PROJECT 21420 (PH-6407)

SHORELINE MAPPING
Georgia & So. Carolina
CHARLESTON to SAVANNAH

SCALES = 1:10,000 & 1:20,000
SUMMARY TO ACCOMPANY

DESCRIPTIVE REPORT T-12808

This shoreline manuscript, scale 1:10,000, is one of 18 maps that comprise Project PH-6407, Charleston, South Carolina to Savannah, Georgia. The sketch on page 5 of this report shows the location of T-12811 in the project.

This is a stereo-instrument project. All of the photographs for T-12811 were 1:30,000 scale panchromatic, taken with the "W" camera on March 13, 1964. The stereo-bridge was run and adjusted to field identified control in the Rockville Science Center. Compilation was done with the Kelsh Plotter in the Atlantic Marine Center. Ratio prints at 1:10,000 scale were processed for photo-hydro support, but hydrography was not accomplished as of July 1971.

Field work before compilation consisted of control identification and field inspection. This map was not field edited.

Final review was done at the Atlantic Marine Center in July 1971.

The compilation manuscript was a vinylite sheet 3 minutes 45 seconds in latitude by 3 minutes 45 seconds in longitude.

A cronaflex copy of the final reviewed manuscript and a negative have been forwarded for record and registry.
This report is submitted for nine Shoreline Maps since there are no great differences in terrain, natural or cultural features which would require special treatment.

2. AREAL FIELD INSPECTION

The area lies between Savannah River and Northeastward to a point just South of Edisto Beach. It includes the outside shoreline and a part of Savannah River, Port Royal Sound and St. Helena Sound. The photograph coverage is not complete for each map, therefore, in accordance with instructions from Washington, field inspection has been completed to the limits of the photographs.

The portion bordering the Atlantic Ocean consists of high sand dunes along the ocean with marsh and swamp behind.

The town of Savannah is located just West of the most Southern maps whereas the town of Beaufort is centrally located. Most of the land is owned by private interests and in many cases, special permission is required to enter the properties.

The photographs were taken in the spring of 1964. The photographic quality was good for the entire area. The tones were found to be similar to other areas along the South Atlantic Coast.

Photographs used for field inspection are listed below by individual maps:

<table>

</table>

3. HORIZONTAL CONTROL

Horizontal Control recovery and identification has been completed in accordance with Project Instructions.

The identification of horizontal control was accomplished on enlarged sections of the photographs. This was the first time our party had used the enlarged sections for this purpose. In most cases there was no difficulty and it is believed that the substitute points selected enhanced the accuracy and quality of the points. However, there was difficulty at one station (VENUS 2). The station was pricked direct as there was a small steel stand
over the mark. The substitute point could only be seen good on two of the
four photographs. This point has been marked doubtful.

Horizontal control stations reported "lost", "destroyed", or "not recovered"
are listed below by map:

4. VERTICAL CONTROL

A search was made for all tidal bench marks within the limits of these maps. Form 653A was submitted for each mark. One mark in each group was identified on the photograph, except in a few cases where there was no coverage.

5. CONTOURS AND DRAINAGE

Contours are inapplicable.

Drainage is almost entirely composed of tidal streams. Normal drainage is generally by direct run-off into marsh, swamp or the tidal streams.

6. WOODLAND COVER

Woodland Cover was classified in accordance with the Topographic Manual.

7. SHORELINE AND ALONGSHORE FEATURES

The high-water line has been indicated on the photographs by symbol in accordance with current instructions. No attempt was made to delineate the low-water line.

The field inspector accomplished this phase by several methods; Measurements from identifiable points of detail, by visual inspection from skiff, and by walking the shoreline.
All other shoreline features are adequately covered by field inspection notes on the photographs. The photography is recent, therefore, there have been no great changes.

8. **OFFSHORE FEATURES**

Several piling etc. were located either by sextant fix or theodolite cuts during this survey.

The obstruction reported at Lat. 32-01 - Long. 80-50 chart 1240, could not be seen at low-water.

Your attention is invited to the restricted area in Broad River, near Archers Creek. It is believed that the restricted area should be enlarged on the charts since most of this portion of the river is under fire by the marine guns.

9. **LANDMARKS AND AIDS**

All Nautical Landmarks have been investigated in the field and are reported on form 567.

