This sheet, a modern one, shows the harbor of Portsmouth and vicinity, scale 1:10,000. The projection on this sheet appears erroneous, the meridional line not crossing the parallels at right angles, (on the photograph). This causes difficulty in adjusting the shore line and representation of the topographic features.

The shore line has changed but little as are the sharp and exposed points, are rocky.

The changes in the Portsmouth Navy Yard, were not shown; as this information can be obtained directly from the Navy Department, and is largely shown in Chart 0329. The only new feature noted is the completed Naval Hospital.

There are but few new roads, the "Ocean Boulevard" a well built road along the shore South of Ordrones Point, with the attendant new buildings being the most prominent.

There are numerous summer hotels and boarding houses and Cottage Communities on the shores.

The area, back from the shore is practically,
unchanged. The roads then out the area, are excellent, and well cared for.

The plating of the Change, or tracing Cloth as instructed to do, is deemed of doubtful utility, owing to the lack of stability of the Vellum, and consequent distortion of the projection plotted thereon.
