TOPOGRAPHIC SHEET: D

DEADMAN BAY

Scale: 1:20,000

Instructions dated March 14, 1929.

STR. SURVEYOR

R.R. Lukens, Com'dg.

LIMITS: This sheet covers the area from the entrance to the head of Deadman Bay.

GENERAL DESCRIPTION: Deadman Bay is the northerly arm of ALITAK BAY and eastward of MOSER BAY. It is 14 miles in length, 3 miles wide at the entrance and narrowing down to 1 mile in width at the head. It runs in a general northeast direction, the shoreline being very regular and unbroken by many bights and coves.

The shoreline on the west side of the bay consists of rocky cliffs, low and not very precipitous, and scattered stretches of sand and shingle beaches. Near the entrance to the bay is a rocky island called FOX ISLAND, covered with grass knolls, the highest being about 90 feet (28m), and there are some islets between it and the western shore. (These are shown on Topo. Sheet C, Fox Id. being transferred from that sheet. The peninsula between DEADMAN BAY and MOSER BAY is a high grassy ridge, with a number of summits, and it slopes gradually southward. The mountains on the west side become steeper and more rugged as the head of the bay is approached. Except for alder bushes, thick moss and grass, and a few scattered cottonwood trees, there is no other growth on the land.)
The eastern shore is similar to the western side of the bay with regard to the character of the shore line. HEP POINT is the south end of a sloping ridge with numerous knolls, grass covered for about half their height and containing bare rock the remaining distance. IVOR COVE is a shallow cove, with sand beach, and having a salt water lagoon at its head. This cove affords a fair anchorage for small craft. IVOR POINT is the south end of a steep ridge of numerous knolls of bare rock. A long stretch of sand beach extends from JIM POINT to PEGGY. The mountains at the head of the bay and at the head of ALPINE BAY are very steep and rugged and are snow covered practically the year around.

The head of the bay consists of flats, bare at low water, back of which is marsh grass and cottonwood trees. Numerous ducks abound in this locality.

ALPINE BAY is the eastern arm of Deadman Bay and located near its head. The head of Alpine Bay consists of flats, bare at low water, back of which is marsh grass and cottonwood trees. Alpine Bay affords the best anchorage in Deadman Bay for all size craft.

**CHARACTER OF CONTROL USED:** Three point fixes were used throughout the survey, detail being rodded in. The only exception was a traverse run between BET and HEP.

**CLOSING ERROR OF TRAVERSE RUN:** No closing error was made in the traverse run.

**LANDMARKS:** The most prominent feature in the approach to the bay is FOX ISLAND, which is quite distinctive and has been previously described. ALBUT ROCK, which is a bare rock, 15 feet (4.7m) high and lying 1/2 mile north of FOX ISLAND and about 100 meters off the west shore is quite prominent.
IVER POINT, which is just north of IVOR COVE, and is the southern end of a sloping ridge, is easily distinguished.

DISCREPANCIES FROM OLD WORKS: No previous work had been done in this vicinity.

NEW NAMES:

Well established old names:

Fox Island
