TOTAL 4

Compiled at 1:20,000 scale, from 1:20,000 scale nine-lens photographs taken July, 1950 and June, 1951. For additional nine-lens photography refer to: Air-photo Index A-38 (1:20,000 scale, taken September 1947) Air-photo Index B-3 (1:28,000 scale taken Sept. 1947) Air-photo Index B-13 (1:20,000 scale, taken September 1947 and August 1948)

For single-lens photography on which some field work was done refer to: Air-photo Index A-11 (1:27,500 scale, taken August 1948) Air-photo Index A-23 (1:27,500 scale, taken August, 1948, and 1:40,000 scale, August, 1950) Air-photo Index A-24 (1:27,500 scale, August, 1948) Air-photo Index A-36 (1:40,000 scale, August, 1950)

For photography of other agencies on which some field work was done refer to: Alaskan WAC 64 Index (1949 Naval Petroleum Reserve photography, scale 1:20,000 and 1946 Air-Force TRI-MET photography, scale 1:24,000)

Summary to Accompany Descriptive
Report T-9410 through T-9416

Topographic maps T-9410 through T-9416 in project Ph-28 cover the coastal area of the Chukchi Sea, from Cape Lisburne, eastward to longitude $164^{\circ} 00'$. No shoreline is included on T-9414, T-9415 and T-9416. They are inland maps paralleling the coastline. These maps were compiled on the 9-lens Reading Plotter. Field operations preceding compilation included field inspection, establishment of horizontal control and the determination of elevations required to control a stereo-instrument project vertically. Compilation was at a scale of 1:20,000. Contours were drawn at a 50-foot interval with 25-foot interval supplemental contours. The maps were not field edited.

A Cronan
~~A cloth backed lithographic~~ print of each map at manuscript scale and the combined descriptive report will be registered and permanently filed in the Bureau Archives.

RADIAL PLOT REPORT
(Consolidation)

The area of the seven quadrangles of this report is covered by portions of three separate radial plots that are reported as follows:

T-9410	see Descriptive Report for T-9417 & T-9418
T-9411	"
T-9412	See this report, next page.
T-9413	"
T-9414	"
T-9415	"
T-9416	See Descriptive Report for T-9404 thru T-9409

- 1 -

PHOTOGRAMMETRIC PLOT REPORT

Project Ph-28

Surveys T-9406 & T-9407; T-9412 to T-9415, incl.

21. AREA COVERED

This radial plot covers the areas of Surveys T-9406 and T-9407; T-9412 thru T-9415, incl. These are topographic surveys situated along the shore of the Arctic Ocean from Cape Lisburne to Cape Sabine.

22. METHOD - RADIAL PLOT

Vinylite sheets with polyconic projections in black and Universal Transverse Mercator grids in red; at a scale of 1:20,000, were furnished by the Washington office. No base sheets were needed.

All control stations and substitute stations were plotted using beam compass and meter bar.

A sketch showing the layout of these surveys and the distribution of photograph centers and control is attached to this report.

Photographs:

Nine-lens metal mounted photographs at a scale of 1:20,000 were used in this plot. The thirty (30) photographs used in this radial plot are numbered as follows:

37942 thru 37944 incl.

37949

37957 thru 37968 incl.

37972

37997

38037 thru 38048 incl.

The symbols used on the photographs were given in special instructions for all radial plots using nine-lens photographs which will be used later with a Reading Plotter.

Templets:

Vinylite templets were made from all photographs using a master templet furnished by the Washington office to adjust for errors due to chamber displacements. Radial lines were scratched on the templets with a needle point and the scratches filled in with china marking pencil. Red pencil was used for all shoreline (rectification) pass points and black pencil was used for all other radial lines.

Closure and Adjustment to Control:

The radial plot was constructed directly on the map manuscripts. A preliminary plot was laid to determine which photographs were badly tilted. Photographs 37967 and 38039 were by far the most tilted in the plot. Photograph 38039 was especially bad, and was laid on top of the plot so that it had no very serious effect on the plot.

