NOAA FORM 76-36D
This summary covers Project PH-6909 consisting of nineteen standard shoreline maps covering the area of Sumner Strait. The purpose of this job was to provide support for hydrographic operations conducted in the area during the 1971 and 1972 field seasons. Each map is 1:10,000 scale.

Photography of the area was flown during the summer of 1969. Flights of 1:60,000 and 1:30,000 scale color photography were flown for use in aerotriangulation and stereo instrument compilation. Tandem flights of 1:20,000 scale color and black and white infrared were used to supplement the instrument compilation photography.

There was no field inspection. Prior to compilation field work consisted of the recovery and identification of horizontal control for bridging which was conducted at the Rockville Office in April, 1970, by analytic methods.

All maps were compiled at the Atlantic Marine Center with the Wild B-8 stereoplotter. Shingle Island on T-13341 and Vichnefski Rock and White Rock on T-12464 were compiled graphically using control established in the bridge supplemented by control established in B-8 stereo models.

Field Edit was done for all maps in summer of 1971. Much of that data for the seven easternmost maps, T-12462 – T-12465 and T-13376, T-13378 was lost.
These maps were re-edited in the summer of 1975. Edit was applied to all maps at the Atlantic Marine Center.

Final review was performed at the Atlantic Marine Center. All pertinent data was forwarded to Rockville, Maryland, office for reproduction and final registration.
FIELD INSPECTION
T-12470

There was no field inspection prior to compilation. Field work accomplished was limited to the recovery and identification of the horizontal control necessary for the aerotriangulation of the project.
21. **Area Covered**

This report covers T sheets 12462 through 12470, T sheets 13338 through 13342 and T sheets 13374 through 13378 of Sumner Strait, Alaska, at 1:10,000 scale.

22. **Method**

Three strips of 1:60,000 scale color photography were bridged by analytical methods to provide horizontal control, compilation and ratio points for 1:30,000 scale photography. The attached sketch of the strips bridged shows the placement of triangulation used in the strip adjustment. A list of closures to control is part of this report. Positions of all compilation points (i.e. 900 points) and control stations have been plotted on the manuscripts by the Coradi, on the Alaska Zone 1 plane coordinate system.

23. **Adequacy of Control**

The horizontal control provided was adequate except for SPIT, 1927. The strip adjustment showed an error of -15 feet in the x direction. The adjacent project Keku Strait, Alaska, PH-6206 which used SPIT, 1927, also showed an error of -15 feet in the x direction. The reason for not obtaining a better closure is not known. Six tie points were used to augment datum tie between strip 1 of Sumner Strait and strips 1 and 11 of Keku Strait. Tie points were averaged between the three strips.

All other control held well within the accuracy required by National Standards of Map Accuracy at 1:10,000 scale.

24. **Supplemental Data**

U. S. Geological Survey quadrangles were used to provide elevations for vertical adjustment of the bridges.
25. **Photography**

Photography was adequate as to coverage, overlap and definition.

COMPILATION REPORT
T-12470

31. **DELINEATION:**

All details were compiled from office interpretation of the B-8 models. Tandem flights of color and infrared photography were provided. The predicted stage of tide at the time of photography was about half tide. No MLLWL was compiled.

32. **CONTROL:**

33. **SUPPLEMENTAL DATA:**

None.

34. **CONTOURS AND DRAINAGE:**

Contours were inapplicable. Drainage was delineated from office interpretation of the photographs.

35. **SHORELINE AND ALONGSHORE DETAILS:**

Shoreline and alongshore details were compiled from office interpretation of the B-8 models.

There was no low water photography.

36. **OFFSHORE DETAILS:**

See Item 31.
37. **LANDMARKS AND AIDS:**

None.

38. **CONTROL FOR FUTURE SURVEYS:**

None.

39. **JUNCTIONS:**

There is no contemporary survey to the west or south. Junctions were made to the east with T-13375 and the north with T-12469.

