Coast of Hawaii,
KEAUKOU BAY

U.S.C. & G.S.S. GUIDE
1928

Thos. J. Maher
Chief of Party
DESCRIPTIVE REPORT
to accompany
TOPOGRAPHIC SHEET "C"

AUTHORITY: Orders from the Director, Coast & Geodetic Survey, to Thos. J. Maher, H & G Engineer, dated Nov. 3, 1927.

LIMITS: Keahou Bay and vicinity.

CONTROL: Control for this survey is based on three triangulation stations in the immediate vicinity of Keahou Bay,

METHODS: The usual plane table method was used in making this survey.

A plane table traverse was run along the coast from Signal to the church at Kahaluu. Another traverse was then run along the road from Keahou to this church. These two positions thus determined differed by eight meters and an adjustment was made, taking an average of these two positions. The shore line was next adjusted for this difference.

A traverse was also run from Target to the southern limit of the sheet but no check position was obtainable.

Traverses between the other stations were also run. These were short and closed well so that no further adjustment was necessary.

GENERAL DESCRIPTION:

With the exception of the beach at the inner end of Keahou Bay and the small bight immediately to the north of it, the shore line from the southern limit of this sheet to a point opposite Ho is steep to with a well defined high water line. In the most part it is very rough and ragged and formed by two old lava flows. It is from 15 to 30 feet above the high water line.

From Ho to the northern limit of the sheet it is low and flat. Between Ho and Buul is a long flat gravel beach and from there to the sand beach at Kahaluu there are grassy stretches with scattered patches of coconut palms.
That section of the shore line included between the lines of the lava flow is exceptionally rough and although a small trail was found by the party, travel along the shore in this locality is rather difficult.

From offshore the lava flow north of Keahou Bay is fairly shaped in appearance. As noted on the sheet, it is practically barren with only an occasional scrub bush or tree thereon.

This flow is very old as the authorities in charge of the observatory at Kilauea state that they have no information concerning the date of its occurrence.

ROADS AND TRAILS:

There are two roads running out of the village of Keahou, one across the lava bed thru the village of Kahaluu and the other in a northerly direction across the lava flow to connect with the main island highway or what is called the Government Road. Both of these roads are of hard dirt and lava and are in fair condition.

A trail from the village of Keahou leads up over the hill to connect with the Government Road, beyond the limits of this sheet.

Small foot trails lead out from the village of Keahou in both directions along the shore but they are very poor and hard to follow at times.

CHANGES: No marked changes in the shore line were noticed since the previous survey.

TOWNS: Keahou and Kahaluu are both small settlements located on the shore line. There is a post office at Keahou and inter-island boats stop there with supplies and mail for Kahaluu and the settlements along the Government Road.

The reef off of Kahaluu is impassable even to small boats.

POSITIONS: A list of plane table positions are attached herewith.

Respectfully submitted,

Francis L. Gallen
Francis L. Gallen, H & G.E.,
U.S. Coast & Geodetic Survey.

[Signed]

DEPARTMENT OF COMMERCE  
U. S. COAST AND GEODETIC SURVEY  
WASHINGTON  
July 31, 1926.

SECTION OF FIELD RECORDS

Report on Topographic Sheet No. 4354
Keauhou Bay and vicinity, Hawaii
Surveyed in 1928
Instructions dated November 3, 1927

Chief of Party, T. J. Maher.

Surveyed and inked by P. L. Gallen.

1. The records as well as the plan and character of the survey conform to the requirements of the General Instructions.

2. The plan and extent of the survey satisfy the requirements of the specific instructions.

3. The shoreline between signals Ge and Pa differs somewhat from that on T. 3424 surveyed in 1913. Elsewhere on the sheet the agreement between the two surveys is adequate, but a detailed comparison between the two sheets shows that there is a difference in the latitudes varying from 16 to 24 meters, the longitudes being identical. The Division of Geodesy states that the triangulation on the old sheet is unadjusted which probably accounts for the differences.

4. No additional surveying is required.

5. The character and scope of the surveying and field drafting are excellent.

Approved:

Chief, Section of Field Records (Charts)

Chief, Section of Field Work (H. & T.)
TOPOGRAPHIC TITLE SHEET

The Topographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.
