DESCRIPTIVE REPORT

Topographic | Sheet No. MC-33
Hydrographic

LOCALITY
OUTSIDE COAST OF MONTAGUE ISLAND
FROM LATITUDE 60-05 to LATITUDE 60-13.

CHIEF OF PARTY
A. M. SOBIERALSKI, H. & G. E.
DESCRIPTIVE REPORT

to accompany

TOPOGRAPHIC FIELD SHEET MC-33

INSTRUCTIONS DATED: April 15, 1933.

GENERAL DESCRIPTION: Montague Island is high and montaneous with a main ridge ranging in heights from 2,000 to 3,000 feet running longitudinally with the island. Prominent ridges about 2 miles apart run normally from the main ridge to the beach with deep intervening valleys. The seaward ends of these ridges form high triangular bluffs, giving a serrated appearance from off shore. The island is wooded, especially near the shore and extending to elevations as high as 1200 feet.

The beach along the coast is fringed with reefs, large boulders, and offlying rocks. It can safely be said that the shore covered by this sheet is very foul with but few favorable landing places and these only in the best kind of weather. Probably the best landing places to be found along the shoreline are at signals ANT, FALL and in the bight just north of triangulation station V10 1933.

SURVEY METHODS: Triangulation stations Seal Rocks 1902, V10 1933 and Carl 1933 were used for topographic control. A traverse was carried from triangulation station V10 1933 southward to triangulation station Carl 1933. The traverse closed within a satisfactory error.

A traverse was run southward from triangulation station Carl 1933 to topographic signal Rex joining topography on Sheet MD-33, and closed within the allowable error.

A traverse was run northward from Triangulation Station V10 1933 to topographic signal Boat joining topography on Sheet MF-33. Both traverses, namely, from triangulation station V10 1933 northward and from triangulation station Rig 1933 southward on Sheet MF-33 to signal Boat, closed within 25 meters in azimuth and checked flat in distance. Both traverses were adjusted.

The heavy wooded coastline along the beach of Montague Island obscured all land formation. Therefore, all peaks were located by sextant cuts and elevations and form lines were sketched in from the ship. The form line interval on the sheet is 200 feet with multiples of the 260 foot form line dotted. This interval was authorized by the Chief of Party because the character of the work did not warrant a smaller
interval. The 250 foot interval was interpolated because this interval is used on some of the charts, and would otherwise have to be interpolated in the office.

Respectfully submitted,

Approved and forwarded,

A. M. Sobieralski,
Chief of Party,
Commanding, Str. SURVEYOR

Chester J. Beyma,
Aid.
Title: (Par. 56) Outside Coast of Montague Island from Lat. 60°05' to Lat. 60°13'

Chief of Party: A. M. Sobieralski  Surveyed by: C.J.B.  Inked by: C.J.B.

Ship: SURVEYOR  Instructions dated: April 15, 1933 Surveyed in: 1933

1. The survey and preparation for it conform to the requirements of the Topographic Manual. (Par. 7, 8, 9, 15, 16.)

2. The character and scope of the survey satisfy the instructions.

3. The control and closures of traverses were adequate. (Par. 12, 29.)

4. The amount of vertical control that the Manual specifies for -contours-formlines- was accomplished. (Par. 16, 19, 20, 21, 22, 23.)

5. The delineation of -contours-formlines- is satisfactory. (Par. 49, 50.)

6. Not applicable.

7. High water line on marshy and mangrove coast is clear and adequate for chart compilation. (Par. 16a, 43, 44.) Not applicable

8. The representation of low water lines, reefs, coral reefs, and rocks, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41.)

9. Rocks and other important details shown on previous surveys and on the chart were verified. (Par. 25, 26, 27.) No previous surveys.

10. Not applicable.

11. Locations and elevations of summits are given. (Par. 19, 51.)

12. The tree line was shown on mountains. (Par. 16g)

13. The descriptive report covers all details listed in the Manual, in so far as they apply to this survey. (Par. 64, 65, 66, 67.)

14. Not applicable.

15. The descriptions of recoverable stations and references to shore line were accomplished on Form 521. (Par. 29, 30, 57, 67 except scaling of DMs and DPs, 68.) 2 stations - numerous triangulation stations
16. A list of landmarks for charts was furnished on Form 567 and plotting checked. (Par. 16d, e, 60.) No landmarks

17. The magnetic meridian was shown and declination was checked. (Par 17, 52.)

18. The geographic datum of the sheet is Valdez and the reference station is correctly noted. (Par. 54.)

19. Junctions with contemporary surveys are adequate.

20. Geographic names are shown on the sheet and are covered by the descriptive report. (Par. 64, 66k.)

21. The quality of the drafting is good. (Par. 51, 32, 33, 35, 36, 37, 38, 39, 40, 41, 42, 45, 46, 47, 48, 49, 50.)

22. No additional surveying is recommended.

23. The Chief of Party inspected and approved the sheet and the descriptive report after review by P.C.F. A.M. Sobieski

REVIEW OF TOPOGRAPHIC SURVEY NO. 4811 (1933)

Outside Coast of Mountague Island, Gulf of Alaska.
Southwest Alaska.
Surveyed June-July, 1933
Instructions dated: April 15, 1933 (SURVEYOR)

Plane Table Survey - Cloth Mounted.

Chief of Party - A. M. Sobieralski.
Surveyed by - C. J. Beyma.

The records conform to the requirements of the Topographic Manual
with the following exceptions:

a. The form line interval is 200 ft. because the method of elevation
determination made necessary by the character of the area, did not
justify smaller intervals.

b. Form 567 was not submitted and it is assumed that there were no
landmarks for charts which required listing.

2. Compliance with Instructions for the Project.

The survey complies with the instructions.

3. Junction with Contemporary Surveys.

Satisfactory junctions were made with T-4834 (1933) on the north, with
T-4835 (1933) on the south and with the form lines of T-4837 (1933).

This is an original survey of the area.

5. Field Drafting.

The field inking of this survey is satisfactory. The contour lines were
inked considerably heavier than necessary.

6. Additional Work Recommended.

The survey is complete and no additional work is necessary.

7. Superseding Old Surveys.

There are no previous survey of this area.

Examined and approved:

C. K. Green, Chief, Section of Field Records.

C. H. Green, Chief, Division of Charts.

W. E. Bolt, Chief, Division of H. & T.

Chief, Section of Field Work.
