SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT T-10758

Planimetric survey T-10758 is one of seventy-four similar surveys in Project PH-5704. It covers a part of the western shore of Mobile Bay in the vicinity of Alabama Port. The location of the map in the project is shown on page 5 of this report.

Field work preceding compilation consisted of recovery and identification of horizontal control, shoreline and field inspection, Geographic Names investigation and Report on Boundaries.

Compilation was by graphic methods using the 1:10,000 9-lens photography of November 1957. Cronaflex copies of the manuscript along with specially prepared photographs and ozalid prints were subsequently provided for preparation of the hydrographers boat sheet, photo-hydro support and field edit use.

The manuscript is a vinylite sheet 3 minutes 45 seconds in latitude by 3 minutes 45 seconds in longitude which was scribed and reproduced on cronaflex. One cronar positive and one cronar negative are provided for record and registry.
2. AREAL FIELD INSPECTION  These maps are located in southwestern Alabama along the northern side of Mississippi Sound and the west side of Mobile Bay. The land area is the mainland along the sound and several offshore islands. The area is sparsely settled except for several small villages, Bayou La Batre, Coden and Heron Bay. Bayou La Batre is the only incorporated village in the area. The principal industries are shrimp fishing and oyster farming. The shrimp and oyster fleets base out of Bayou La Batre and Coden. The area is accessible by shallow draft boats and an adequate network of hard-surfaced highways.

The offshore islands are uninhabited and are entirely marsh except for sand or shell fringes along the edges.

Field inspection is believed complete and no items were deliberately left for field edit.

Photography was of fairly recent date and of good quality. The usual tone changes were evident on the photographs, white in sand or shell areas, grey in marsh and open, uncultivated areas and black in the wooded areas. Attention is called to the areas of grass in water and marsh. The difference in tone is indefinite and considerable time was spent walking along the shore in order to indicate the apparent shoreline on the photographs. It is believed the correct line has been indicated. The black tones, in the marsh areas, are covered by much higher grass than the grey tones. The grass along the edges of the marsh also appear to have increased in density since photography. Field inspection notes appear on the following nine-lens photographs, 56586 through 56591, 56662 through 56666, 56668, 56677 through 56680, 56751 through 56755, 56788, 56790, 56792, 56793 and 56860 through 56862.

3. HORIZONTAL CONTROL  All Coast and Geodetic Survey control was searched for and where recovered was identified to control the plot.

A small scheme of third-order triangulation was observed. The following stations were established, MARSH, MURDER 2, Miss. Sound, Bayou Coden Channel Leading Light, Miss. Sound, Bayou La Batre Light 2, Miss. Sound, Bayou La Batre Light 6, Miss. Sound, Bayou La Batre Range Front Light, Miss. Sound, Bayou La Batre Range Rear Light and Mobile Marine Radio Antenna WLO.
The following third-order traverse stations established by the Alabama Geodetic Survey were recovered and identified, 304-2, 304-9, 304-10, 318-3, 318-6, 318-13, 325-4, 328-2, 334-1 and 334-2.

The following stations were reported lost, CAT 2 1935, MURDER 1910, NEGRO 1910, Hotel Center Cable 1910, IN 1910, East End First Shack 1910, East End Second Shack 1910, East End Third Shack 1910, Port Chimney 1910, LIT 1910, LIGHT 1910, TREE 1910, Y TREE 1910, BAR 1910, JULES HOUSE SOUTHEAST CABLE 1910, HERON 1910, RAN 1910, EAST CHIMNEY (THREE DECKER) 1910, Bayou La Batre Beacon No. 2 1935, Bayou La Batre Beacon No. 4 1935, 205-5 1940, 301-1 1940, 301-2 1940, 304-1 1940, 304-2 1940, 304-4 1940, 315-2 1940, 318-4 1940, 318-7 1940, 318-8 1940, 318-9 1940, 318-10 1940, 318-12 1940, 328-1 1940, 328-3 1940, 328-4 1940, 328-5 1940, 329-3 1940, 329-4 1940 and 334-1 1940.

The following stations were reported lost but were identified, CAT 1935 and JULIET 1910. Reference marks were identified in lieu of the stations. The monuments at stations 304-2 and 334-1 were broken off but were identified. The disk had been removed from 329-2 but the station was identified.

4. Vertical Control Two tidal bench marks were recovered and identified. The marks are Alabama Port, Mobile Bay Bench Mark 1 or X 11 (1918) and Bayou La Batre Tidal EM Z 10 (1918). No other control was searched for.

5. Contours and Drainage Contours are inapplicable. The short streams inland from the shore are self-evident from the photographs.

