SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORTS
TP-00440A and TP-00440B

These two maps TP-00440A, 1:30,000 scale and its inset TP-00440B, 1:10,000 scale, are part of project CM-7705, Keweenaw Waterway, Keweenaw Bay, Marquette Harbor, Michigan and Ashland, Wisconsin which consist of four maps and three insets.

This project is divided into three different geographic areas. Part I, Ashland Harbor, Chequamegon Bay, Lake Superior, Wisconsin, longitude 90°49'49.7" west to 90°57'17.3", latitude 46°34'38.4" north to 46°40'36". Part II, L'Anse, Michigan latitude 46°44'46" to the north entrance of the Keweenaw Waterway, Michigan, latitude 47°15'37". Part III Marquette Bay, Lake Superior, Michigan, latitude 46°30'12" north to latitude 46°36'54".

Field work prior to compilation which was accomplished in July 1978 involved the identification of horizontal control by photo identification methods, to meet aerotriangulation requirements.

Photographic coverage was provided in May 1977 using the "E" camera with a focal length of 152.71 millimeters with panchromatic film at 1:20,000 scale and June 1978 with the "Y" camera with a focal length of 88.72 millimeters at 1:50,000 scale. Photographs were provided to aerotriangulation for bridging.

Analytic aerotriangulation was performed at the Washington Science Center in October 1979.

Compilation was performed at the Atlantic Marine Center in January 1980 from office interpretation of the May 1977 1:20,000 scale photography and the June 1978 1:50,000 scale photography.

Field edit accomplished during May 1981 consisted of a visual examination to check for completeness, and to answer questions and to clarify details.

Field edit was applied as partial during August 1982 at the Atlantic Marine Center. The map was kept as Class III since the edit was not complete and no field checks for accuracy were made.

Final review was performed at the Atlantic Marine Center in January 1984.

These two maps are to be registered together as one, as Final Class III maps.

This descriptive report is segmented in prescribed arrangement and contains all the pertinent information without duplication in the construction of these two maps.

The original base manuscripts and relevant data was forwarded to the Washington Science Center for final registration.

FIELD INSPECTION

TP-00440A & TP-00440B

There was no field inspection prior to compilation. Field work accomplished was limited to the recovery and identification of the horizontal control necessary for the aerotriangulation of the project.

Photogrammetric Plot Report

Keweenaw, Michigan

CM-7705

October 11, 1979

21. Area Covered

The area covered by this report extends from L'Anse Bay up to Lake Superior near Calumet. This area is covered by two 1:30,000 scale sheets; TP-00440 and TP-00441, including three insets which are at a scale of 1:10,000.

22. Method

Three strips of 1:50,000 scale black and white photography were bridged by analytic aerotriangulation methods. The strips of bridging photography were controlled by field identified control. Tie points were used in all strips to insure an adequate junction of all strips during the strip adjustments. Ratio photos of compilation photography was ordered.

23. Adequacy of Control

This office has often experienced problems in adjusting strips to ground control points in the Great Lakes area. Usually the problems are in the order of 10 to 15 feet and are well within the National Map Accuracy Standards but in this Great Lakes area our strip adjustments are not as good as in other areas.

In the Keweenaw part of this project, CM-7705, we were not able to resolve the control problem but fortunately we were able to omit the problem area.

Originally, strip 1 contained 14 photos with five control station. The north terminal for this strip was Calumet, 1939. In the strip adjustment, the two sub points for Calumet differed by 24 feet. When using sub point #1 of Calumet, the next control station in the strip, Torch Lake, 1935 was off by about 16 feet. If sub point #2 of Calumet was held, Torch Lake was off by 33 feet. Note that in mensuration, the image of Calumet sub point #1 could not be positively identified, but the image of sub point #2 could be positively identified.

This office requested additional control identification by a field party. Two sub points were identified for Section Corner (Glo Mich. GS) 1934. These sub points would not fit in the adjustment. They were both off by at least 1200 feet.