22. METHOD - RADIAL PLOT (cont'd)Closure and Adjustment to Control (Cont'd)

The final plot was started at the western edge of Survey T-9412 where the positions of pass points and photograph centers had been established in the previous radial plot. The plot was extended eastward holding all control points.

Transfer of Points:

The positions of all centers, pass points, and control stations were pricked on the top templets and circled with 3 mm. blue circles. These positions were established on the remaining templets and on the map manuscripts by drilling down through them with a 0.01 inch jewelers drill. All points were circled on each templet as it was removed and on the manuscript.

23. ADEQUACY OF CONTROL

There is adequate control throughout this radial plot.

In interior areas, especially in Surveys T-9414 and T-9415, the positions established are weak but are believed to be within the required accuracy.

All the control stations were held except as follows:

1. A radial plotted position was established for Sub Point THIRTEEN, 1951. The station, THIRTEEN, 1951 was held in the plot.
2. Station SINGLE, 1951 and WOMEN, 1951 were held slightly off in the plot but in both cases the sub. pts. held.
3. Sub Pt. KIGIK was held off slightly but the station held.
4. Sub Ft. EESOOK, 1951, mentioned in a previous radial plot report as not held was replotted on the manuscript and held in this plot.
5. CURLY, 1951 and Sub Pt. CURLY, 1951 which have considerable elevation were not held on photograph 38039 which was badly tilted.

24. SUPPLEMENTAL DATA

None.

25. PHOTOGRAPHY

Photographic coverage was adequate for all areas of the surveys in this plot except for the southeastern corner of survey T-9415.

The definition of all photography is good.

Tilt determination was not considered necessary for photographs 37967 or 38039.

- 3 -

25. PHOTOGRAPHY (cont'd)

Two collimation marks are missing on photographs 38039 thru 38048. One is in chamber 4 and the other in chamber 8. Their lack may have contributed toward the difficulty encountered in making a tie between the shoreline flight and the interior flight.

26. VERTICAL CONTROL

The following discrepancies were noted during computations of elevations following the establishment of their positions in the radial plot:

PEAK 834 - The horizontal angle from THIRTEEN, 1951 misses the position obtained for PEAK 834 by several degrees. However, the elevation as computed from observations made from the other stations check with that obtained from THIRTEEN, 1951. Therefore, the elevation obtained from THIRTEEN, 1951 was used in weighing the corrected elevations.

PEAK 835 - The horizontal angle from CORWIN, 1951 missed PEAK 835. The horizontal angles from two other stations passed through PEAK 835. The elevation computed from CORWIN failed to check. A check of the photographs revealed another peak which the field man had probably observed from CORWIN, 1951. This peak was identified in the office and called PEAK 835 A.

PEAK 835-A. This peak is office identified. It has an unchecked elevation and should be used with caution.

PEAK 837 - This peak was pricked about 600 meters northwest of the point indicated by the field man on the field photograph. The horizontal angles indicated that it should so be moved. The elevation checks within a tenth of a meter.

PEAK 839 - The elevation obtained from observations made from MURKPUK ECCENTRIC, 1951 was accepted as an unchecked elevation because the horizontal angle checked.

The horizontal angles from KIGIK, 1951 and V-214 missed PEAK 839 by several degrees. Another peak was identified by this office, but the elevations did not check. Therefore, it appears that a different peak was identified from each of the three triangulation stations.

The observations from KIGIK and V-214 were rejected.

PEAK 843 - The elevation obtained for this peak from V-214 was rejected because it did not check with that obtained from three other stations by 85 meters.

The horizontal angle from V-214 to PEAK 843 actually passes through PEAK 850. Therefore, the data obtained for PEAK 943 from V-214 was used in computing the elevation of PEAK 850.

