Photogrammetric Shoreline Survey T-8594

Division of Photogrammetry

Radial Plot.

Since T-8594 is essentially a revision of the shoreline of the existing planimetric map T-5631, compiled from aerial photographs dated 25 January 1935, a new radial plot was unnecessary.

Three 1:20,000 photographs, 450 1602 to 450 1604 inclusive, dated 9 March 1945 and ratioed to 1:10,000, were orientated by holding to the existing detail.

Detailing.

During this review the revision of detail was verified with the field inspection photographs and minor additions were made to the manuscript with green acid ink. These additions included data from the field inspection photographs and that portion of the shoreline which had been designated by mangrove symbols only on the original planimetric map T-5631. Detailing, inshore of the navigable waterways and west of the limits of this survey, has been brought up to the date of the photographs.

Field Inspection.

This work was accomplished during August and October 1945. Additional field inspection is contemplated in connection with Project 312-B. However, the field inspection is adequate to serve the purpose of this survey.

Comparison with Previous Topographic Surveys.

T-8594 is complete and adequate to supersede those sections of the older surveys which it covers:

T-4527	1:20,000	1927
T-5631	1:10,000	1935

Comparison with Nautical Charts 847 and 1248.

T-8594 has not been applied to the charts prior to this review.

T-8594

This survey shows numerous small changes in physical and cultural features since the date of the last survey.

FIELD EDIT REPORT

PHOTOGRAMMETRIC SHORELINE SURVEY T- 8594

PROJECT CS-312-B

The field edit of this quadrangle was completed during March and April, 1947 by John D. Weiler, Photogrammetrist.

46. Methods - The discrepancy print of this sheet was edited by driving along the Intracoastal Waterway. Since the area is essentially the same as covered by Quadrangle T-8430, most corrections have been made on the latter quadrangle. Specific discrepancy notations on T-8594 have been answered on T-8594. For additional corrections see the field edit sheet and field edit report for T-8430.

47. Adequacy of the Map Manuscript - The map manuscript was adequate and correct except for changes made since the date of the original field inspection.

Attention is called to the following items:

Bay Harbor Island has been completely changed (see T-8430).

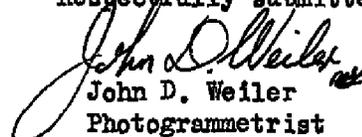

There is a new bridge between Surfside and Bay Harbor

Island (see field edit report for Quad. 8430, "Bridges").

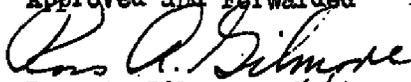

The bridge on Sunny Isles Road just east of U.S. Highway 1 has skiff clearances only.

Bridge Data requested on the Oleta River is shown on Photo C1571. The new bridge, however, on the Sunny Isles Road, is a governing factor and it is recommended that these bridges be shown with skiff clearances only.

Respectfully submitted,

John D. Weiler
Photogrammetrist
