Summary to Accompany T-9769 - 72, Incl.

Planimetric project Ph-29(47) consists of 76 maps, scale 1:20,000; 26 in Part I (Barter Island westward to Jones Islands); 43 in Part II (Jones Islands westward to Point Barrow); and 7 in Part III (US-Can. Boundary, westward to Barter Island).

This project was designed as surveys for new nautical charts at a much larger scale than the present regional chart, and to furnish bases to the U.S. Geological Survey for projected topographic maps.

T-9769 to 72 includes the western shore of Harrison Bay, i.e., from about 5 miles south of Cape Halkett to about 3 miles south of Atigara Point.

When all the map manuscripts in this project have been reviewed, smooth-drafted, reproduced, and registered, a Completion Report will be filed in the Bureau Archives. This report will describe the project as a whole, and will list the materials received, with a statement regarding their disposition.

PHOTOGRAMMETRIC PLOT REPORT

Map Manuscripts T-9769 thru T-9772, T-9776 & T-9777

Project Ph-29 (47) II

21. Area Covered

This radial plot covers a strip of land along the North Arctic Coast from about 2.5 miles south of Cape Halkett to about 9.0 miles west of the Colville River and includes the shorelines of Harrison Bay and the Kogru River. It comprises map manuscripts T-9769 thru T-9772, T-9776 and T-9777.

22. Through 25.

In general Items 22 thru 25 of the Photogrammetric Plot Report for Map Manuscripts No's. T-9743 thru T-9754 and T-9758, Project Ph-29 (47) II which is included in the Descriptive Report for Map Manuscripts T-9743 thru T-9746 are applicable. The following exceptions are noted:

References to damaged map manuscripts do not apply.

It was necessary to extend the projection for T-9769 eight minutes easterly so that the shoreline of Harrison Bay would be covered.

The southwest limits of T-9776 could not be completed because of insufficient photograph coverage.

A radial plot was first completed for T-9769 thru T-9772 which are on "Point Barrow 1945" datum. T-9776 and T-9777 are on "Flaxman Island 1912" datum. Geographic positions for triangulation stations ATIGARU, 1951 and AKULIK, 1951 were furnished on both datums. These two stations fall within the limits of T-9772.

In order to make a radial plot junction the projection for T-9777 was extended northward to include Latitude $70^{\circ} 33'$ and these two stations were plotted on the "Flaxman Island 1912" datum. A straight line was then drawn between these plotted positions. Also a straight line was drawn between the plotted positions of these two stations, (Point Barrow 1912 datum) on T-9772. These two straight lines and the plotted positions of the two stations on both datums were then coincided and the two sheets were fastened together with cellulose tape. T-9776 was then joined on the west of T-9777 by matching meridians and parallels common to each sheet. The pass points at the junction or along the south limits of T-9771 and T-9772 which were established in the radial plot for T-9769 thru T-9772 were then transfer-

red to T-9776 and T-9777 and the radial plot was completed for these two sheets on the "Flaxman Island 1912" datum.

When making a junction to the east with the previous radial plot for T-9778 it was necessary to make slight adjustments in that plot west of Longitude $152^{\circ} 20'$ because of the identification of additional control stations during the 1952 field season.

For station "LAMB, 1952", distance in meters to the sub-station ^{T-9770} is in error. The distance in feet was used and held in radial plot.

At "KOGRU EAST BASE, 1952", sub-stations would not hold. By ^{T-9772} swinging arcs from each of the three identified sub-stations, using as radii the distances entered on the pricking card, the arcs failed to meet at a common point of intersection by several hundred meters. The difficulties were not resolved.

At station "IDONO, 1951", there is an apparent discrepancy between the diagram on the pricking card for sub-station "b" and the description of the station. The description indicates R.M. 1 is to the west of the station and the pricking card places the R.M. 1 to the east. Several attempts were made to reconcile this difference. If the assumption is made that the instrument occupied the R.M. 1 mark and the observations were made with the station as zero, the relation of the sub-stations, the station, and R.M. 1 is in general agreement with the sketch. The position of sub-station "b" computed and plotted with this assumption could be held.

COMPILATION REPORT

Map Manuscripts T-9769 thru T-9772

Project Ph-29 (47) II

These four map manuscripts portray the shoreline and planimetric details approximately seven miles interior along the North Arctic Coast from 2.5 miles south of Cape Halkett to 2.5 miles south of Atigaru Point.

In general Items 31 thru 47 of the Compilation Report for Map Manuscripts T-9743 thru T-9746, Project Ph-29 (47) II are applicable. Exceptions are noted in the following paragraphs.

35: Shoreline and alongshore details.

There was no field inspection of the mean high-water line at any place in the area of these four map manuscripts. This interpretation was made by stereoscopic study of the photographs aided by experience gained when compiling similar areas in this project where some data on the mean high-water line was obtained by field inspection.

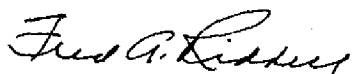

Refer to remarks in field inspection report Paragraph VII.

39: Junctions:

Satisfactory junctions have been made between all map manuscripts included in this compilation report and with all other adjoining map manuscripts.

