SUMMARY
TO ACCOMPANY SHORELINE MAP MANUSCRIPTS
T-10037 through T-10046

The ten (10) subject map manuscripts represent
the westemmost shoreline surveys of Project PI-5897.
The project covers the Columbia River and adjacent land
areas of Oregon and Washington from Bonneville Dam east-
ward to the vicinity of McSary Dam. It was designed to
aid in the revision of existing nautical charts and in
the construction of new ones from the Dalles upstream
to Nantilla. T-10037 through T-10046 extend from Bonne-
ville eastward to Reservoir Lake.

A stereoplaniograph bridging plot of subject surveys
was done in the Washington Office in February 1959 (see
pages 13 through 16 of Descriptive Report T-10037). The
map manuscripts were compiled by stereoscopic instrument
(Kelsh Flottor) in the Portland Photogrammetric Office
from March to July 1959 from photography of August 1958
(plus U.S. Engineers' photography of July 1957 and Bonne-
ville Power Administration photography of July 1952) and
results of field inspection of February to April 1959.

The completed compilations as submitted to the Wash-
ington Office are the result of adequately surveyed sheets
and suitable for the direct reproduction of registration
copies.

A coroner film positive at the compilation scale of
1:10,000 and the Descriptive Report of each will be reg-
istered and filed in the Bureau Archives.

August 1961
2. Areal Field Inspection:

This area is the Columbia River Gorge. Both sides of the Columbia River are bounded by steep wooded terrain with precipitous cliffs. Lumbering and farming are the chief industries. Tugboat and barge traffic ply the waters of the Columbia River. The north side of the river is served by the Spokane, Portland and Seattle railway and by U.S. Highway 830. The south side of the river is served by the Union Pacific Railroad and by U.S. Highway 30. There are no incorporated communities in the area. There are several railroad and highway tunnels along the north shore of the Columbia River. There is a railroad bridge and a highway bridge over the mouth of the Little White Salmon River.

3. Horizontal Control:

a. No supplemental control was established.

b. No datum adjustment was made by the field party.

c. Stations of other agencies were not recovered.

d. All stations required by the project instructions were identified.

e. The following Coast and Geodetic Survey stations were not searched for:

   Portland - Spokane Airway, 55-Mile Red Blinks, 1939

   This station was reported as destroyed at a previous date.

The following stations have been reported as LOST on Form 526:
Sheet 10842
Cooks Light, 1939
Cooks, Railroad Station, East Cable, 1939
Perham Creek Light, 1939
Viento, Large Barn, East Cable, 1939
Portland - Spokane Airway Beacon, 55-Mile Red Blinker, 1939

If one or both reference marks were recovered and the station mark was not, the station was considered as recovered and not lost.

4. **Vertical Control:**
Vertical Control not applicable.

5. **Drainage and Contours:**
Contours not applicable.

The drainage has been indicated on the field photographs where this feature is discernible, usually near the mouths of the streams as the upper reaches of the drainage pattern are obscured by woodland cover.

6. **Woodland Cover:**
Representative areas of the woodland cover have been indicated on the field photographs.

7. **Shoreline and Alongshore Features:**

a. The shoreline as indicated on the field photographs is the normal pool level of the Columbia River as controlled by the Corps of Engineers at the face of Bonneville Dam. The elevation of the water surface of the river at the time of photography was about 1.5 feet above the established normal pool level. This difference in surface elevations is not great enough to cause an appreciable horizontal displacement of the shoreline. The image of the shoreline as it appears on the field photographs can be considered the mapping feature. The character of the shore has been indicated on the field photographs.

b. **Low Water Line:**
Not applicable.

c. **The Foreshore:**
Not applicable.
d. **Bluffs and Cliffs:**

Bluffs and cliffs were noted on the field photographs, estimated heights were indicated on the photography.

e. **Docks, Wharves, Piers, Landings etc:**

There are no docks, piers or wharves in this area. In Drano Lake there are numerous dolphins and piles used to secure log rafts.

f. **Submarine Cables:**

There are no submarine cable crossings in the area.

g. **Other Shoreline Features:**

At Cook, Washington, there is a small lumber mill. At the north end of Drano Lake there is a fish hatchery. The log dump at Drano Lake has been indicated on the field photographs.

8. **Offshore Features:**

Rocks, dolphins, piles, tree stumps and snags have been indicated on the field photographs.