40. **HORIZONTAL AND VERTICAL ACCURACY:**

No statement.

45. **COMPARISON WITH PRIOR SURVEYS:**

Comparison was made with USC & GS Survey 1749, scale 1:80,000 dated 1886.

46. **COMPARISON WITH EXISTING MAPS:**

A comparison was made with USGS Quadrangle PETERSBURG (B-5), ALASKA, scale 1:63,360, dated 1949.

47. **COMPARISON WITH NAUTICAL CHARTS:**

A comparison was made with Chart 8201, scale 1:217,028, 15th edition, dated November 15, 1969.
ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY:
None.

ITEMS TO BE CARRIED FORWARD:
None.

T-13378    Maconara Point

Field photographs and copies of the field edit ozalids were taken into the field. The mean high water line was verified by visual inspection of the shoreline and ozalids in the field. Isolated rocks, high points of ledges, ledge limits and some shoreline were located by three-point sextant fixes with check angles. Fixes were plotted on boatsheets:

DA-10-3-71    DA-10-7-71
DA-10-4-71    DA-10-8-71
DA-10-5-71    DA-10-9-71
DA-10-6-71    DA-5-1-71

Comparisons were made between boatsheets and ozalids.
Notes have been made on the appropriate photographs and have been cross referenced on the Field Edit Ozalids by photograph number. All times are based on 105°W meridian. Individual reports by manuscript are attached. Either processed or field photographs were used for notes as indicated in the individual reports.

ADEQUACY OF COMPILATION

The photographic coverage of the area was excellent. Compilation was excellent with the few exceptions as noted on individual sheets. Unfortunately, photographic and manuscript coverage was not available for KoK Sheets Bay north of the Level Islands. Shoreline on the northern section of boatsheet DA-10-9-71 (H9221) will have to be edited when manuscripts are available.

TIDE NOTES

The following tide stations were used for hydrography in the Summer Strait area:

- Pt. Baker
- Totem Bay
- Red Bay
- Level Island

AIDS TO NAVIGATION

Non-floating Aids to Navigation within the area were located and are covered in a report titled "Non-floating and Floating Aids to Navigation OPR-448 - Summer Strait, Southeast Alaska 1971." A copy of the above report is included in the appendix.

FIELD EDIT REPORT
MAP T-12470
SUMNER STRAIT - RED BAY (WEST)
SOUTHEAST ALASKA
JUNE 1971

The field edit of map T-12470 was done by LTJC. Russell C. Arnold during June 1971. Inspection was made by small boat and on foot.

METHOD

Field photographs and a copy of the field ozalid were taken into the field. The MHWL was visually inspected with special attention given to areas in question on the ozalid. Changes to the MHWL and ledge limits have been delineated on the processed maps and field photographs as noted. Limits of ledges have been noted on the photographs. All times given are 105°W meridian. All changes delineated on the photograph have been cross referenced on the ozalid. Notes were made on the following processed and field photographs:

69E990 (processed copy) - Notes in red ink.
69E2052 (field copy) - Notes in red ink.

ADEQUACY OF COMPIILATION

The compilation of this map was good. The MHWL is accurate in both configuration and location with exceptions as noted. Ledge limits and foul areas were in agreement except as noted. No fixed aids to navigation were located on this sheet. The field edit of this map is complete.

RECOMMENDATIONS

It is recommended that the map be revised in accordance with the notes on the Field Edit Ozalid and photographs and the map be accepted as an advance manuscript.

Respectfully submitted,

Russell C. Arnold
LTJC. NOAA
SPECIAL REPORT
ON
GEOGRAPHIC NAMES
OFR-448
SOUTHEAST ALASKA
SOUTH KIKA STRAIT - SUMNER STRAIT

NOAA SHIP DAVIDSON

CDR GERALD C. SALADIN
CHIEF OF PARTY
1971
The enclosed USGS Petersburg (B-4), (B-5), (B-6), (C-4) and (C-6) Alaska quadrangle sheets were used for geographic names identification along with the enclosed charts 8174 and 8201.

