SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT TP-00181

Shoreline survey TP-00181 is one of four 1:5,000 scale manuscripts added to Project PH-6603. These four sheets cover Port Jefferson and Mt. Sinai Harbor. This sheet is just west of the entrance to Port Jefferson.

This area was field inspected in June, 1966 for survey T-12390 (Registered) at 1:10,000 scale. The field inspection consisted of identification of horizontal control, shoreline and interior inspection, location of fixed aids to navigation and a Geographic Names Investigation. Job PH-6603
PART I

Compilation was at 1:5,000 scale by B-8 plotter using September, 1970 photography. Hydrography was completed prior to compilation therefore no specially prepared photos were ordered or made. See Instructions - Office - PH-6603 Supplement I 5.02 dated April 1, 1971. These were interpreted, by the compiler, to mean no photo centers were required. A field edit ozalid and two clean ozalids plus a set of matte ratio prints were sent for the use of the field editor.

After the application of field edit, the manuscript was scribed, stuck-up and reproduced on cronaflex. Final review was accomplished without the benefit of photo centers, at AMC during August, 1973. One cronaflex copy and a negative of the final reviewed manuscript are forwarded for record and registry.

FIELD INSPECTION

Area was field inspected under T-12390 dated June, 1966.

Photogrammetric Plot Report
Job PH-6603
Port Jefferson, New York

21. Area Covered This project covers an area of Long Island, New York, from Crane Neck Point to Sound Beach. Included in this area are shoreline surveys TP-00181 through TP-00184.

22. Method Two bridges were run on the C-8 Stereoplanigraph to provide control for the compilation of the area. The bridges were adjusted to the Lambert projection in the Long Island zone. All pass points and control were plotted on the Coradimat. Strip #1 was adjusted on five horizontal control points with two additional control points and three tie points as checks. Strip #2 was adjusted on three horizontal control points with four additional control points and three tie points as checks.

23. Adequacy of Control The horizontal control, which was provided, complied with project instructions and was adequate for bridging. All control held within National Map Accuracy Standards.

24. Supplemental Data Local USGS quads were used to provide rough vertical control for bridging purposes.

25. Photography All photography was adequate as to coverage, overlap and definition.

NOTES FOR THE FIELD EDITOR

These four 1:5,000 scale sheets were previously mapped as T-12390 at 1:10,000 scale and T-12396 at 1:20,000 scale. They have been finally reviewed. Field edit ~~of~~^{of} the shoreline and interior details for these two sheets was done during 1967 and 1968 and was applied prior to final review.

Additional field edit of the mean high water line for these four sheets will be required. The Sept. 1970 photos indicate several berm lines on the beaches and other apparent shoreline changes, making an accurate delineation of the mean high water line difficult. An interior field edit is not required.

The mean high water line may be edited by measurements to the line from photo points or by delineating it on the matte ratios furnished.

FIELD EDIT REPORT
Job PH-6603
PORT JEFFERSON AND MT. SINAI
HARBOR, LONG ISLAND, NEW YORK

This report is submitted for Manuscript No. TP 00181.
The field edit for this sheet was completed April, 1972, with
some delays encountered due to bad weather.

52. ADEQUACY OF COMPILATION

The compilation was generally good, except for some
bath houses that were plotted as a seawall and 3 walkways
and a fallen tree plotted as groins. When field edit
corrections, additions, and deletions have been applied
compilation will be adequate.

54. RECOMMENDATIONS

None.

56. SHORELINE AND ALONGSHORE FEATURES

The mean high water line was indicated by frequent
measurements from photo points pricked on photos 70L 8465,
8467, and 8498.

All changes to the manuscript are indicated on these
three photos and/or the manuscript, and are cross referenced.

58. LANDMARKS AND AIDS

There were no aids indicated on this sheet.

59. GENERAL STATEMENT

All field edit notes have been made in Violet ink on the
field edit sheet and ratio photographs.

12 May 1972
Submitted by:

Arthur R. Bricknell

ARTHUR R. BRICKNELL
Surveying Technician

REVIEW REPORT TP-00181

SHORELINE

August, 1973

61. GENERAL STATEMENT

There are numerous charted rocks, both sunken and awash, in the vicinity of Crane Neck Point. Neither of the field inspections of 1967 or 1972 gave data pertaining to these. Wave action on the 1970 photography, which was taken at between five and six feet (predicted) above MLW made positive identification of most of these rocks impossible. Some rocks were visible and shown on the manuscript with no height.

See summary which is page 6 of the Descriptive Report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS

Comparison was made with T-12390 PH-6603 1:10,000 scale and reviewed and registered in 1969. There is very good agreement with the exception of minor natural changes of MHW line along sandy beaches. TP-00181 supersedes all previous registered surveys and should be used for nautical chart construction purposes.

63. COMPARISON WITH MAPS OF OTHER AGENCIES

A visual comparison was made with U.S.G.S. Quadrangle St. James, NY, 1:24,000 scale, dated 1967. There is good agreement.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS

Comparison was made with smooth sheet 8951 dated 1967 at 1:10,000 scale. Rock shown on this sheet, in Crane Neck Point area are numerous. This sheet should be used for rock information since these rocks are not visible on the photography, taken at near predicted high tide. Differences are noted on the discrepancy print in purple. *See note page 18*

65. COMPARISON WITH NAUTICAL CHARTS

A visual comparison was made with Chart 117-SC, 12th edition dated November, 1972 at 1:40,000 scale. Agreement is very good except for rock information at Crane Neck Point.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS

This survey complies with instructions and meets the National Standards of Map Accuracy.

Rocks in the vicinity of Crane Neck Point bear further investigation in future surveys.
