Area Detail Inked: 85.3 Square Statute Miles.

Length of Streams: 23.3 St. Miles (over two hundred meters wide)

Length of Streams: 29.3 St. Miles (less than 200 meters wide)

Length of Coast Line: None.
DEPARTMENT OF COMMERCE
U. S. COAST AND GEODETIC SURVEY

TOPOGRAPHIC TITLE SHEET

The Topographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.

Field No...5

REGISTER NO. 5157

State...South Carolina

General locality...Hills of Charleston Harbor, Ashley River

Locality...Ashley River, Bull's Creek to Grigg's Landing, DRAYTON

Scale 1:21,000 Photographs - October 12, 1933

Date of survey...1934

Compilation - June 18, 1934

Vessel Air Photo Compilation Party No. 21, Charleston, S. C.

Chief of party...E. H. Kirsch

Surveyed by...See data sheet in descriptive report

Inked by...F. W. Hund

Heights in feet above mean sea level to ground to tops of trees

Contour, Approximate contour, Form line interval 200 feet

Instructions dated...November 10, 1934

Remarks: None

...
GENERAL INFORMATION

Statistics:

The total area covered by this sheet is 85.3 square statute miles. No coastal shoreline appears on this sheet and only a small portion of the Ashley River is more than 200 meters wide - a distance of 3.3 miles. However, there are 29.3 st. miles of rivers and sloughs less than 200 meters from shore to shore.

Report:

The area which this sheet covers consists of marsh, timber, and cultivated land, all of which are represented by the various symbols as shown in the topographic manual. In general, this area is of the low coastal plane type with very little relief. The field inspection, report 1933-34 covering all sheets in general will be furnished by Lt. B. H. Higg with Sheet No. 1, Reg. No. 5153.

Photographs:

Photographs from part of two flights were used in compiling this sheet. The 1000 flight with photos 1146 through 1161 were taken at 10:10 A.M. on October 12, 1933, with average half tide and the 1200 flight with photos 1293 through 1303 were taken at 11:50 A.M. with average half tide. All photographs were taken with a standard U. S. Army Air Corps' 5-lens Camera.

CONTROL

Sources:

Triangulation stations put in by G. D. Cowie and R. L. Shoppee 1933 are as follows:

<table>
<thead>
<tr>
<th>Ken</th>
<th>Test, Cowhead Reach</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pier</td>
<td>Le Pont</td>
</tr>
<tr>
<td>R. R. Semaphore</td>
<td>Sheehan</td>
</tr>
<tr>
<td>Seed</td>
<td>Drayton</td>
</tr>
<tr>
<td>Black Beacon No. 1</td>
<td>Bailey</td>
</tr>
<tr>
<td>Faber</td>
<td>Cedar</td>
</tr>
<tr>
<td>Han</td>
<td>Still</td>
</tr>
<tr>
<td>Charm</td>
<td>Rear Range, Cowhead Reach</td>
</tr>
<tr>
<td>Bee</td>
<td>Black Beacon No. 3,</td>
</tr>
<tr>
<td>Aston</td>
<td>Cohen</td>
</tr>
<tr>
<td>Shark</td>
<td>Dryer</td>
</tr>
</tbody>
</table>

Bula
Means, Crummey, Prize, Waring and Pringle were put in by K. G. Crosby 1934.
Run, Jake, Han, Mid, were put in by M. O. Witherbee, 1934.
The blue triangles represent traverse stations computed and field inspection by Lt. B. H. Rigg - 1933. These stations are not marked in the field. Mr. Rigg started the traverse at station SPUR, a cowie station 1933 and ended the traverse at Station WARREN, a Meaney station 1932. The closing error of the traverse was not plottable.

The geographic positions of these traverse stations are:

<table>
<thead>
<tr>
<th>Station</th>
<th>Lat.</th>
<th>Long.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Esso</td>
<td>32° 47' 55.73&quot;</td>
<td>80° 07' 45.15&quot;</td>
</tr>
<tr>
<td>Mill</td>
<td>32° 48' 38.70&quot;</td>
<td>80° 08' 18.25&quot;</td>
</tr>
<tr>
<td>Bridge</td>
<td>32° 48' 59.108&quot;</td>
<td>80° 08' 48.479&quot;</td>
</tr>
<tr>
<td>Bend</td>
<td>32° 49' 05.33&quot;</td>
<td>80° 09' 31.01&quot;</td>
</tr>
</tbody>
</table>

No errors were found in plotting control.

Discrepancies:

No control stations established by other organizations were used in the compilation of this sheet.

Remarks:

The following control stations were not used in the radial plotting or compilation of this sheet:

Aston and R.R. Semaphore. Since there was no field inspection on these two stations they were not spotted on the photos.

Seed and Bula were spotted on the photos but the field inspection seemed to be poor since these stations did not work in well with the other control stations in the smooth radial plot.

Compilation

Method:

The standard radial line method was used as described in the U. S. Coast and Geodetic Survey Notes on the Compilation of Planimetric Line Maps from five lens Aerial Photographs.

Adjustment of Plot:

Little difficulty was encountered in transferring detail to the sheet. Nearly all the photos were very clear with little tilt, except photo 1151. This sheet was badly distorted. Some roads in the heavily timbered areas were rather indistinct, but, in general, the detail was clear.
Note: All the docks mentioned in the table are not indicated on the map, and also not shown on the photographs.

B. G.
Interpretation:

The double-tie rail-road represents two tracks, and the single-tie one. The paved roads are indicated by two full lines; the graded or improved roads by a double dashed line; and the unimproved roads and lanes by a single dashed line.

The full lines bordered by dots represent canals with levees. These symbols appear in the area near the source of Rantowles Creek.

