State: Alaska

LOCALITY:
Mitkof Island
Wrangell Narrows-South
Ledge to Green Pt

1929

CHIEF OF PARTY:
H. A. Colton
DESCRIPTIVE REPORT

TOPOGRAPHIC SHEET "A"

S. E. ALASKA

WRANGLELL NARROWS

SOUTH LEDGE to GREEN POINT

1929

E. W. EICKELBERG, CHIEF OF PARTY, C. & G. S.
DESCRIPTIVE REPORT
TO ACCOMPANY TOPOGRAPHIC SHEET "A"
WRANGELL NARROWS, ALASKA

AUTHORITY: Director's instructions, dated February 19, 1929.

EXTENT: This sheet includes a revision of the topography of Wrangell Narrows, from Latitude 56° 37', Longitude 132° 59', to Latitude 56° 45', Longitude 132° 57'.

GENERAL DESCRIPTION: The general appearance of the coast line is the same as shown on photostat # 3110 of this area. The shoreline between high and low water is composed of mud and small boulders. Back of the high water line the ground is heavily wooded, and the trees grow down to the water's edge.

LANDMARKS: All stationary aids to navigation were located by triangulation and their positions are plotted on the sheet. This includes beacons and lights. All buoys were located by the hydrographic party by sextant fixes.

CONTROL: The triangulation stations shown, furnished ample control for this work, and are the stations of the U. S. Engineers.

SURVEY METHODS: The survey was accomplished by the usual plane-table methods. All topographic stations were located by three or more intersecting cuts. The low water line was located by roding it in at the time of low water. No traverses were run.

The shoreline was located by rod readings from setups at triangulation station. Some changes were found and the revised shoreline is shown in ink. The shoreline transferred from the photostat is shown in pencil.

The topographic stations and low water line were located by Lieutenant (j.g.) P. C. Doran. The shoreline was located by Lieutenant (j.g.) J. C. Partington.

The following reefs were investigated at a minus 3 foot tide; South Ledge, North Ledge, Colorado Reef, and the reef north-east of Danger Point Light. Each of these reefs were verified and the amount each bares at Mean Lower Low Water is given.

The rock swash shown on photostat # 3110 and on chart # 8170 in Latitude 56° 38' 958 m., Longitude 132° 55' 70 m. was not found during the investigation. It is the opinion of the writer that this rock does not exist and should be taken from the chart.
Magnetic observations were made with the declinometer at Vexation Point Beacon, and at topographic station NOT. The index correction for declinometer No. 110 is plus 0°10.8'. See comparisons with compass declinometer No. H-12 at station FAST, Sheet "F", and station DEVIL, Sheet "G".

The inked low water line shown on this sheet was determined as closely as possible at the zero stage of tides, by the usual plane table methods. A special effort was made to be on the ground at mean lower low waters.

Respectfully submitted,

[signature]
Topographer.

Approved and forwarded,

[signature]
Chief of Party.
STATISTICS

TO ACCOMPANY TOPOGRAPHIC SHEET "A"

Area surveyed in square statute miles............ = 0.0
Length of shoreline in statute miles............. = 15.4
Length of low water line in statute miles....... = 13.2
Length of shoreline of rivers in statute miles... = 0.0
Length of shoreline of creeks in statute miles... = 0.0
Length of shoreline of ponds in statute miles.... = 0.0
Length of roads in statute miles.................. = 0.0

Scale of Sheet "A" = 1:10,000
