DESCRIPTIVE REPORT TO ACCOMPANY SHEET NO. 3.
Survey of Nushagak Bay, Alaska 1909. Scale 1-20,000

LOCATION: Sheet includes shoreline from Protection Point to end of Igushik River, Nushagak Bay.

SURVEY METHOD:
At the time that the survey of the shoreline was commenced, no data was available for the construction of a projection. Therefore a sheet was laid out by plotting by distance and angles, positions of stations (Nichols, Tec, Pro) and likewise hydrographic signals Far, Nob and Near. These latter were computed from the main scheme. A plane table was used one day on the sheet from Nichols spit northward and the shoreline run in with it is shown by full line. The rest of the shoreline was sketched in from sextant cuts and notes.

FEATURES SHOWN:
Culture adjacent to shoreline shown.

NATURE OF COAST:
Regular shore with a few shingle spits. Coastal plain lies back of shore line. Country is low and rolling. Many small lakes are scattered over it. It is covered with tundra and alders.

S. W. Tay

Approved:
Assistant C. & G. Survey Comit's.