All fixed Aids to Navigation were investigated and are reported on form 567. Third-order positions were obtained for the following:

- **TYBEE KNOLL CUT RANGE REAR LIGHT, 1964**
- **TYBEE RANGE FRONT LIGHT, 1964**
- **JONES ISLAND RANGE FRONT LIGHT, 1964**
- **PORT ROYAL ENTRANCE, CHANNEL FRONT RANGE LIGHT, 1964**

Four private aids in the Calibogue Sound area are recommended for charting. The aids were located by several methods; Cuts from triangulation stations and photo points, by sextant fixes, or identified directly on the photograph.

10. **BOUNDARIES, MONUMENTS AND LINES**

There have been no boundary lines shown.

11. **OTHER CONTROL**

There were no topographic stations established.

12. **OTHER INTERIOR FEATURES**

All roads were classified in accordance with Photogrammetry Instructions number 56.

Field Inspection of buildings was done in accordance with Photogrammetry Instructions Number 54, revised September 22, 1961.

There were no bridge or cable clearances measured during this survey.

Marsh and Swamp limits have been shown on the photographs where coverage was available.
13. GEOGRAPHIC NAMES

The investigation of Geographic Names will be handled slightly different from that called for in Project Instructions. This change in procedure was recommended by Dr. A. J. Wraight, Chief, Geographic Names Branch.

A systematic and complete investigation of Geographic Names was made from Savannah River North and East to Latitude 32-15. The remainder of the project will be investigated for discrepancies and New Names only.

The change in procedure is due to the recent investigation of names in the project during the years 1955, 1956 and 1957.

The Geographic Names Reports will be submitted at a later date.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA

Transmitting letters for Horizontal Control Identification were mailed to Washington separately for Part 1 and Part 2 of the Project. Part 1 was mailed on 10 July 1964 and Part 2 on 7 July 1964.

Form 567 will be forwarded with this report.

17 July 1964
Submitted by:

Joseph K. Wilson
Chief, Photo Party 6420
21. Area Covered

The bridging covers the Atlantic Coast Shoreline of an area between Charleston, South Carolina to Savannah, Georgia.

22. Method

Nine strips were bridged on the Zeiss C-5 and C-9 stereoplanigraphs to provide control for compilation of shoreline.

<table>
<thead>
<tr>
<th>Strip No.</th>
<th>Photos</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</tr>
</tbody>
</table>

Strip #2 consisting of photos 64W 1184 - 1203 was not bridged. However, tie points were dropped from Strip #1 to provide control for graphic compilation of the area.

All strips were 1:30,000 scale photography.

23. Adequacy of Control

Control positions were adequate for bridge adjustment. However, the northeast end of Strip #1 was run as a separate bridge due to difficulty in holding the control. Both segments had control station Hernan in common. Tie points between the two bridges were averaged.

Strip #7 was also interrupted due to a water gap and divided into two bridges, #7 and #10.

Strip #3 was ceded at control station Queen because Station Factor (snc) would not hold. This was probably due to error in azimuth.
All other points held within accuracy requirements.
All common pass points between the strips were averaged.

24. Supplemental Data
A number of objects identified as landmarks were used as check control stations and held within accuracy requirements.

25. Photography
Photography was adequate as to coverage, overlap and definition.

26. Recommendations
Ratio prints of Strip #2, at a scale of 1:20,000, have been ordered and will be submitted separately.

Submitted by:

Lawrence Fritz
John T. Gerlach

Approved by:

John D. Perrow, Jr.
Aerotriangulation Report
Project No. 21420
Charleston, S.C. to Savannah, Ga.

Amendment to Report of Nov. 1964

Strip 9-A, consisting of photos 64-W-4329 through 4332, was bridged using three triangulation stations as control. Station Proctor Use, 1932 (SS #1) was of very poor image quality and could not be held in the bridge. A secondary straight line adjustment was applied to the junction area of Strips 8 and 9. This junction is weak but within National Map Accuracy Standards.

31. **DELINEATION**

The Kelsh plotter was used. Field inspection was adequate. Photography was satisfactory.

32. **CONTROL**

33. **SUPPLEMENTAL DATA**

None

34. **CONTOURS AND DRAINAGE**

Contours are inapplicable.

