U.S. COAST AND GEODETIC SURVEY.

J. S. Mendenhall, Superintendent.

State: New York

DESCRIPTIVE REPORT.

Locality:
Southern Shore of East End of Long Island from Southampton to Napeague Light House Station

1892

Chief of Party:
C. J. Sandella
The general character of the Country is low and sandy, interspersed with ponds and creeks, shores low and sandy, with three lines of breakers, the beach is soft, a stranded ship would not survive a heavy gale and the crew should leave her as soon as possible.

**Arms**

The sand dunes are shifting and move from the S.W. to N.E. and it is impossible to preserve a D. Signal on these dunes as they are shifted by every heavy gale of wind, and in most instances are undermined by heavy seas.

**Vegetation**

Salt and Fresh grass, about one third of the land is Cultivated, one third in grass and one third barren.

**Fruit Gardening**

Is the principal trade in this locality. Rail Road and Water Communication to New York City and Brooklyn.

South Hampton, Bridge Hampton, West Hampton, East Hampton, and Amagansett are Small Villages, and in Summer are used for health and pleasure visits. Hotels and private Jerseying Houses at each of these resorts.
This descriptive report applies to the country surveyed from South Hampton to Naples in Life Saving Station No. 9, and is included on two and one half Please Table Sheets during the season from July 1st to October 30th, 1891, on Scale 1:5,000.

L. J. Trachela
Assistant
U. S. COAST AND GEODETIC SURVEY.

T. C. Mendenhall, Superintendent.

State: New York

DESCRIPTIVE REPORT.

Topographical Sheet No. 2053.

LOCALITY:

Southern Shore of the East End of Long Island, from Napeague Life Saving Station to Montauk Point.

CHIEF OF PARTY:

C. T. Bardelle.
From Amagansett to the boundary line which divides Opeague from Montauk, is low and sandy, with innumerable sand dunes ranging from five to twenty feet high, which are constantly changing with every severe gale.

The outer shore is composed entirely of fine white sand, and generally with heavy surf washes away the shore some thirty feet, which in a few days with very moderate weather and a small swell from the ocean, washes the sand to its former place.

On the north shore there are seven large fish factories.

From the boundary line to Split Rock Point. There is nothing of note, only its high hills thinly wooded. On the south end of Opeague Harbor, there is an extensive marsh about two and one quarter miles long and one mile wide in some places. Where large quantities of hay is cut.
