**WASHINGTON OFFICE REVIEW BY (IV):** Jeter P. Battley

**DATE:** May 1967

**REMARKS:**
This project is comprised of thirteen shoreline manuscripts compiled at 1:20,000 scale, (T-13100 through T-13112), four manuscripts compiled at 1:10,000 scale, (T-13113 through T-13115) and three 1:5,000-scale manuscripts, (T-13116 through T-13117). The area covered is the east coast of Florida from Cape Kennedy to just south of Jupiter Inlet. The maps were compiled as a base for hydrographic survey operations and to update marine charts of the area. Two manuscripts, (T-13218 and T-13141) were added to the project after hydro operations were begun and are discussed in this summary.

Field inspection was accomplished during Sept.-Oct. 1966 and was limited to the recovery and premarking of control.

The project area was flown in November 1966. Infrared and color photography was taken.

Stereoplanigraph bridging of the color photography was begun in April 1967 and continued through October 1967. To support hydrographic survey operations, the bridging data was supplied the Washington compilation section as each of nine strips were bridged. Strips #2 through #8 were bridged by stereoplanigraph methods. Strip #1 was bridged analytically. All bridging photography was 1:40,000 scale. Some difficulty was experienced in bridging the project area - (see the Plot Report for details).

The manuscripts were compiled as bridging was received from April 1967 through February 1968. Ratio photographs were prepared in the usual manner for photo-hydro support use. The photographs prepared were both infrared and color. The field ratio prints, cronaflex copies of the manuscripts and discrepancy ozalids were sent to the field, as completed, to expedite hydro activities. Two new manuscripts were added to the project after hydro operations were begun to develop
more of the Loxahatchee River which empties into Jupiter Inlet (T-13141, 1:10,000 scale), and T-13218, 1:5,000 scale to further develop the Ft. Pierce harbor area. This accounts for compilation activities extending to June 1968. In the area of the 1:10,000 scale manuscripts - 1967 1:30,000 scale color and infrared photography was available for compilation. In the area of the two 1:5,000 scale manuscripts (T-13116 and T-13117), 1:15,000 scale color photographs were available. T-13218 (1:5,000 scale) was compiled at 1:10,000 scale on the B-8 stereoplotter from 1:40,000 scale photography and then enlarged to 1:5,000 for a hydro support manuscript. This manuscript is thus considered somewhat substandard in accuracy. All compilation was achieved on the B-8 stereoplotter.

Field edit operations were begun in November 1967 and were completed in 1968. To resolve some landmark and aid problems, provide hydro support, and to further clarify differences in compiled features for Marine Charts, additional field work was accomplished in February 1969. Field edit operations required the location of most of the daybeacons throughout the project area and verification of compiled features.

The application of field edit corrections and/or additions was accomplished in the Washington compilation office as received from the field with some interruption for higher priority projects. Field edit application and final review was completed in November 1969. As field edit corrections were applied to each T-sheet and checked for completeness, a cronaflex copy was ordered for the Marine Chart Division. Hydro verification was being accomplished at the same time of final review and close liaison was maintained between sections.

Registration Manuscript Copy will be registered in the Bureau Archives under their respective T-numbers.

PHOTOGRAMMETRIC PLOT REPORT
Job PH-6710
Cape Kennedy to Jupiter Inlet, Florida

October 27, 1967

21. Area Covered

This report covers the bridging of the Florida east coast from Cape Kennedy to Jupiter Inlet. Included in this area are T-sheets T-13100 thru T-13112 at 1:20,000 scale, T-13113 thru T-13115 and T-13141 at 1:10,000 scale and T-13116, T-13117 and T-13218 at 1:5,000 scale.

22. Method

Eight strips were bridged by stereoplanigraph methods and one strip (Strip #1) by STK methods. All were adjusted by the IBM 1620 method. Strip #1 (66-L(C)-8716 thru 8731) was bridged holding six stations as control and three stations plus tie points as checks. Strip #1-C (66-L(C)-8708 thru 8716) was adjusted holding five control stations with two stations as checks. Strip #2 (66-L-8822 thru 8832) was adjusted on four stations. Strip #3 (66-L(C)-8696 thru 8702) was adjusted on four stations with tie points as checks. Strip #4 (66-L(C)-8738 thru 8748) was adjusted on four stations with tie points as checks. Strip #5 (66-L(C)-8768 thru 8799) was adjusted on five stations with two stations and tie points as checks. Strip #6 (66-L(C)-8782 thru 8797) was adjusted on five control stations with tie points as checks. Strip #7 (66-L(C)-8773 thru 8779) was adjusted on three stations. Strip #8 (66-L(C)-8804 thru 8821) was adjusted on three stations with tie points as checks.

All plates were drilled by the PUG method. Tie points between strips were averaged.

23. Adequacy of Control

Horizontal control complied with project instructions. Most of the control stations were premarked with additional substations selected on color photos taken with a hand-held camera. These photos were used before the strip photography was available. Many of the images selected on the hand-held photographs could not be determined on the strip photography. In some cases the premarked stations could not be seen clearly in the strip photography.
Stations which could not be held within National Map Accuracy Standards and the probable reasons for the source of error are as follows:

**STRIp #1**

- BET, 1967, SS "A" and SS "B" - Could not be clearly seen on the 1:40,000 scale photography.
- POLE (TEMP), BASE PT. "C", 1967, Panel, SS "A" and SS "B" - The positions of this station and its substations were determined by a short baseline method. With the small angle involved and the evidence of bridging residuals, this station was treated as a passpoint between Strips #1 and #8.
- PIERCE, 1963 - Only the 1:40,000 scale target was considered as a good point in Strip #1. All other substations were dropped from the adjustment.