Drainage was delineated as inspected or from office interpretation of the photography.

35. **SHORELINE AND ALONGSHORE DETAILS**

The shoreline inspection was adequate and was delineated accordingly.

The approximate low water line was delineated from office interpretation of the photography.

36. **OFFSHORE DETAILS**

None

37. **LANDMARKS AND AIDS**

Appropriate copies of Form 567 for Aids to Navigation have been submitted to the Washington Office under date April 29, 1966.

There are no landmarks.
38. CONTROL FOR FUTURE SURVEYS
None

39. JUNCTIONS
Junctions have been made with T-12809 to the east, T-12810 to the south, T-12615 to the west and north.

40. HORIZONTAL AND VERTICAL ACCURACY
No statement

46. COMPARISON WITH EXISTING MAPS
Comparison has been made with U. S. G. S. Quadrangle PARRIS ISLAND, S. C., scale 1:24,000, dated 1955.

47. COMPARISON WITH NAUTICAL CHARTS
Comparison has been made with Chart 240, scale 1:80,000, 6th edition revised 4-20-64.

**Miscellaneous**

**Field Completion Additions and Corrections to the Manuscript**

42. Additions and corrections furnished by the field completion survey have been applied to the manuscript. The manuscript is now complete except as noted under item 43.

**Compiler**

**Supervisor**

**Remarks**

**USCOMA-DC 1820-3 P-61**
I recommend that the following objects which have (have not) been inspected from seaward to determine their value as landmarks be charted on (deleted-from) the charts indicated.

The positions given have been checked after listing by

R. E. Smith

J. Bull, Director, Atlantic Marine Chief of Party

This form shall be prepared in accordance with Hydrographic Manual, Publication 20.2, Sec. 1-55, 2-39, 6-36, 7-18 to 22 inclusive, and Fig. 79. Positions of charted landmarks and nonfloating aids to navigation, if redetermined, shall be reported on this form. Revisions shall show both the old and new positions. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.

* TABULATE SECONDS AND METERS
REVIEW REPORT T-12808

SHORELINE

July 19, 1971

61. GENERAL STATEMENT:

See Summary on page 6 of this Descriptive Report.

An ozalid comparison print, pages 27 through 32, with differences noted in Items 62, 63, and 64, is bound with the original of this report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

A comparison was made with Survey T-10317, FORT FREMONT, S.C., scale 1:10,000, dated 1955. Differences between this map and T-12808 are shown in blue on the comparison print.

In general, the mean high water line on T-10317 is several meters to seaward from the mean high water line on T-12808. Considerable erosion is evident in the Bay Point area.

T-12808 supersedes T-10317 for charting purposes and will be superseded by parts of TP-00274 and TP-00275, Project PH-7101, when they are completed.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A comparison was made with U.S.G.S. Quadrangle PARRIS ISLAND, S.C., scale 1:24,000, dated 1957. Differences between this map and T-12808 are shown in brown on the comparison print.

Shoreline on the south side of Parris Island differs by as much as 200 meters; the T-12808 shoreline is south of the U.S.G.S. shoreline. Stream alignment varies considerably and there is much evidence of erosion around Bay Point.
64. **COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:**

No contemporary survey was available, but a comparison was made with a verified copy of the smooth sheet for H-5564, scale 1:10,000, dated May 1934. Differences between this survey and T-12808 are shown in purple on the comparison print.

Shoreline on H-5564 differs from T-12808 shoreline approximately the same as shoreline on the U.S.G.S. Quadrangle differs.

65. **COMPARISON WITH NAUTICAL CHARTS:**

A visual comparison was made with Chart 571, scale 1:40,000, 16th Edition, dated October 31, 1970. Shoreline and alongshore structures on the chart appear to be approximately the same as on the registered topographic survey. Therefore, no differences between the chart and T-12808 are shown on the comparison print.

66. **ADEQUACY OF RESULTS AND FUTURE SURVEYS:**

This survey complies with Project Instructions, Bureau requirements, and the National Standards for Map Accuracy. No accuracy tests were run in the field.

**INSTRUCTIONS**

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

1. Letter all information.
2. In "Remarks" column cross out words that do not apply.
3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
