ST MARYS ENTRANCE TO EDGEWATER AND ST JOHNS RIVER TO PALATKA GEORGIA-FLORIDA

SHORELINE MAPPING

SCALE 1:20,000

REVISED: 10-24-78 R.M. - TP-01003 LONGITUDE CHANGE

JOINS JOB PH-6716

SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT
TP-01004

Coastal Zone Map TP-01004 is one of eighteen 1:20,000 scale shoreline maps in project CM-7816. These maps are intended for planning purposes for the state of Florida and for the construction and maintenance of NOS Nautical Charts.

The layout for CM-7816 shows the location of the individual maps from St. Marys Entrance to Edgewater and from St. Johns River to Palatka. A copy of the layout is included in this Descriptive Report. Field operations consisted of a field inspection, premarking horizontal control and photographing the area, establishing tidal datums and performing the field edit.

Color compilation photography was taken with the Wild RC-10-Z camera at 1:20,000 scale in March, 1979 and used in clarifying detail and compiling landmarks and aids to navigation. The shoreline was compiled using 1:60,000 scale, black and white, infrared MHW photography taken with the Wild RC-10-C camera in March, 1979.

The Aerotriangulation Unit in Rockville, Maryland bridged five strips of 1:60,000 scale black and white photography using analytic aerotriangulation methods.

Compilation was completed in the Coastal Mapping Unit, Rockville, Maryland using instrument (Wild B-8) and graphic methods.

Field edit was completed in March, 1980. Recovery and location of landmarks, fixed aids to navigation, piling, etc. were omitted from the field edit procedures as per memo, dated January 30, 1978, from Chief, Coastal Mapping Branch. These items were compiled, to the extent possible, by office photogrammetric methods. The edit was required to only visually verify their existence at the time of edit. Their locations were not field checked. Field edit requirements in the foreshore and adjacent areas remain unchanged.

Application of field edit was performed in the Coastal Mapping Unit, Rockville, Maryland.

Final Review was performed in the Quality Control Unit, Rockville, Maryland in May, 1984. This map meets the requirements for National Standards of Map accuracy.

The context of this Descriptive Report contains all pertinent reports and listings of data used to compile the final map.

FIELD INSPECTION REPORT
SHEETS TP-01002 and TP-01004

2. ~~AERIAL~~ AREAL FIELD INSPECTION

This report is submitted for sheets TP 01002 and TP 01004. This area covers the St. Johns River from Orange Park to just south of West Tocoi, Florida. Photographs 79CP 8424, 79CP 8578, 79CP 8580 and 79CP 8581 were used for sheet TP 01002. The major part of the land along the river in this area is heavily populated. Photographs 79CP 8420, 79CP 8422 and 79CP 8578 were used for sheet TP 01004. The major part of the land along the river in this area is mostly wooded.

The photographs for these sheets consist of 1979 single lens ratio prints 1:20,000 scale. The photographs range from good to fair quality.

3. HORIZONTAL CONTROL

Not applicable. Job was pre-marked prior to photography.

4. VERTICAL CONTROL

Not applicable.

5. CONTOURS AND DRAINS

Contours not applicable. There are a number of perennial and intermittent streams within the area, which have been indicated on photographs.

6. WOODLAND COVER

Tree overhang was classified where it covers the shoreline.

7. SHORELINE AND ALONG SHORELINE FEATURES.

The shoreline inspection was accomplished from a skiff run close to shore. The areas consist of apparent, fast, bulkhead and riprap shoreline, all of which have been noted on photographs. Overhead cables, submerged cables and pipe lines have been noted on the photographs. Shoreline structures were also noted on the photographs.

8. OFFSHORE FEATURES

All offshore features have been noted on the photographs.

9. LANDMARKS AND AIDS

Not applicable.

10. BOUNDARIES, MONUMENT AND LINES

Not applicable.

11. OTHER CONTROL

Not applicable.

12. OTHER INTERIOR FEATURES

Major highways were noted on the photographs.

13. GEOGRAPHIC NAMES

Not applicable.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA

None.

Respectfully submitted,
6/8/79

James E. Dunford

Photogrammetric Plot Report

CM-7816

St. Marys Entrance to Edgewater and

St. Johns River to Palatka

Georgia - Florida
November 1, 1979

21. Area Covered

This report covers 18 1:20,000 sheets, TP-00996 thru TP-01013 of St. Marys Entrance to Edgewater and St. Johns River to Palatka, Georgia and Florida. Bridging and adjustment of strip 1 were completed and turned over to compilation June 29, 1979. Strips 2 and 3 were completed and turned over to compilation July 6, 1979.

22. Method

In trying to adjust strip 3 to strip 2 the common control and tie points indicated that there may be a problem in the photography. To obtain the best adjustment of strip 2 film distortion correction was not used. Strip 3 was also adjusted not using film distortion correction. A diviation of control and tie points of strip 3 from strip 2 was made not using film distortion correction. From this analysis it was determined that there is a good fit between the two strips.

Pt. No.	Film Distortion Correction		No Film Distortion Correction	
	X	Y	X	Y
498101	0.0	0.0	0.0	0.0
498801	-5.4	3.1	-0.9	5.8
498802	-0.1	0.5	-1.4	0.0
495801	5.1	5.1	-2.1	3.9
495802	7.1	8.3	0.9	5.5
508132	-8.8	0.4	-11.4	2.5
508199	-0.8	-5.6	3.4	-3.4
494100	0.0	0.0	0.0	0.0
491801	-8.3	5.9	-2.0	-2.6
491802	-7.4	1.4	1.2	-2.9
487801	-8.6	21.9	-3.8	2.7
518100	0.0	0.0	0.0	0.0

Strip 4 was adjusted horizontally on a third degree curve using film destortion correction and was evaluated as a good adjustment.

