FIELD INSPECTION REPORT

Map Manuscript T-10352

Project Ph-155

Refer to Field Inspection Report for Project Ph-155, "Mouth of Columbia River to Altoona", July 1957 to November 1957.
PHOTOGRAMMETRIC PLOT REPORT

Map Manuscript T-10352

Project Ph-155

A Stereoplanigraph Bridge was not run for the area of this manuscript.

In order to extend the horizontal control a special radial plot was run using nine lens photographs which were taken on October 25, 1951. These photographs spanned the mouth of the Columbia River and identified horizontal control stations on both shores were utilized. Two U. S. Engineers stations located on the south jetty were used to supplement the C&GS control. Hand templates were used and a very satisfactory radial plot was accomplished.

Approved:        Respectfully submitted:

Fred Natella, CAPT, C&GS        J. Edward Deal

COMPUTED BY: J.E.D. DATE: 10-10-57 CHECKED BY: D.N.W. DATE: 10-16-57
COMPILATION REPORT
Map Manuscript T-10352
Project Ph-155

31. Delineation:

Pass points common to both the nine lens photography taken in 1951 and the single lens photography of 1955 were located by the radigr line method using the nine lens photographs. Compilation was accomplished from data furnished by the field unit on 1955 photography. Both sets of photographs were utilized when compiling details.

Refer to Item 35, Shoreline and Alongshore Details for description of compilation methods for the "South Jetty".

32. Control:

Horizontal control was adequate.

33. Supplemental Data:

34. Contours and Drainage:

Contours are not applicable.

The only drainage within the land area of this manuscript is a small marsh area which was field inspected.

35. Shoreline and Alongshore Details:

The mean high water line around South Jetty was compiled from a topographic survey of this feature by the U. S. Engineers, who compiled it at a scale of 1 inch equals 200 feet from aerial photographs dated 12 June 1956. The datum of this survey was mean lower low water and the contour interval two feet. The 7.6 foot contour (mean high water) was interpolated and transferred to the 1:10,000 scale manuscript by means of a vertical projector, using the following points as control:
U.S.E. Picture Point at "S" Curve on Jetty 1957
TRESTLE (USE) 1956
U.S.E. Picture Point on Jetty 1957

Other features were adequately field inspected and no trouble was encountered during the compilation work.

The low-water line could not be determined from the photographs and was not mapped.

36. **Offshore Features:**

Two submerged wrecks shown on Nautical Chart No. 6151 in the Columbia River northwest of Clatsop Spit were not observed during field inspection and were not visible on the photographs.

37. **Landmarks and Aids:**

Form 567 is submitted for one landmark. There are no fixed aids to navigation within the area of this manuscript.

38. **Control for Future Surveys:**

Two objects are shown as recoverable topographic stations. These are:

U.S.E. Picture Point at "S" Curve on Jetty 1957
U.S.E. Picture Point on Jetty 1957

39. **Junctions:**

Satisfactory junctions were made with T-10345 on the north and T-10353 on the east. The Pacific Ocean is to the west and south.

40. **Horizontal and Vertical Accuracy:**

Vertical accuracy is not applicable.

There are no areas that are believed to be of sub-normal horizontal accuracy.

46. **Comparison with Existing Maps:**

Comparison was made with U.S.G.S. 7½ minute quadrangle, Clatsop Spit, Oregon, Scale 1:24,000, published in 1951.
47. Comparison with Nautical Charts:

Items to be applied to nautical charts immediately.

None.

Items to be carried forward.

None.

Approved: [Signature]
Fred Natella, CAPT, C&GS
Portland District Officer

Respectfully submitted: [Signature]
Charles H. Bishop
Surveying Technician
49. Notes to the Hydrographer:

No recoverable topographic stations were located in the area of this map manuscript.

There are two picture points (U.S.E.) shown on the south jetty which were located by observations and Oreg. North Zone State coordinates were computed. These held satisfactorily along with C&GS horizontal control in a control extension over a large area which utilized 1951 nine lens and 1955 single lens photography. These two points are indicated on Field Photograph 55 W 8640. It may be possible to use these two points for hydrographic control.

The mean high-water line for the jetty was transferred to the map manuscript from a Balplex topographic compilation, Scale 1"=200', and contour interval 2 feet made in 1957 by the Portland District U. S. Engineers Office. The U. S. Engineer picture point at the "S" curve of the jetty was not held in this compilation but the compilation was satisfactorily adjusted to the compilation for T-10352.

When locating additional photo-hydro control 9-lens photographs No's. 34349 and 34350 should be used along with all available single lens photographs.
PHOTOGRAMMETRIC OFFICE REVIEW

The manuscripts covered by this review report supersede the surveys listed above for purposes of nautical chart construction.

Comparison with Maps of Other Agencies

Comparison was made with the latest existing maps during the photogrammetric review. Each report lists under "Comparison with Maps, etc." the quadrangles that were used.

Comparison with Contemporary Hydrographic Surveys

Where applicable, each map was compared with the latest hydrographic survey. All available hydrographic surveys are unverified. Discrepancies are listed under the heading of each map. If the map is not listed, no discrepancies exist during review.

T-10352 - The submerged rocks shown on the manuscript which appear to once have been part of the jetty were compiled in the photogrammetric office from a U.S. Engineer Survey dated 1956. This feature was not developed by hydro on sheets H-8421 through H-8423. See the Descriptive Report for this survey for details.

T-10354 - A pile is shown on the manuscript above MHW whereas hydro shows this pile submerged at latitude 46°14'37" and longitude 123°55'16". The pile was field inspected.

T-10356 - A rock is shown on the manuscript as awash MHW and on hydro sheet H-8420 as (2) with a position difference of approximately 5 meters. The rock is located at latitude 46°12'45" and longitude 123°45'18". The height of the rock was given by the field inspector.
T-10357 - Piles and/or shags shown on Chart 6151 in the vicinity of latitude 46°13'30" and longitude 123°42'30" and latitude 46°12'30" and longitude 123°42'30" are not shown on the unverified smooth sheet. They are too far offshore for photogrammetric location.

65. Comparison with Nautical Charts

Comparison was made with Charts 6151 and 6152, 34 Edition October 10, 1960 corrected June 26, 1961. Nautical Charts did not use these surveys for the construction of the new edition. Many minor changes in offshore features and planimetric detail were noted. Only dangers to navigation or significant changes in detail have been noted for each sheet.

T-10354 - Some differences were noted in: shoreline features in the vicinity of Hammond at latitude 46°11'30", longitude 123°56'00". The pile area in the vicinity of latitude 46° 12'30", longitude 123°52'30" is incomplete. It is a shoal area and of no danger to navigation.

T-10361 - A difference exists in the position of a shag at latitude 46°11'03" and longitude 123°51'46" in Youngs Bay. Landmark "Drum" should be deleted from Chart as recommended on Form 567.

66. Adequacy of Results and Future Surveys

These maps comply with instructions and meet National Standards of Map Accuracy.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