The control discrepancy could not be resolved. It was decided to delete the 3 photos at the north end of the strip that covered Calumet and Section Corner. This left sufficient photo coverage for shoreline compilation. The remainder of strip #1 and the other two strips in this Keweenaw area fit quite well with the ground control.

24. Supplemental Data

USGS quadrangles were used to provide vertical control for the adjustment.

25. Photography

The coverage, overlap, and quality of the photography was adequate for the job.

COMPILATION REPORT

TP-00440A

31 - DELINEATION

Delineation was done on the Wild B-8 stereoplotter using 1:20,000 scale and 1:50,000 scale panchromatic photography. The quality was good and coverage adequate except for an area to the north east which prevented completion of compilation to the limit of the manuscript.

32 - CONTROL

Refer to the Photogrammetric Plot Report, dated October 11, 1979.

33 - SUPPLEMENTAL DATA

None.

34 - CONTOURS AND DRAINAGE

Contours are not applicable to the project. Drainage was delineated by the Wild B-8 stereoplotter and by office stereoscopic interpretation of the ratioed photographs.

35 - SHORELINE AND ALONGSHORE DETAILS

Delineation was done on the Wild B-8 stereoplotter and office inspection of the ratioed photographs.

36 - OFFSHORE DETAILS

Delineation was done on the Wild B-8 stereoplotter.

37 - LANDMARKS AND AIDS

Appropriate copies of 76-40's are submitted with this descriptive report.

38 - CONTROL FOR FUTURE SURVEYS

None.

39 - JUNCTIONS

Refer to the Data Record Form 76-36B, item 5 of this Descriptive Report.

TP-00440A

40 - HORIZONTAL AND VERTICAL ACCURACY

~~See~~ See Item #32.

46 - COMPARISON WITH EXISTING MAPS

A comparison was made with the following U.S.G.S. Michigan quadrangles:
1:24,000 scale, 1975 revised edition - Oskar, Chassell, Laurium, Hancock,
Point Mills, Traverse Island, Muggun Creek; and Keweenaw Bay, 1:62,500 scale.

47 - COMPARISON WITH NAUTICAL CHARTS

A comparison was made with the following NOS Charts: Chart 14972,
20th edition, April 1976 and 21st edition, July 1979.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

KEWEENAW WATERWAY
FIELD EDIT REPORT
TP-00440 A

51. METHOD

A visual inspection was made of the shoreline by automobile and on foot. Some areas marked private property were not accessible.

Notes were made on the Master Field Edit Ozalid, photographs 78 YP 4454 and 4455, 78 YP 4458, 78 YP 4488, and thirty-four horizontal pictures taken by the field editor for clarification of the compilation.

52. ADEQUACY OF COMPILATION

The compilation was very good.

53. MAP ACCURACY

The horizontal placement of the compiled detail was very good. No statement about vertical accuracy.

54. RECOMMENDATIONS

Field experience by the office compiler would be a good aid in photo interpretation.

Photographs taken by the field editor are a good aid for the compiler for field edit application.

55. EXAMINATION

No statement.

Field Editor

Lowell O. Neterer, Jr.

May 26, 1981

REVIEW REPORT
SHORELINE
TP-00440A & TP-00440B

61. GENERAL STATEMENT

See Summary included with this report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS

Not applicable.

63. COMPARISON WITH MAPS OF OTHER AGENCIES

A comparison was made with U.S. Geological Survey Quadrangles: Muggun Creek, Hancock and Chassell, Michigan, dated 1946, Oskar, Point Mills, and Traverse Island, Michigan, dated 1954 (all six photorevised 1975, all 1:24,000 scale), Keweenaw Bay and Pelkie, Michigan, dated 1954, scale 1:62,500.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS

No contemporary hydrographic survey was conducted within the limits of this map.

65. COMPARISON WITH NAUTICAL CHARTS

A comparison was made with NOS Charts: 14972, 22nd edition, dated April 2, 1983, scale 1:30,000 with an inset of same area covered by this map, Hancock and Houghton, scale 1:10,000; and 14964, 16th edition, dated July 31, 1982, scale 1:120,000.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS

This map complies with the project instructions and meets the requirements for National Standards of Map Accuracy.

