DESCRIPTIVE REPORT.

Tr. Sheet No. 3488 - 3489.

LOCALITY:

Yaquina Bay
and River

1914

CHIEF OF PARTY:

J.W. Hampsire
Descriptive Report to Accompany

Topographic Sheets 34 & 3489.

Yaquina Bay and Yaquina River; Oregon

September-October 1914.

John W. Hauplin,
Chief of Party.

1. LIMITS: Topographic sheet No. 1 is a revision of original topographic sheet, register No. 1086 (1868), of Yaquina Bay Oregon. The original sheet extends from the Yaquina or Cape Foulweather Lighthouse, on the north, along the sea coast to a point about two nautical miles south of Yaquina Bay Entrance, and up the Bay from the Entrance, to what was then called Hoxie’s Cove and now called King’s Slough. The portion of this original sheet which was revised, consists of the inside or Bay shoreline and low water line, including King’s Cove, a survey of the town of Newport, and a placing on the chart of all other improvements such as houses, wharves etc.

Sheet No. 2 extends from King’s Slough to the town of Toledo. Original topographic sheet, register No. 1754, covered part of the ground within the limits of sheet No. 2, but the topography on the old sheet is so scant and incomplete and very much in error in places, it was necessary to re-run this, and make a complete sheet.
2. CONTROL. The topography is based on a scheme of triangulation extending from Yaquina Bay Entrance to Toledo, and comprising thirty figures and sixty stations in the main scheme. The azimuths of this scheme all depend on the line from Yaquina Lighthouse (unused) to a Life which was recovered and pointed upon from an eccentric station on the Old Lighthouse, thus joining with the coast triangulation. The distances all depend upon a base line which was measured by this party, with an Invar tape, on the sand flats, across the Bay from the town of Newport. In compliance with my instructions, to locate natural or artificial objects shown on the old sheets, three points were located on sheet No. 1, which are common to both the old and new work, namely a Old Hotel, a Old Rock, and o Joe. a Old Hotel is the S. E. corner of the "Ocean House", which was built in 1867. a Old Rock is the N. W. one of two rocks off Coquille Point which go bare at L. W. o Joe is the highest point of a small rock island locally known as "Jumpoff Joe". This is shown on the old sheet as a point of land, but now it is an island at H. W. Besides these three points, the Lighthouse on Yaquina Head may also be used. This was built after the old topographic work was done, but it was visited and inspected, and seems to be plotted on the old sheet very close to its correct position in relation to the surrounding topography.

Three points were located which are common to sheet No. 2 and the old sheet, register No. 1754. These are a Old Rock, previously described, a Old Wharf, which is the S. W. corner pile of an old wharf at Cysterville; and a Old House, the foundation of which was recovered with the assistance of Mr. Tommy Furr who was rodman on the party of Messrs. Chase and Forney in 1869.

In compliance with instructions to connect the triangulation with marks used in the work of dredging which had been recently done, twenty-two range marks were located by triangulation which were used in that work. These ranges were numbered front and rear range from one to eleven. These numbers do not in any
way refer to the ranges themselves other than in the records for the sake of keeping track of them. Besides these, six stations were located by observed azimuth and measured distance, which were used by the U. S. Engineers in their survey of part of Yaquina River.

3. METHODS AND RESULTS: The methods used were those generally employed in a planetable survey in a region of this character. Rod readings or intersections were taken on most all of the objects located, and they are considered very accurate. The contours are sketched, and are intended to show the general trend of the country. Elevations were taken by distances obtained from intersections on most all of the prominent hills. On sheet No. 1, no definite point could be found south of the entrance to the Bay to locate by triangulation, either natural or artificial, which was in existence at the time of the original topographic survey in 1868.

4. TOWNS AND SETTLEMENTS: Newport is the largest town within the limits of this work. The part of Newport which is located on the ocean front is called Nye Beach. Newport is of considerable importance as a summer resort. There are a half dozen hotels in the town, and thousands of visitors flock there during the months of July and August, when the hot weather becomes intense in the valleys.

Toledo is the next town in importance, and lumber is the principal industry. Oystercity has only a few houses, and most of the population is engaged in oyster cultivation. The village of Yaquina is not of much importance except for the fact that it is the terminal of the C & E Railroad. Cysterville is nothing but a flag station now with but one house, and Onetta is no longer in existence. There are a number of houses along the River and on the sloughs, which have been built since 1868, as practically no houses are remaining that are shown on the original topographic sheets.

5. OCCUPATIONS AND INDUSTRIES: The principal occupation in Newport is catering to the summer tourist, and the town has most of the conveniences to accommodate several thousand visitors. Lumbering is the principal occupation in Toledo, where there is a saw-mill, dairy, shops, and stores. The fishing industry along the River consists in oystering, crabbing, clamming, and salmon fishing, but none of...
these occupations are of very much importance. Farming is done on a small scale and some cattle and a few sheep are raised on the marshes.

5. GENERAL DESCRIPTION: The coast is rugged and raggy with many outlying rocks and reefs. The country is mostly covered with a heavy growth of fir, pine and spruce trees. These have apparently been burned or cut away in places, but a second growth has sprung up, and in places young alder trees grow in abundance. Yaquina Head is void of trees, and considerable clearing has been done in the vicinity of the towns and farm houses. For the most part, the river shores are abrupt and rise to an elevation of several hundred feet. There are a number of sloughs which are shallow, marshy, and muddy. Most of the flats and shoals in the River consist of soft mud. No detail description is given, as it is thought the topographic sheets are sufficient in themselves to show all the important features.