On August 29, 1971 Mr. Clarence Louis and Mr. Harry Coulter, both of Wrangell, Alaska, were interviewed. Mr. Louis has been a resident of Wrangell for 77 years and has fished extensively throughout the Sumner Strait area. Mr. Harry Coulter has been a resident of Wrangell since 1900. He has fished and done extensive navigating aboard tugs and steamboats in the Sumner Strait area.

On August 30, 1971 Mr. Laurel Allen Woolery (Buckshot), owner of the B.S. Trading Post, Port Protection, Alaska, was interviewed. Mr. Woolery has resided at Port Protection for more than thirty years.

All of the above individuals were shown the USGS quadrangles and the NOS charts. Verified names have been underlined in red on the charts and quadrangles. New or questionable names have been noted and the following remarks apply:

(Note: "GSPP-567" refers to "Dictionary of Alaska Place Names, by Donald J. Orth, Geological Survey Professional Paper 567. Excerpts from the above are included in the appendix of this report.)

NOTE A: WOODEN WHEEL COVE (Port Protection: Lat. 56°18'35"N; Long. 133°36'25"W.) Named after a Wrangell resident who's fishing boat broke down in the cove. He fabricated a wheel out of wood and managed to get into Wrangell. He is since known by his friends as "Wooden Wheel" Johnson. (Clarence Louis-Wrangell)

NOTE B: JACKSON ISLAND (Port Protection: Lat. 56°19'32"N; Long. 133°36'45"W.) Named after Percy Jackson who had a boat shop on the island. (Laurel "Buckshot" Woolery-Port Protection)

NOTE C: EAST ROCK (Sumner Strait: Lat. 56°21'30"N; Long. 133°35'00"W.) Locally known as EAST ROCK (Woolery-Port Protection). Shown on USGS quadrangle Petersburg (B-5) as "TWI INI". Shown in GSPP-567 as EAST ROCK. EAST ROCK is correct as shown on NOS chart 8174.
NOTE D: **HERNIFIELD BAY** (Sumner Strait: Lat. 56°21'05"N; Long. 133°35'13"W.) Previously called "HOFSTEAD BIGHT" after Richard Hofstead who had a small store and herring traps there (Louis and Coulter-Wrangell). Known today as **HERNIFIELD BAY** by the local fishermen. The present name of **HERNIFIELD BAY** should be retained.

NOTE E: **FLICKER CREEK** (Sumner Strait: Lat. 56°20'00"N; Long. 133°33'00"W.) Un-named on largest scale chart of the area (NOS 8201). Named "**FLICKER CREEK**" on USGS quadrangle Petersburg (B-5). and in GSPP-567. Correctly shown on Incomplete Manuscript T-12467 as **FLICKER CREEK**. Locally called "**HUMPY CREEK**" by some of the fishermen (Koolery - Port Protection). The present name of **FLICKER CREEK** should be retained.

NOTE F: **SHINE CREEK** (Sumner Strait: Lat. 56°19'35"N; Long. 133°26'30"W.) So named in GSPP-567 and on USGS quadrangle Petersburg (B-5). Correctly shown on Incomplete Manuscript T-12468. Probably named after a Mr. "Shine" Owens who logged around Buster Bay about 1940 (Koolery - Port Protection).

NOTE G: **BUSTER BAY & BUSTER CREEK** (Sumner Strait: Lat. 56°20'01"N; Long. 133°26'17"W.) Correctly named on Incomplete Manuscript T-12468. Probably named after Mr. "Buster" Neil Grant who used to anchor a pile driver there (Louis-Erigan).