6. Woodland Cover Adequately covered by the photographs.

7. Shoreline and Alongshore Features The mean high water line and apparent shoreline was inspected by skiff and walking along the shore. Several different tones were noted as marsh. Some of the difference is due to different heights and density of the grass. The only difficulty was in determining the line between marsh and grass in water. These areas were carefully inspected and correctly indicated on the photographs.

The approximate low water line was indicated around two bars on photographs 56664 and 56677.

There are no bluffs or cliffs.

* See 1959 Form 526 "JULIET" Destroyed

See Photogrammetric Plot Report.
All docks, wharves and piers have been indicated on the photographs.

Shoreline inspection notes have been indicated on the following photographs, 56662 through 56664, 56677 through 56679, 56752, 56754, 56755, 56793, 56860, 56861 and 56862.

8. **Offshore Features** There are none.

9. **Landmarks and Aids** There are no landmarks for nautical charts in this area.

There are no aeronautical aids in the area.

Fixed aids to navigation were located by three methods, triangulation or direct photograph identification. The daybeacons along Bayou La Batre were visible on one photograph. An angle and distance from a photo point, were observed as a check on their location. The daybeacons along Bayou Coden were located by angle and distance from identifiable photo points.

10. **Boundaries, Monuments and Lines** The only boundaries affecting these maps are the corporate limits of Bayou La Batre. These will be submitted at a later date.

11. **Other Interior Features** All roads have been classified on the field inspection photographs.

Buildings were field inspected and have been indicated on the photographs.

Measurement of bridges and cables was not required by the project instructions.

There are no airports or landing fields.

12. **Other Control** The recovered and established horizontal control filled the requirements for spacing stations.

13. **Geographic Names** See Special Report Geographic Names Project Ph-5704. The report will be submitted at a later date.

14. **Special Reports and Supplemental Data**

Special Report Geographic Names, Project Ph-5704. The report will be submitted at a later date.
Special Report, Boundaries, Project Ph-5704. The report will be submitted at a later date.

PHOTOMGRAMMETRIC PLOT REPORT

21. AREA COVERED

Photogrammetric Plot No. 1 of Ph-57Ch was for the entrance to Mobile Bay and all of Dauphin Island (manuscripts T-10757, T-10758, T-10761, T-10762, T-10770 through T-10772), and also eastward along a narrow peninsula between Bon Secour Bay and the Gulf of Mexico (manuscripts T-10773 through T-10776).

The sketch on page 14 of this report shows the arrangement of manuscripts, the identified control, index of control, photograph centers and the adjoining manuscripts.

22. METHOD

Radial Plot:

Map manuscripts: -- The projections are 3°15' in latitude and longitude with the exceptions of T-10774 through T-10776 which are 1°15' in latitude. The western limit of T-10770 was extended to 80°19'. See letter (copy attached) to Chief, Photogrammetry Division, dated 17 September 1959. The northern limit of T-10771 was extended to 30°15'30" to accommodate detail in this area.

The plot was run on the joined manuscripts.

Photographs; -- The nine-lens photographs of 19 November 1957 at a scale of 1:10,000 were used to run the plot.

Contact single-lens infra red photographs were taken simultaneously with the nine-lens photographs with Camera "L" being used.

Only these single-lens photographs were located where it was believed they would aid the compiler in locating the photogrametric stations. They were fixed in position by holding pass points located by the nine-lens photographs.

Templets: -- Vinylite templets were made from nine-lens photographs using master templet 53605 (1956-1957) for correction of transforming errors and paper distortion.

Closure and adjustment to control: -- The plot was run from east to west with conventional methods being used. Two Alabama Geodetic Survey control stations could not be held in the plot. See letter (copy attached) to Chief, Photogrammetry Division, dated 8 September 1959.
23. ADEQUACY OF CONTROL

The control was adequate and all of it was positively identified. In the northern part of T-10758, it could not be determined which of two stations was in error, and NON LOUIS RM 2 1930 and JULIET R.M.A. 1910 were returned to the field for verification. It was found that JULIET R.M."A" actually had been destroyed at the time of the original identification and should not have been identified. (See 1959 recovery). A new substitute station was located for NON LOUIS and was held in the plot.

24. SUPPLEMENTAL DATA

None.

25. PHOTOGRAPHY

The nine-lens photographs gave adequate coverage, however the quality of the photographs was poor. Most of the photographs have a muddy appearance and on 56758 three fiducial marks were missing in the wing chambers. See attached letter dated 1 September 1959, Subject "Washboard Affect of nine-lens photographs".

None of the photographs were sufficiently tilted to justify special measures.