Strip 5 was adjusted with and without the use of film destortion correction, but would not fit strip 4. To accomplish a sufficient tie of strip 5 to strip 4, a 25 photo block adjustment had to be used.

Visible landmarks and fixed aids to navigation were located during bridging of the 1:60,000 scale photography. Ratio values were determined of the 1:60,000 scale MLW and MLH infrared photography and was provided along with other data to compilation.

23. Adequacy of Control

All control was adequate and held within the accuracy required by National Standards of Maps for 1:20,000 scale manuscripts.

24. Supplemental Data

Local shoreline and U.S. Geological Survey quadrangles were used to provide elevations for vertical adjustments of bridges.

25. Photography

RC-10 black and white positives were adquate as to coverage and overlay. Definition was poor as in some areas double images of piers could be seen.

Compilation Report
TP-01004
February 1980

31. Delineation

Most alongshore cultural features and interior planimetry on this map were delineated by graphic compilation using rectified black-and-white prints of the 1:60,000 scale panchromatic photography. This photography was controlled by map points determined by aerotriangulation.

The interior planimetry and alongshore cultural features, on both sides of the St. Johns river from Green Cool Springs to just below Smith Point was compiled from a model set on the B-8 stereoplotter using the 1:60,000 scale panchromatic photography.

The MHW line was compiled from tide-coordinated, black-and-white infrared photography. Field inspected panchromatic photography was used in the compilation of this map.

32. Horizontal Control

Horizontal control was adequate (See Photogrammetric Plot Report).

33. Supplemental Data

Two tide stations were plotted from sketches furnished by the Tides and Water Level Section.

34. Contours and Drainage

Contours are not applicable. Drainage was compiled from office interpretation of tide-coordinated, black and white infrared photography.

35. Shoreline and Alongshore Detail

Office interpretation of the tide-coordinated, black and white infrared photography was adequate for delineating the shoreline and alongshore detail.

36. Offshore Delineation

No offshore detail was delineated on this map.

37. Landmarks and Aids

There were 5 landmarks and 5 fixed aids located during bridging and compilation of this map. Four of the aids that have triangulation positions were referred to the field editor as positions differ.

38. Control for Future Surveys - None

39. Junctions

Refer to NOAA Form 76-40B.

40. Horizontal and Vertical Accuracy

This map complies with the accuracy requirements for the Florida Coastal Zone Mapping Program as outlined by Project Instruction PH-7000.

41. thru 45. Inapplicable

46. Comparison with Existing Maps

Comparison was made with the following USGS quadrangle maps:

Green Cove Springs, Fla., 1949, Photo revised 1970, Scale 1:24,000
Pecolata, Fla., 1949, Photo revised 1970, Scale 1:24,000
Riverdale, Fla., 1949, Photo revised 1970, Scale 1:24,000
Bostwick, Fla., 1949, Photo revised 1970, Scale 1:24,000

47. Comparison with Nautical Charts

Comparison was made with the following Nautical Chart:

11492,11th Edition, Oct. 29, 1977

Items to be applied to Nautical Charts immediately: None

Items to be carried forward: None

FIELD EDIT REPORT

TP 01004 CM 7816

METHOD

The field edit was made according to the Coastal Mapping Instructions dated 1-30-78. The manscript was inspected and all questions answered. The field edit was made by driving to some areas in question and from a skiff run close to shore. One discrepancy print and four photographs, numbers 79 CP 8420, 8421, 8422 and8578 were used.

ACCURACY OF COMPILATION

Adequate after application of field edit information.

1-TRIANGULATION	5-FIELD IDENTIFIED
2-TRAVERSE	6-THEODOLITE
3-INTERSECTION	7-PLANETABLE
4-RESECTION	8-SEXTANT

   A. FIELD POSITIONS* SHOW THE METHOD OF LOCATION AND DATE OF FIELD WORK.
   EXAMPLE F-2-6-L
   8-12-76

*FIELD POSITIONS ARE DETERMINED BY FIELD OBSERVATIONS BASED ENTIRELY UPON GROUND SURVEY METHODS

FIELD (CONT'D)

   B. PHOTOGRAMMETRIC FIELD POSITIONS** SHOW THE METHOD OF LOCATION OR VERIFICATION, DATE OF FIELD WORK AND NUMBER OF PHOTOGRAPH USED TO LOCATE AND IDENTIFY THE OBJECT.
   EXAMPLE P-8-V
   8-12-77
   74L(C)2982

2. TRIANGULATION STATION RECOVERED
   WHEN A LANDMARK OR AID WHICH IS ALSO A TRIANGULATION STATION IS RECOVERED, A TRIANG. REC. WITH DATE OF RECOVERY IS SHOWN.
   EXAMPLE TRIANG. REC.
   8-12-76

3. POSITION VERIFIED VISUALLY ON PHOTOGRAPH SHOWN BY V-VIS AND DATE.
   EXAMPLE V-VIS
   8-12-75

**PHOTOGRAMMETRIC FIELD POSITIONS ARE DEPENDENT ENTIRELY, OR IN PART, UPON CONTROL ESTABLISHED BY PHOTOGRAMMETRIC METHODS.

NOTE: WHERE THE NAME OF AN AID INCLUDES THE IMMEDIATE GEOGRAPHIC HEADING UNDER WHICH IT IS LISTED, A DASH (-) IS USED TO INDICATE THE GEOGRAPHIC HEADING WHICH IS PART OF THE OFFICIAL NAME.

RECORD OF APPLICATION TO CHARTS

FILE WITH DESCRIPTIVE REPORT OF SURVEY NO. _____

INSTRUCTIONS

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.
1. Letter all information.
2. In "Remarks" column cross out words that do not apply.
3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