COMPILATION REPORT

TP-00440B

31 - DELINEATION

Delineation was done on the Wild B-8 stereoplotter using 1:20,000 scale panchromatic photography. Quality of the photography and coverage was good.

32 - CONTROL

Refer to the Photogrammetric Plot Report dated October 11, 1979.

33- SUPPLEMENTAL DATA

None.

34 - CONTOURS AND DRAINAGE

Contours are not applicable to the project. Drainage was delineated using the Wild B-8 stereoplotter and by office stereoscopic interpretation of the ratioed photos.

35 - SHORELINE AND ALONGSHORE DETAILS

Alongshore details were delineated on the Wild B-8 stereoplotter and by office interpretation of the ratioed photos.

36 - OFFSHORE DETAILS

Offshore details were compiled by office interpretation from the photographs.

37 - LANDMARKS AND AIDS

Appropriate copies of Form 76-40s are submitted with this Descriptive Report.

38 - CONTROL FOR FUTURE SURVEYS

None.

39 - JUNCTIONS

Refer to the Data Record Form 76-36B, item 5 of this Descriptive Report.

40 - HORIZONTAL AND VERTICAL ACCURACY

See Item #32.

TP-00440B

46 - COMPARISON WITH EXISTING MAPS

A comparison was made with U.S. Geological Survey Quadrangles: Hancock, Michigan, 1946, photorevised 1975, scale 1:24,000; and Chassel, Michigan, 1946, photorevised 1975, scale 1:24,000.

47 - COMPARISON WITH NAUTICAL CHARTS

A comparison was made with National Ocean Survey Chart: 14972, 21st edition, July 1979, scale 1:30,000; and inset, scale 1:10,000.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

Submitted by,

J. Byrd for

David Butler
Cartographic Technician
January 30, 1980

Approved for forwarding,

James L. Byrd, Jr.

James L. Byrd, Jr.

CM-7705
KEWEENAW WATERWAY
FIELD EDIT REPORT
TP-00440 B
~~INSET #1~~

51. METHOD

A visual inspection was made of the shoreline by automobile and on foot. Notes were made on the Master Field Edit Ozalid, photographs 77E(P) 694, 77E(P) 695, and 77E(P) 696. There were thirty-three horizontal pictures taken by the field editor for clarification of the compilation and one field sketch.

52. ADEQUACY OF COMPILATION

The compilation was very good.

53. MAP ACCURACY

The horizontal placement of the compiled detail was good. No statement about vertical accuracy.

54. RECOMMENDATIONS

Field experience by the office compiler would be a good aid in photo interpretation.

Photographs taken by the field editor are a good aid for the compiler for field edit application.

55. EXAMINATION OF PROOF COPY

No statement.

FIELD I. NEW POSITION DETERMINED OR VERIFIED Enter the applicable data by symbols as follows: F - Field L - Located V - Verified 1 - Triangulation 2 - Traverse 3 - Intersection 4 - Resection 5 - Field identified 6 - Theodolite 7 - Planetable 8 - Sextant A. Field positions* require entry of method of location and date of field work. EXAMPLE: F-2-6-L 8-12-75	III. POSITION VERIFIED VISUALLY ON PHOTOGRAPH Enter 'V-Vis.' and date. EXAMPLE: V-Vis. 8-12-75 **PHOTOGRAMMETRIC FIELD POSITIONS are dependent entirely, or in part, upon control established by photogrammetric methods.
*FIELD POSITIONS are determined by field observations based entirely upon ground survey methods.	