Respectfully Submitted,

John W. Maypun.

Chief of Party.

DESCRIPTIVE REPORT TO ACCOMPANY

TOPOGRAPHIC SHEETS LAND No. 2  3456-3457

YACQUINA BAY AND YACQUINA RIVER, OREGON

SEPTEMBER-OCTOBER 1914.

JOHN W. HAUPIN,
Chief of Party.

1. LIMITS: Topographic sheet No. 1 is a revision of original topographic sheet, register No. 1066 (1869), of Yaquina Bay Oregon. The original sheet extends from the Yaquina or Cape Foulweather Lighthouse, on the north, along the sea coast to a point about two nautical miles south of Yaquina Bay Entrance, and up the Bay from the Entrance, to what was then called Hoxie's Cove and now called King's Slough. The portion of this original sheet which was revised, consists of the inside or Bay shoreline and low water line, including King's Cove, a survey of the town of Newport, and a placing on the chart of all other improvements such as houses, wharves etc.

Sheet No. 2 extends from King's Slough to the town of Toledo. Original topographic sheet, register No. 1754, covered part of the ground within the limits of sheet No. 2, but the topography on the old sheet is so scant and incomplete and very much in error in places, it was necessary to re-run this, and make a complete sheet.
2. **CONTROL.** The topography is based on a scheme of triangulation extending from Yaquina Bay Entrance to Toledo, and comprising thirty figures and sixty stations in the main scheme. The azimuths of this scheme all depend on the line from Yaquina Lighthouse (unused) to Life which was recovered and pointed upon from an eccentric station on the Old Lighthouse, thus joining with the coast triangulation. The distances all depend upon a base line which was measured by this party, with an Invar tape, on the sand flats, across the Bay from the town of Newport. In compliance with my instructions, to locate natural or artificial objects shown on the old sheets, three points were located on sheet No. 1, which are common to both the old and new work, namely a Old Hotel, a Old Rock, and o Joe. a Old Hotel is the S. E. corner of the "Ocean House", which was built in 1867. a Old Rock is the N. W. one of two rocks off Coquille Point which go bare at L. W. o Joe is the highest point of a small rock island locally known as "Jumpoff Joe". This is shown on the old sheet as a point of land, but now it is an island at H. W. Besides these three points, the Lighthouse on Yaquina Head may also be used. This was built after the old topographic work was done, but it was visited and inspected, and seems to be plotted on the old sheet very close to its correct position in relation to the surrounding topography.

Three points were located which are common to sheet No. 2 and the old sheet, register No. 1754. These are a Old Rock, previously described, a Old Wharf, which is the S. W. corner pile of an old wharf at Oysterville; and a Old House, the foundation of which was recovered with the assistance of Mr. Tommy Furr who was roadman on the party of Messrs. Chase and Forney in 1868.

In compliance with Instructions to connect the triangulation with marks used in the work of dredging which had been recently done, twenty-two range marks were located by triangulation which were used in that work. These ranges were numbered from and rear range from one to eleven. These numbers do not in any
way refer to the ranges themselves other than in the records for the sake of
keeping track of them. Besides these, six stations were located by observed
azimuth and measured distance, which were used by the U.S. Engineers in their
survey of part of Yaquina River.

3. METHODS AND RESULTS: The methods used were those generally employed in a
planetable survey in a region of this character. Rod readings or intersections
were taken on most all of the objects located, and they are considered very accurate.
The contours are sketched, and are intended to show the general trend of the country.
Elevations were taken by distances obtained from intersections on most all of the
prominent hills. On sheet No. 1, no definite point could be found south of the
entrance to the Bay to locate by triangulation, either natural or artificial, which
was in existence at the time of the original topographic survey in 1868.

4. TOWNS AND SETTLEMENTS: Newport is the largest town within the limits of this
work. The part of Newport which is located on the ocean front is called Nye Beach.
Newport is of considerable importance as a summer resort. There are a half dozen hotels
in the town, and thousands of visitors flock there during the months of July and
August, when the hot weather becomes intense in the valleys.
Toledo is the next town in importance, and lumber is the principal industry. Oyster
City has only a few houses, and most of the population is engaged in oyster culti-
vation. The village of Yaquina is not of much importance except for the fact that it
is the terminal of the C & E Railroad. Oysterville is nothing but a flag station now
with but one house, and Onetta is no longer in existence. There are a number of houses
along the River and on the sloughs, which have been built since 1868, as practically
no houses are remaining that are shown on the original topographic sheets.

5. OCCUPATIONS AND INDUSTRIES: The principal occupation in Newport is catering
to the summer tourist, and the town has most of the conveniences to accommodate
several thousand visitors. Lumbering is the principal occupation in Toledo, where
there is a saw-mill, dairy, shops, and stores. The fishing industry along the
River consists in oystering, crabbing, clamming, and salmon fishing, but none of
these occupations are of very much importance. Farming is done on a small scale and some cattle and a few sheep are raised on the marshes.
