Descriptive Report

to accompany Topographic Sheet No
Nameless Bay
between Kupreanof Peninsula and Ugánik Island

Alaska

Scale 1:20000

Surveyed in 1908 by the party on the Steamer Patterson

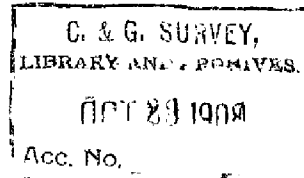

W. C. Hodgkins, Commanding.

This sheet covers an unsettled and little known region having the same general characteristics as the shores of Kupreanof Strait, the Kupreanof Peninsula forming the northern side of this bay as it forms the southern side of the strait.

The land is generally covered with grass and clumps of small bushes. There are scattered spruce trees occurring in small clumps and singly but they are not frequent and there are no large bodies of woodland.

The immediate shores are generally of rather moderate slope, the land rising gradually to rather low mountains, but in the upper, or eastern, part of the bay the mountains approach the shore more closely.

At the extreme head of the bay, comparatively low land extends inland for some distance.

2866

A good sized stream, which drains this region, enters the head of the bay and has filled it for some distance with a deposit of sand and gravel, upon which may be seen at low tide a large number of scattered boulders.

This sheet also includes the shores of the northwestern end of Uganik Strait, the narrow passage separating Uganik and Kodiak Islands. The greater part of this strait, however, is shown on the next sheet to the southward.

The only trace of human agency seen in this region was a log cabin adjoining a gold quartz prospect on the northern shore of the bay near the station called "Dwarf". The cabin was unoccupied but apparently was not permanently abandoned, being probably used annually while the owner of the claim is doing his assessment work.

Respectfully submitted,

W. C. Hodgkins

Assistant Coast and Geodetic Survey,
Commanding.

September 17, 1908.