NOTE H: **BIG CREEK** (Sumner Strait, Red Bay: Lat. 56°15'38"N; Long. 133°20'20"W.) Named on USGS quadrangle Petersburg (B-5) and GSPP-567 and Incomplete Manuscript T-12470. Name should be retained on stream as shown on T-12470. Chart 8168 shows "**BIG CREEK**" located between Red Lake and Red Bay. For corrections see **RED BAY CREEK** note below.

**LITTLE CREEK** (Sumner Strait, Red Bay: Lat. 56°16'22"N; Long. 133°20'50"W.) Correct as shown on USGS quadrangle Petersburg (B-5) and noted in GSPP-567 and Incomplete Manuscript T-12470. Chart 8168 shows "**LITTLE CREEK**" incorrectly. The chart should be revised according to the manuscripts.

**RED BAY CREEK** (Sumner Strait, Red Bay: Lat. 56°15'45"N; Long. 133°19'45"W.) Local name given to the creek that joins Red Lake and Red Bay (Koolery, Louis & Coulter - Port Protection and Erangell). As many local fishermen use this name, it is suggested that it be used on chart 8168 and T-13375.
NOTE I: DOUGLAS(S) BAY (Sumner Strait: Lat. 56°28'1"N; Long. 133°17'1"W.) Correct as named. USGS quadrangle Petersburg (B-4) gives a spelling of DOUGLAS. NOS chart 8160 gives a spelling of DOUGLASS. CPSS-567 notes both spellings. For the correct spelling consult USGS chart 706.

NOTE J: TOTUK POINT (Sumner Strait: Lat. 56°27'10"N; Long. 133°26'00"W.) Shown on USGS quadrangle Petersburg (B-5), and Incomplete Manuscript T-13340. This name could not be verified by those interviewed. It is recommended that the name be retained as shown.

Names that could not be verified in interviews have not been underlined or noted and are assumed correct. The charted names on NOS charts 8174 and 8201 are used and accepted by the local fishermen and mariners except as noted.

LANDMARKS AND AIDS TO NAVIGATION

LANDMARKS

No landmarks exist within the area covered by OPR-448.

NON-FLOATING AIDS TO NAVIGATION

The non-floating aids to navigation listed on Form 567 are recommended as landmarks useful for navigational purposes. They should be continued on charts 8160 and 8201 using the geographic positions listed on Form 567.

FLOATING AIDS TO NAVIGATION

The following floating aids to navigation were located within the limits of OPR-448, 1971. Positions were determined by sextant fixes using second order triangulation signals. Geographic positions were computed and compared with those given in Light list Volume III Pacific Coast and Pacific Islands.

NONFLOATING AIDS OR LANDMARKS FOR CHARTS

August 26, 1971

I recommend that the following objects which have (not been) inspected from seaward to determine their value as landmarks be charted on (deleted from) the charts indicated.

The positions given have been checked after listing by ____________________________

Chief of Party.

This form shall be prepared in accordance with Hydrographic Manual, Publication 20.2, Sec. 1-55, 2-59, 6-36, 7-18 to 22 inclusive, and Fig. 79. Positions of charted landmarks and nonfloating aids to navigation, if recharted, shall be reported on this form. Revisions show both the old and new positions. The data should be considered for the charts of the area and not by individuals. The survey sheets. Information under each chart heading should be given.

REVIEW REPORT
T-12470
SHORELINE
October 9, 1979

61. GENERAL STATEMENT:
See Summary, page 6 of this Descriptive Report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC MAPS:
Not applicable.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:
Not applicable.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:
Comparison was made with a copy of Final Registered Smooth Sheet H-9216 (DA-10-4-71). There are no differences.

65. COMPARISON WITH NAUTICAL CHARTS:
Comparison was made with Chart 17381, 1:20,000 scale, 7th edition dated January 3, 1976. The ledge area shown on the chart at lat. 56° 17.7', long. 133° 20.3' is not shown on the map. It was not identified by the field editor and is not discernible on the photographs.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:
This map complies with project instructions and meets the requirements for Bureau Standards and the National Standards of Map Accuracy.