26. GENERAL

Dates of completion of the photogrammetric plot by maps are as follows:

APPROVED & FORWARDED

William R. Koch

Arthur L. Wardwell
Tampa District Officer
COMPILATION REPORT T-10758

PHOTOGRAHMETRIC PLOT REPORT

Submitted with T-10757

31. DELINEATION

Compiled graphically.

The photographs, though tilted, were of reasonably good scale. Photograph 56860 had the best scale for the particular area embracing this map manuscript.

Field inspection was adequate.

32. CONTROL

See photogrammetric plot report.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

Contours are inapplicable.

Drainage has been delineated as shown photographically.

35. SHORELINE AND ALONGSHORE DETAILS

The entire shoreline is fast being bordered with sand or trees. All alongshore structures noted by the field inspector have been delineated accordingly.

No low-water or shoal lines have been shown.

36. OFFSHORE DETAILS

None.
37. **LANDMARKS AND AIDS**

   None.

38. **CONTROL FOR FUTURE SURVEYS**

   One topographic station is being submitted on form 524 and is listed under item 49.

39. **JUNCTIONS**

   A satisfactory junction has been made with T-10757 on the west and T-10743 on the north. There is no survey on the south or west.

40. **HORIZONTAL AND VERTICAL ACCURACY**

   No statement.

46. **COMPARISON WITH EXISTING MAPS**

   A comparison has been made with U. S. G. S. topographic quadrangle CEDAR POINT ALABAMA, edition of 1943, scale 1:62,500, surveyed in 1940-41; and U. S. G. & G. S. planimetric map T-5533, scale 1:20,000, compiled from air photographs taken July 16, 1934. No outstanding discrepancies were noted in the shoreline. Inshore, some new second-class roads are shown in the vicinity of Point Judith.

47. **COMPARISON WITH NAUTICAL CHARTS**

   A comparison was made with nautical chart 1266, scale 1:80,000, 15th edition, published 16 November 1959. Except for additional alongshore structures in the vicinity of Point Judith, no outstanding differences were noted.
ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

41. Remarks (see attached sheet)

FIELD COMPLETION ADDITIONS AND CORRECTIONS TO THE MANUSCRIPT
42. Additions and corrections furnished by the field completion survey have been applied to the manuscript. The manuscript is now complete except as noted under item 43.

43. Remarks:
Field Edit Report
(Shoreline)
Quadrangles T-10942, T-10943, T-10757, T-10758
Project FH-5704

51. Methods.

The distance to the MEZL was spot checked along the shoreline. Additions and corrections to the manuscript have been noted on the field-edit sheet in red.

Field-edit information has been shown on field-edit sheets for T-10942, T-10943, T-10757, and T-10758.

52. Accuracy of compilation.

Map compilation appears complete and adequate.

53. Main accuracy.

The shoreline of the maps is accurate except for the minor changes since photography as shown on the field-edit sheet.

54. Recommendations.

There are no recommendations.

55. Examination of proof copy.

The following person is able to read a map of this area with assurance and has agreed to examine a proof copy of the map for possible errors: Byrd L. Moore, 36 N. Section Street, Fairhope, Alabama.

Submitted:

Michael L. Olivier
Photo Hydro Support Unit 720
61. GENERAL STATEMENT:

See Summary accompanying the Descriptive Report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

Comparison was made with Registered Survey T-5533, 1:20,000 scale, compiled from photography of July 1964. The comparison was good, the minor changes along the shoreline have been noted on the Comparison Print in blue.

63. COMPARISON WITH MAFS OF OTHER AGENCIES:

Comparison was made with U.S.G.S. LITTLE DAUPHIN ISLAND, ALA., 1:24,000 scale, 7½ minute quadrangle, edition of 1958. Except for minor changes in the shoreline along the west side of Mobile Bay the two surveys are in good agreement.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

Comparison was made with a copy of smooth sheet H-8560, BCFP-10-1-60 and H-8561, BCFP-10-5-60.

The following detail do not appear on the smooth sheet H-8560.

<table>
<thead>

<td>30 21 59</td>
<td>88 06 29</td>
</tr>
</tbody>
</table>

The above have been noted on the Comparison Print in purple.

65. COMPARISON WITH NAUTICAL CHARTS:

Comparison was made with Nautical Chart 872-SC, 2nd edition, corrected thru NM 38-Sept. 17, 1966 and Chart 1266, 20th edition, April 17, 1967. The difference in the shoreline of Chart 872-SC and the manuscript has been shown on the Comparison Print in red. A boat shed in ruins at latitude 30° 22' 25", longitude 88° 06' 24" is shown on Chart 1266 as a pile.
66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

This survey complies with instructions and meets the National Standards of Map Accuracy.