9. **Landmarks and Aids:**

a. There are no landmarks for charts in Sheets 10842 and 10843.

b. There are no interior landmarks within the area of this report.

c. There are no aeronautical aids within the area of this report.

d. The following fixed aids to navigation were located and identified on the field photographs:

<table>
<thead>
<tr>
<th>Aid</th>
<th>How Located</th>
<th>Ident. on Photo</th>
</tr>
</thead>
<tbody>
<tr>
<td>Viento Light 18</td>

<td>Photo Plot</td>
<td>58 S 7875A</td>
</tr>
<tr>
<td>Mitchell Point Range Front Light</td>
<td>Triangulation</td>
<td>58 S 7875A</td>
</tr>
</tbody>
</table>

e. There are no floating aids to navigation within the area covered by this report.
10. **Boundaries, Monuments and Lines:**

No boundaries, monuments or lines were located during the field work. The state line between Washington and Oregon is the Columbia River.

11. **Other Control:**

No other control was established within the area covered by this report.

12. **Other Interior Features:**

Roads have been classified in accordance with Photogrammetry Instruction 56 dated 1 July 1958.

Buildings have been classified on field photographs in accordance with Photogrammetry Instruction 54 dated 2 January 1958.

There is a power transmission line supported on skeleton steel towers along the north slope of the gorge of the Columbia River.

There is a wooden flume that transports rough lumber from a sawmill at Willard, Washington to a lumber mill at Hood Siding, Washington along the face of the bluffs and cliffs on the east side of the Little White Salmon River and then northward along the south slope of the gorge bluffs of the Columbia River.

13. **Geographic Names Investigation:**

Geographic names are the subject of a special report. See 14. a.

14. **Special Reports and Supplemental Data:**

a. Geographic names within the area covered by this report are contained in a special report "Geographic Names Report, Part 1, Columbia River, Bonneville to The Dalles".

COMPUTED BY: J.E.D. DATE: 12-4-58 CHECKED BY: J.L.H. DATE: 12-5-58
31. **Delineation:**

The Kelsh Stereoscopic Instrument was used to compile the planimetry. The C&GS photography of 8-30-58 was adequate to compile planimetric details to the limits indicated on the project index.

Refer to the last paragraph under this heading in the descriptive report for T-10837.

32. **Control:**

Refer to the Photogrammetric Plot Report (Stereoplanigraph Bridge) T-10837 thru T-10845 and to an appendix to this report submitted by the Portland Photogrammetric Office. These are included as part of the descriptive report for T-10837 (1959) pages 13 thru 17.

33. **Supplemental Data:**

Oregon State Parks were delineated from a plan furnished by the Oregon State Highway Commission showing state owned land along U. S. Highway 30. This plan is inadequate for accurate delineation and the boundary lines shown on the manuscripts merely represent the areas.

34 to 37:

Facts relative to the subjects of Items 34 thru 37 are identical with those described under these paragraphs in the descriptive report for T-10837.

38. **Control for Future Surveys:**

There are sufficient triangulation stations situated along the shorelines of the Columbia River for use in future surveys. Viento Light 18 was located by triangulation methods.

39. **Junctions:**

Satisfactory junctions were made on the east with T-10843 and on the west with T-10841. There are no contemporary surveys to the north and south.
40 - 46 and 47:

Facts relative to the subjects of Items 40 - 46 and 47 are identical with those described under these paragraphs in the descriptive report for T-10837 (1959).

41. Remarks (see attached sheet)

FIELD COMPLETION ADDITIONS AND CORRECTIONS TO THE MANUSCRIPT

42. Additions and corrections furnished by the field completion survey have been applied to the manuscript. The manuscript is now complete except as noted under item 43.

43. Remarks:
62. Comparison with Registered Topographic Surveys

A small portion of T-3607 (1948) of adjoining project PH-17 overlaps into T-10338. There are some discrepancies in this common area, however, the different datums could account for most of these. T-10338 supersedes T-3607 for the common area for nautical charting purposes. No other previously registered topographic surveys exist of subject coverage.

63. Comparison with Maps of Other Agencies

Subject surveys at scale of 1:10,000 do not readily permit a detailed comparison with above-listed quadrangles at 1:62,500. However, shoreline differences exist throughout.

64. Comparison with Contemporary Hydrographic Surveys

There are no contemporary hydrographic surveys of subject area.

65. Comparison with Nautical Charts

6157 1:40,000 Revised to March 1961

There are considerable disagreements between these surveys. An evaluation of these by the Nautical Chart Division for possible early consideration is recommended. Typical major discrepancies are at the following locations:

1. Lat. 45° 41', Long. 121° 51' - in the vicinity of Government Cove
2. Lat. 45° 41', 45°, Long. 121° 41' - see long point of land and islands S thereof
3. At the Oregon shore of Columbia River directly west of Hood River - White Salmon Bridge (lat. 45° 43' - long. 121° 30' to 31').