**STRIp #2**

- RADAR, 1955, SS "A" was a very poor image point on this strip and was dropped from the adjustment.

**STRIp #5**

- VALKARIA, 1960 (Target) and TURKEY CREEK, 1877 (Target) gave large residuals in the adjustment phase and were dropped. The substations for these stations were used in place of the targets and showed good residuals in the adjustment.

**STRIp #6**

- TRIPOD 3, 1963, SS "A" - No reason could be determined for this station not holding in the adjustment. It was dropped from the bridge.

**STRIp #7**

- ARTESIA, 1953, SS "A" - No reason could be determined for the error in this station. Since two companion points held, the substation was dropped.

**STRIp #8**

- POLE (TEMP), BASE PT. "C", 1967 - See note under Strip #1.

24. Supplemental Data

Local USGS quads were used for elevations during bridging operations.
25. **Photography**

Photography was adequate as to coverage, overlap, definition and quality.

31. **Delineation**

This manuscript was compiled on the B-8 stereoplotter at a scale of 1:5,000 using 1:15,000 scale color plates. Infrared photographs ratioed to manuscript scale were used for a graphic refinement of the MHWL. The manuscript was reduced to 1:20,000 on cronaflex and made part of sheet T-13108.

Points were positioned along the shoreline to facilitate hydrographic signal location and chronapque ratio prints of the photography were resected to the manuscript in the standard manner for photo hydro support.

This manuscript was also delineated according to Marine Chart specifications to provide a new base for chart 845-SC.

32. **Control**

Identification, density and placement of control was adequate.

33. **Supplemental Data**

Small-craft chart 845-SC at 1:40,000 scale dated August 1966 was used as an aid in locating Lts., daybeacons, and landmarks in the area. Geological Survey Quad., Fort Pierce, Florida, dated 1949, scale 1:24,000 was used for Geographic Names Standard.

34. **Contours and Drainage**

Inapplicable

35. **Shoreline and Alongshore Details**

Delineation of the shoreline and alongshore details was accomplished by office interpretation of the photographs.

36. **Offshore Details**

No comment.
37. Landmarks and Aids

Four aids to navigation and one landmark have been photoidentified and shown on the manuscript.

38. Control for Future Surveys

No comment.

39. Junctions

Junction has been made and is in agreement to the North with T-13107 (1:20,000) to the South with T-13117 (1:5,000) and to the West with T-13108 (1:20,000) and T-13218 (1:5,000). There is an all water area to the East.

40. Horizontal and Vertical Accuracy

No comment.

41.-45. Inapplicable

46. Comparison with Existing Maps

Comparison has been made with Geological Survey Quad., Fort Pierce, Florida, dated 1949, scale 1:24,000.

47. Comparison with Nautical Charts

Comparison has been made with Nautical Charts #1247 scale 1:80,000, revised to 3-6-67, also 845-SC scale 1:40,000, dated August 20, 1966.

FIELD EDIT REPORT

JOB PH-6710

MAPS T-13106 thru T-13109
(T-13116, 13117, T-13118 covered by T-13108)

In accordance with Instructions - Field Edit - Job PH-6710;
Chart Topography, Cape Kennedy to Jupiter Inlet, Fla. (1413)

51. METHODS

The mean high-water line along the ocean front was verified
by visual inspection and measured distance from the foliage line,
at approximately one mile intervals, the measurement being re-
corded on the Color transparencies.

Compiled shoreline along the Indian River was visually veri-
fied from a small boat. Requests for corrections, additions and
deletions are indicated on a cronaflex copy of the manuscript,
labeled PLANE TABLE SHEET with reference to the photograph by
number on which the information is shown.

Streets and roads were travelled to verify existence and
classification.

No landmark building, other than those mapped were noted
during field edit.

Landmarks and aids to navigation for the most part were
verified by Plane table, those not verified by Plane table were
close to shore, and were verified by visual inspection. Aids
located by Plane table have been circled on the PLANE TABLE
SHEET in violet ink, and identified by their respective number.
The plotted positions have not been scaled. Form 567 is sub-
mitted for only those aids located by Plane table and those
that are identified on the photographs (transparencies). Form
567 is submitted for all landmarks.

Additions, deletions and corrections have been noted on
the Cronaflex for each map labelled PLANE TABLE SHEET with
crossreferencing to the photographs.

Violet ink was used for all field edit notes.
52. ADEQUACY OF COMPILATION

After application of field edit corrections, additions and deletions, compilation will be adequate for Chart Topography.

53. MAP ACCURACY

A large number of daybeacons, piling and piers were located by ground survey methods (Plane table). During location, Compiled objects such as lights, pier ends, tanks, etc., were used as or to determine Plane table positions, thus providing a test of the features used to be accurate.

54. RECOMMENDATIONS

None offered.

55. EXAMINATION OF PROOF COPY

Not required.

submitted 5/15/68
Robert S. Tibbetts
61. General Statement

(See Summary) T-13116 is a 1:5,000 scale manuscript compiled to provide a base for hydrography at a larger scale in Fort Pierce Inlet. The area was covered by T-13108 at a scale of 1:20,000. All field edit was resolved on T-13108. Review was accomplished on T-13108 and a close comparison was made to see that the two surveys were identical for compiled features. Refer to paragraph 31 of the Compilation Report and the Project Diagram.