The junction of planimetry between the "Point Barrow 1945" datum and the "Flaxman Island 1912" datum was made at about Latitude $70^{\circ} 30'$. When matching planimetry between T-9771 and T-9776 and between T-9772 and T-9777 disregard the projection lines and coincide common pass points and triangulation stations in the junction area. Also coincide Latitude $70^{\circ} 30'$ on T-9771 and T-9772 (Point Barrow 1945 datum) with match line shown in red ink on both T-9776 and T-9777. .

48. Geographic Names:

The geographic names Report listed under Item XIV of the field report "Shoreline - Photogrammetric, Alaska, North Arctic Coast, Cape Halkett to Colville River 1952", was not furnished the Photogrammetric Office.

Names shown on the map manuscripts were obtained from the nautical chart, various other maps and descriptions of stations and are shown for location purposes only.

FIELD COMPLETION ADDITIONS AND CORRECTIONS TO THE MANUSCRIPT

42. Additions and corrections furnished by the field completion survey have been applied to the manuscript. The manuscript is now complete except as noted under item 43.

Compiler

Supervisor

43. Remarks:

Review Report T-9769 to 72, incl.

61. General.--These maps cover a low area of little relief so that even the so-called "higher tundra" is wet, though the "polygon" pattern is not so prominent here as elsewhere; and the "lower tundra" appears to have more water than vegetation, in places.

62. Comparison with Registered Surveys.--No earlier surveys exist for this area.

63. Comparison with Maps of Other Agencies.--

USGS Harrison Bay, Alas. (Recon) 1:250,000, ed. 1951.
Astronomic Datum.

The small scale of the quadrangles precludes more than a general comparison, and this discloses no major difference. No contours are drawn in the area.

64. Comparison with Contemporary Hydrographic Surveys.--

H-7991 (ARN 4152) 1:40,000, 1952, Harrison Bay, Cape
Halkett to Atigaru Point.

No shoreline was drawn on this survey, but soundings are not in conflict with the shoreline on T-9769-72, nor ^{with?} to the soundings recorded on field inspection photographs covering Kogru River and its mouth, and the Point Comfort area.

These field inspection photographs are:

{	20087, Point Comfort,		
	20089, Kogru R. 151° 53' to 152° 03½'	Aug. 6, 1952	
	20088 " " 152° 03' to 152° 17'	Aug. 4, 1952	1000-1100
	19924 " " 152° 19' to 152° 36'	Aug. 5, 1952	0930-1030
	ARN 4252 east of H-7991	Not available	
	ARN 4352 " " ARN 4252	Not available.	

65. Comparison with Nautical Charts.--

9400 1:1,587,870, at 70° ed. May 1947, rev. June 1952

The small scale of the chart affords little basis for comparison.

66. Accuracy.--Effective control is well distributed in the radial plot, and delineation is as accurate as office interpretation can give, so that this group of maps meet the needs of Arctic charting.

HORIZONTAL DATUM ADJUSTMENT

ARCTIC OCEAN AREA, ALASKA

Corrections to Preliminary N.A. 1927 Datum from the various independent horizontal datums on the north coast of Alaska have been determined by the Division of Geodesy, being computed from field positions, allowing for closure in azimuth and length. This procedure was started from adjusted N.A. 1927 Datum stations at about the 63rd Parallel on the Canadian Boundary, followed the 141st Meridian (IBC Datum) to Beaufort Sea (Arctic Ocean), thence westward through the Barter Island 1948, Flaxman Island and Point Barrow 1945 Datums to a connection with adjusted N.A. 1927 Datum in the area of Kotzebue Sound, off Chukchi Sea. The position of the stations in this area is subject to further adjustment after more geodetic field work.

PLANIMETRIC MAPPING PROJECT

Ph-29(47) PART II

Point Barrow to Jones Island, Alaska

T-9743 thru T-9785

T-9743 thru T-9772: Point Barrow 1945 Datum, correction to Preliminary N.A. 1927 Datum in Latitude is +1.30 sec. on all the maps, and in Longitude, ranges from -14.93 sec. on T-9743 to -15.26 sec. on T-9772. These corrections were converted into meters, and stamped on page T-2 of each Descriptive Report, and near the title block of each manuscript and registered cloth-backed map, with the following stamp:

T-9773 thru T-9785: Flaxman Island Datum, correction to Preliminary N.A. 1927 Datum use ranges from -1.26 sec. on T-9777 to -3.00 sec. on T-9782, and in Longitude from plus 8.95 sec. on T-9777 to plus 9.90 sec. on T-9782. These corrections were stamped on page T-2 of each Descriptive Report, and near the title block of each manuscript and cloth-backed registered map, with the exception that the cloth-backed maps have not been completed for T-9777, T-9779 thru 9782, and T-9784-9785. When these maps are completed they should be stamped the same as have been their descriptive reports, with the following stamp:

The difference between Point Barrow, 1945 Datum
and preliminary N.A. 1927 Datum is Lat. plus/~~minus~~
~~X~~m. and Long. ~~plus~~/minus ~~X~~m.

See the Special Report on HORIZONTAL DATUM ADJUSTMENT for Ph-29(47), Parts I, II, & III, filed with the completion report for a project index showing the correction for each map.
