Summary to Accompany
Descriptive Report T-9755 to 57 Inc.

Planimetric project Ph-29(47) consists of 76 maps, scale 1:20,000, - 26 in Part I (Jago River westward to Jones Islands); 43 in Part II (Jones Islands westward to Point Barrow; 7 in Part III (Canadian boundary, westward to Jago River.) Part III was added to the project in 1952.

This project was designed as surveys for new nautical charts at a much larger scale than the present nautical chart, and to furnish bases to the U. S. Geological Survey for projected topographic maps.

Manuscripts T-9755 to 57 inc. includes the shoreline of Beaufort Sea from Smith Bay eastward to the vicinity of Pitt Point.

When all the map manuscripts in the project have been reviewed, smooth-drafted, reproduced, and registered, a Completion Report will be filed in the Bureau Archives. This report will discuss the project in its entirety.

PHOTOGRAMMETRIC PLOT REPORT
Map Manuscripts Nos. T-9755 to T-9757 and T-9762 to T-9765
Project Ph-29(47) II

This radial plot covers an area approximately 9 miles wide along the shore of Beaufort Sea, North Arctic Coast, Alaska from Smith Bay to Cape Halkett and comprises Map Manuscripts Nos. T-9755 to T-9757 and T-9762 to T-9765. The methods used and the results obtained are in general similar to those described in the combined Photogrammetric Plot Report for T-9773 to T-9775 and T-9778 to T-9785 which is included in the Descriptive Report for T-9773 to T-9775.

References in the above report pertaining to offshore barrier islands are not applicable to this radial plot.

Photograph coverage was complete except for the extreme south part of T-9763.

COMPILATION REPORT
Map Manuscripts Nos. T-9755 to T-9757
Project Ph-29(47) II

These three map manuscripts include the planimetric details along the shore of the Beaufort Sea, north Arctic Coast, Alaska from Drew Point to Escook. There are no offshore barrier islands in this area and the character of the planimetry of the mainland is similar to areas previously compiled for this project.

Side headings 32, 34, 35, 36, 39, 40, 46, and 47 of the Descriptive Report for T-9773 to T-9775 and of the Descriptive Report for T-9778 to T-9785 are in general applicable except for remarks pertaining to offshore barrier islands.

33. Supplemental data.

There were no supplemental data.

35. Shoreline and alongshore details.

An exception to remarks contained in side heading 35 of the above references is:

Sketches made in the field and shown on the reverse side of the field photographs gave detailed delineation of the mean high-water line at numerous places.

37. Landmarks and aids.

The special report referred to in paragraph "A" side heading IX of the field inspection report was not furnished this office. L 315 (1951)

38. Control for future surveys.

Not applicable. Refer to side headings XI and XIV of the field inspection report.

Review Report T-9755 to 57 Inc.
Planimetric Maps
2 February 1953

62. Comparison with Registered Surveys: There are no earlier surveys for this area.
63. Comparison with Maps of Other Agencies: None
64. Comparison with Contemporary Hydrographic Surveys:

H-7921 1:40,000 1951 (Kolorik to Cape Simpson)

This survey was returned to the field for additional work during the 1952 season.

H-7922 1:40,000 1951-52 (Esook to Kolorik)

No shoreline is shown on either of these surveys.

Offshore from Kokruakrok campsite (T-9756) a submerged sandbar ($70^{\circ} 55' 18'' / 153^{\circ} 03'$) is indicated by soundings. Photograph 20064 affords evidence of its existence, but it was not added to T-9756. The descriptive report for H-7922 says that the area between the coast and this bar furnishes safe anchorage for small craft.

Within the limits of T-9757 the hydrographic survey records two areas of minus soundings and a covered sandbar:

1. $-0\frac{1}{2}$ at $70^{\circ} 54' 25'' / 152^{\circ} 59' 20''$
2. -1 at $70^{\circ} 52' 50'' / 152^{\circ} 31' 03''$
3. A sandbar which covers about 4 feet at
 $70^{\circ} 54' 08'' / 152^{\circ} 41'$

They were not transferred to T-9757.

Two landmark areas fall ^{in this group} on T-9757; the group of buildings belonging to Howard Leavitt at Kolorik, ^{on T-9756} and the buildings at the abandoned trading post Esook, ^{on T-9757}. They are labeled on H-7922.

65. Comparison with Nautical Charts:

9400 1:1,587,870 @ 70° May 1947, rev. June, 1952.

No record is attached to the descriptive report to indicate that these map manuscripts have been applied to charts prior to review.

The small scale of the chart affords little basis for comparison of detail.

66. Accuracy: These three map manuscripts fall within a well controlled area. They are well delineated and meet the National Map Accuracy requirements..

HORIZONTAL DATUM ADJUSTMENT

ARCTIC OCEAN AREA, ALASKA

Corrections to Preliminary N.A. 1927 Datum from the various independent horizontal datums on the north coast of Alaska have been determined by the Division of Geodesy, being computed from field positions, allowing for closure in azimuth and length. This procedure was started from adjusted N.A. 1927 Datum stations at about the 63rd Parallel on the Canadian Boundary, followed the 141st Meridian (IBG Datum) to Beaufort Sea (Arctic Ocean), thence westward through the Barter Island 1948, Flaxman Island and Point Barrow 1945 Datums to a connection with adjusted N.A. 1927 Datum in the area of Kotzebue Sound, off Chukchi Sea. The position of the stations in this area is subject to further adjustment after more geodetic field work.

PLANIMETRIC MAPPING PROJECT

Ph-29(47) PART II

Point Barrow to Jones Island, Alaska

T-9743 thru T-9785

T-9743 thru T-9772: Point Barrow 1945 Datum, correction to Preliminary N.A. 1927 Datum in Latitude is +1.30 sec. on all the maps, and in Longitude, ranges from -14.93 sec. on T-9743 to -15.26 sec. on T-9772. These corrections were converted into meters, and stamped on page T-2 of each Descriptive Report, and near the title block of each manuscript and registered cloth-backed map, with the following stamp:

T-9773 thru T-9785: Flaxman Island Datum, correction to Preliminary N.A. 1927 Datum use ranges from -1.26 sec. on T-9777 to -3.00 sec. on T-9782, and in Longitude from plus 8.95 sec. on T-9777 to plus 9.90 sec. on T-9782. These corrections were stamped on page T-2 of each Descriptive Report, and near the title block of each manuscript and cloth-backed registered map, with the exception that the cloth-backed maps have not been completed for T-9777, T-9779 thru 9782, and T-9784-9785. When these maps are completed they should be stamped the same as have been their descriptive reports, with the following stamp:

The difference between Point Barrow 1945 Datum
and preliminary N.A. 1927 Datum is Lat. plus/minus
X m. and Long. plus/minus X m.

See the Special Report on HORIZONTAL DATUM ADJUSTMENT for Ph-29(47), Parts I, II, & III, filed with the completion report for a project index showing the correction for each map.