- 4 -

26. VERTICAL CONTROL (Cont'd)

PEAK 845 - The point indicated on the field photograph by the field man doesn't agree with horizontal angles which intersect at a point about 900 meters to the south. Although the computed elevations to the peak indicated on the field photograph check very well from three triangulation stations, the elevation obtained from SPURR, 1951 failed to check by about + 8 meters. The elevation of the office-identified peak located near the intersection of the horizontal angles checks within half a meter from all four of the stations.

PEAK 848 - The elevation obtained for PEAK 848 from SABINE-ASTRO, 1951 failed to check by +6.1 meters. The horizontal angle also failed to check; therefore, the elevation from SABINE-ASTRO was disregarded.

PEAK 850 - This is a checked elevation because it is obvious from the horizontal angles that the observation to PEAK 843, so indicated by the field man, was really made to PEAK 850. The elevation obtained for PEAK 850 from SABINE-ASTRO checks that made supposedly to PEAK 843 by 0.5 meters.

V-2113 - The observation from V-215 to V-2113 was rejected because the horizontal angle missed the position of V-2113 by about 3°.

COMPILATION REPORT31. Delineation:

Contours and cultural features were delineated simultaneously on the Reading Plotters. All the land area of quads T-9410 thru T-9414 has been mapped, but T-9415 has a small area in the SE corner missing, and T-9416 lacks a triangular area being roughly the SE half of the south half of the sheet. The actual area delineated is shown in red on page 5; the unmapped area was not controlled for mapping purposes, nor was it covered with mapping photos.

32. Control: Adequate; see side-headings 23 in both plot reports.

33. Supplemental Data: See separate brochure^s entitled:
"TABULATION OF ELEVATIONS AND COMPUTATIONS OF ELEVATIONS
BY MAP MANUSCRIPTS FOR VERTICAL CONTROL STATIONS"

34. Contours and Drainage:

Photograph quality was good for contouring purposes and no areas of questionable contours remain.

35. Shoreline and Alongshore Details:

The shoreline in the area of this report is very smooth and regular. Inspection was adequate and was used as a guide during instrument delineation. No low-water or shoal lines were located, office or field.

36. Offshore Details: Not applicable since none exist.

37. Landmarks and Aids: None were recommended by the fieldman.

38. Control for Future Surveys:

Nine photo-topo and three hydro-topo stations were field established and photo identified, and have been positioned by the radial plot. They are listed in side-heading 49. 1

39. Junctions:

All junctions are in agreement since all were compiled as segments of the same project. On page 5 it is indicated that no contemporary surveys exist along the south border of the area to which to junction.

40. Horizontal and Vertical Accuracy:

The maps of this report meet the standards established by National Map Accuracy Standards for maps having a scale of 1:20,000 and showing relief by means of a 50ft contour interval. The supplemental 25ft contours employed in the more level areas are of the same accuracy.

46. Comparison with Existing Maps:

"ALASKA RECONNAISSANCE TOPOGRAPHIC SERIES; SECOND JUDICIAL DIVISION, POINT HOPE, ALASKA", 1:250,000, USGS, 1952.

47. Comparison with Nautical Charts:

- a. ARCTIC COASTS, Alaska, No.9400, 1:1,587,870, May 1946, 6th edition, last correction date of 27 Nov 50.
- b. Provisional Chart, CAPE PRINCE OF WALES TO POINT BARROW, CHUKCHI SEA, Alaska-Arctic Coasts, No.9402, 1:750,000, May 1950, 1st edition.