RESPONSIBLE PERSONNEL	
TYPE OF ACTION	NAME
OBJECTS INSPECTED FROM SEAWARD	☐ PHOTO FIELD PARTY ☐ HYDROGRAPHIC PARTY ☐ GEODETIC PARTY ☐ OTHER (Specify)
POSITIONS DETERMINED AND/OR VERIFIED	FIELD ACTIVITY REPRESENTATIVE
FORMS ORIGINATED BY QUALITY CONTROL AND REVIEW GROUP AND FINAL REVIEW ACTIVITIES	☐ REVIEWER ☐ QUALITY CONTROL AND REVIEW GROUP REPRESENTATIVE
INSTRUCTIONS FOR ENTRIES UNDER 'METHOD AND DATE OF LOCATION'	
OFFICE 1. OFFICE IDENTIFIED AND LOCATED OBJECTS Enter the number and date (including month, day, and year) of the photograph used to identify and locate the object. EXAMPLE: 75E(C)6042 8-12-75	FIELD (Cont'd) B. Photogrammetric field positions* require entry of method of location or verification, date of field work and number of the photograph used to locate or identify the object. EXAMPLE: P-8-V 8-12-75 74L(C)2982
FIELD 1. NEW POSITION DETERMINED OR VERIFIED Enter the applicable data by symbols as follows: F - Field L - Located V - Verified 1 - Triangulation 2 - Traverse 3 - Intersection 4 - Resection P - Photogrammetric Vis - Visually 5 - Field identified 6 - Theodolite 7 - Planetable 8 - Sextant A. Field positions* require entry of method of location and date of field work. EXAMPLE: F-2-6-L 8-12-75	11. TRIANGULATION STATION RECOVERED When a landmark or aid which is also a triangulation station is recovered, enter 'Triang. Rec.' with date of recovery. EXAMPLE: Triang. Rec. 8-12-75 111. POSITION VERIFIED VISUALLY ON PHOTOGRAPH Enter 'V-Vis.' and date. EXAMPLE: V-Vis. 8-12-75

*FIELD POSITIONS are determined by field observations based entirely upon ground survey methods.

**PHOTOGRAMMETRIC FIELD POSITIONS are dependent entirely, or in part, upon control established by photogrammetric methods.

RESPONSIBLE PERSONNEL	
TYPE OF ACTION	NAME
OBJECTS INSPECTED FROM SEAWARD	Lowell O. Neterer, Jr.
POSITIONS DETERMINED AND/OR VERIFIED	Lowell O. Neterer, Jr.
FORMS ORIGINATED BY QUALITY CONTROL AND REVIEW GROUP AND FINAL REVIEW ACTIVITIES	M. Mozgala
INSTRUCTIONS FOR ENTRIES UNDER METHOD AND DATE OF LOCATION. (Consult Photogrammetric Instructions No. 64.)	
OFFICE I. OFFICE IDENTIFIED AND LOCATED OBJECTS Enter the number and date (including month, day, and year) of the photograph used to identify and locate the object. EXAMPLE: 75E(C)6042 8-12-75	FIELD (Cont'd) B. Photogrammetric field positions** require entry of method of location or verification, date of field work and number of the photograph used to locate or identify the object. EXAMPLE: P-8-V 8-12-75 74L(C)2982
FIELD I. NEW POSITION DETERMINED OR VERIFIED Enter the applicable data by symbols as follows: F - Field L - Located V - Verified 1 - Triangulation 2 - Traverse 3 - Intersection 4 - Resection P - Photogrammetric Vis - Visually 5 - Field identified 6 - Theodolite 7 - Planetable 8 - Sextant A. Field positions* require entry of method of location and date of field work. EXAMPLE: F-2-6-L 8-12-75	II. TRIANGULATION STATION RECOVERED When a landmark or aid which is also a triangulation station is recovered, enter 'Triang. Rec.' with date of recovery. EXAMPLE: Triang. Rec. 8-12-75 III. POSITION VERIFIED VISUALLY ON PHOTOGRAPH Enter 'V-Vis.' and date. EXAMPLE: V-Vis. 8-12-75 **PHOTOGRAMMETRIC FIELD POSITIONS are dependent entirely, or in part, upon control established by photogrammetric methods.
*FIELD POSITIONS are determined by field observations based entirely upon ground survey methods.	

RECORD OF APPLICATION TO CHARTS

FILE WITH DESCRIPTIVE REPORT OF SURVEY NO.

INSTRUCTIONS

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

1. Letter all information.
2. In "Remarks" column cross out words that do not apply.
3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Rev

[illegible]