48. Geographic Name List: See next page.

49. Notes for the Hydrographer: See unnumbered page that follows.

50. Compilation Office Review: See T-2 form following.

49. Notes for the Hydrographer:

a. Photo-Topo Stations:

T-9410 =	BAKE, 1951	identified on photo	22733	(1:20,000)
	NIAK, 1951	"	22732	"
T-9411 =	DIKE, 1951	"	48-0-219	(1:10,000)
	GUTUK AZ MK, 1951	"	22822	(1:20,000)
T-9412 =	RUTH, 1951	"	48-0-227	(1:10,000)
	*THIRTEEN AZ MK, 1951	"	BAR 349-085	
T-9413 =	EWIK, 1951	"	48-0-227	(1:10,000)
	MALE, 1951	"	48-0-229	"
	MURKPUK AZ MK	"	22816	(1:20,000)
T-9414 =	SINGLE AZ MK	"	22814	"
T-9415 =	None			
T-9416 =	None			

b. Photo-Hydro Stations:

T-9410 = No.166 identified on photo 22733 (1:20,000), and described as, "W end of the northerly of two rock ledges at Cape Lisburne, on the SW side of the Cape."

T-9411 = None

T-9412 = None

T-9413 = No.167 identified on photo 48-0-231 (1:10,000), and described as, "NE gable of a wooden house at Corwin Mine, the southerly of two houses."

T-9414 = none

T-9415 = None.

T-9416 = None.

* Just south off southern limits of sheet.

PHOTOGRAMMETRIC OFFICE REVIEW

T-9410 thru 9416

1. Projection and grids ☒ 2. Title ☒ 3. Manuscript numbers ☒ 4. Manuscript size ☒

CONTROL STATIONS

5. Horizontal control stations of third-order or higher accuracy ☒ 6. Recoverable horizontal stations of less than third-order accuracy (topographic stations) ☒ 7. Photo hydro stations ☒ 8. Bench marks ☒ 9. Plotting of sextant fixes ☒ 10. Photogrammetric plot report ☒ 11. Detail points ☒

ALONGSHORE AREAS

(Nautical Chart Data)

12. Shoreline ☒ 13. Low-water line ☒ 14. Rocks, shoals, etc. ☒ 15. Bridges ☒ 16. Aids to navigation ☒ 17. Landmarks ☒ 18. Other alongshore physical features ☒ 19. Other along-shore cultural features ☒

PHYSICAL FEATURES

20. Water features ☒ 21. Natural ground cover ☒ 22. Planetable contours ☒ 23. Stereoscopic instrument contours ☒ 24. Contours in general ☒ 25. Spot elevations ☒ 26. Other physical features ☒

CULTURAL FEATURES

27. Roads ☒ 28. Buildings ☒ 29. Railroads ☒ 30. Other cultural features ☒

BOUNDARIES

31. Boundary lines ☒ 32. Public land lines ☒

MISCELLANEOUS

33. Geographic names ☒ 34. Junctions ☒ 35. Legibility of the manuscript ☒ 36. Discrepancy overlay ☒ 37. Descriptive Report ☒ 38. Field inspection photographs ☒ 39. Forms ☒ 40. ☒

Supervisor

43. Remarks:

M-2623-12

Review Report T-9410 through T-9416
Topographic Maps
14 February 1955

62. Comparison with Registered Topographic Surveys:

T-2337 rec. 1:1,000,000 1898

The area of these surveys is covered by T-2337 which is a reconnaissance sketch credited to the work of a native attached to the survey party.

63. Comparison with Maps of Other Agencies:

Point Hope, Alaska (Reconnaissance)
U.S.G.S., 1:250,000, 1952
DeLong Mountains, Alaska (Reconnaissance)
U.S.G.S., 1:250,000, 1951

No effective comparison can be made between these surveys and the U.S.G.S. surveys because of the small scale and generalized detail of the latter.

64. Comparison with Contemporary Hydrographic Surveys:

No hydrographic surveys by the Bureau have been accomplished in the area of these maps.

65. Comparison with Nautical Charts:

9400, 1:1,587,870, corrected to 6/30/52

There are no critical differences between the maps and the chart.

66. Adequacy of Results and Future Surveys:

These maps are adequate for use in hydrographic surveys and the construction of nautical charts. These maps meet the National Standards of Map Accuracy.