Additional hydrographic signal stations represented by black circles along Rantowles Creek were pricked on the photographs and radial plotted on the celluloid. These points were established by the field party of Lt. E. H. Rigg. 1934. These are most permanent and were not to change on the printed chart. Of the compilation but to remain on the celluloid.

All symbols were taken from the topographic manual, except as stated above.

At the western end of the Bennet R.R. Yards several spur tracks and switches have been omitted for the sake of clearness.

The dock just below the R.R. Bridge over the Ashley River has been destroyed, while the one about one half mile below is being rebuilt after its recent destruction about one month ago.

On the sheet there is a blank strip shown to indicate a right of way for a transmission line. This starts at Lat. 32° 56' Long. 80° 05' and runs in a south, southeasterly direction to Lat. 32° 53' whence it turns almost southeastward to the limits of this compilation.

Information from other Sources:

Conflicting Names:

There are no conflicting names on this sheet. Names on file.

COMPARISON WITH OTHER SURVEYS

Junctions:

Satisfactory junctions were made with the following:

Sheet No. 9, Reg. No. 5161 on the Northeast
24  5176  East
27  5179  East
12  5164  South
13  5165  South
6   5158  Southwest.
Landmarks:

A full list of landmarks and recoverable stations for this area has been submitted with A.S.C. "W" & "K2" by Lt. M. O. Witherbee, 1934.

Remarks:

Ashley River R.R. Bridge: (Bee's Ferry Bridge) Type, Single lift. Horizontal Span (Open) 13.15 meters, clearance mean high-water (closed) 4 feet. width 8.50 meters. Data has not been given on Bradley Bridge over Rantowles Creek and Church Creek Bridge, since the streams which these bridges cross are no of importance to navigation. The present U.S.C. & G.S. chart No. 1239 shows a spur R.R. track running to Cohen Hill; and another running northward from the spur to Lambs Junction no longer crosses the river. These spurs have now been abandoned and consequently have been omitted from this compilation.

The same chart (1239) shows Cohen Canal branching from Sawpit Creek, however, no trace of such a canal could be determined even though a careful study of the photographs was made.

RECOMMENDATION FOR FURTHER SURVEYS

The compilation of this sheet is believed to be accurate thorough and complete for charting purposes and that no additional surveys are necessary. A probable error of not more than 3 meters may be found in detail of importance for charting and not over 6 meters in detail of lesser importance. The value of 3 to 6 meters is high for work on this scale. A better estimate is an accuracy of location of 5 to 8 meters for important points and 5 to 15 meters in other cases.

REVIEW OF PHOTO TOPOGRAPHIC SURVEY NO.

Title (Par. 56) Ashley River - Bulls Creek to Gripp's Landing

Chief of Party E. H. Kirsch

Compiled by P. W. hund

Project HT-162

Instructions dated November 10, 1934.

1. The survey and preparation for it conform to the requirements of the Topographic Manual. (Par. 8; and 16, a, b, c, d, e, g and i.)

2. The character and scope of the compilation satisfy the instructions and the "Notes on the Compilation of Planimetric Line Maps from Five Lens Aerial Photographs".

3. The control and adjustment of the radial plot were adequate. (Par. 12, 29.)

4. There is sufficient control on maps from other sources that were transmitted by the field party for their application to the charts. (Par. 28.) No information taken from outside sources.

5. High water line on marshy and mangrove coast is clear and adequate for chart compilation. (Par. 16a, 43, 44.)

6. The representation of low water lines, reefs, coral reefs and rocks, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41.)

7. Important details shown on previous surveys and on the chart have been compared with this sheet and a statement has been entered in the report regarding the removal from the chart or change in position of important detail such as rocks, lights, beacons, prominent objects, bridges, docks, and structures along the water front.

8. The span, draw and clearance of bridges are shown. (Par. 16c.)

9. The data furnished by the Field Inspection is adequate.

NOTE: Strike out paragraphs, words or phrases not applicable and modify those requiring it. Paragraph numbers refer to those in the Topographic Manual. Use reverse side for extending remarks.
19. The descriptive report covers all details listed in the Manual, so far as they apply to this survey. (Par. 64, 65 and 66.)

20. The descriptive report also contains all additional information required in photo-topography as prescribed in the instructions and in the "Notes on the Compilation of Planimetric Line Maps from Five Lens Aerial Photographs".

21. The descriptions of recoverable stations and references to shore line were accomplished on Form 524, and scaling of positions checked. (Par. 29, 30 and 57.) Submitted with A.C. Sheets. Planimetric control number: T6075. Does not include any recoverable planimetric stations in this area.

22. A list of landmarks for charts was furnished on Form 567 and scaling of positions checked. (Par. 16d, e, 60.) Submitted with A.C. Sheets. T6075

23. The geographic datum of the sheet is N.A. 1927 adjusted and the reference station is correctly noted. (Par. 34.) Adjusted stations used for the relative given in the elevation unit.

24. Junctions with contemporary surveys are adequate.

25. Geographic names are shown on the sheet and are covered by the Descriptive Report. (Par. 64, 66k.)

26. The quality of the drafting is good. (Par. 31, 32, 33, 35, 36, 37, 38, 39, 40, 41, 42, 43, 46.)

27. No additional surveying is recommended.

19. Remarks:

20. Examined and approved: E.H. Kirsch
   Chief of Party

Reviewed in office by: D.G. Jones

Examined and approved: K.T. Adams
   Chief, Section of Field Records

Chief, Division of Hydrography and Topography.
Comparison with other Surveys

1. T-6075, aluminum planetable survey, 1:10,000, 1934, shows shoreline of the Ashley River from lat. 32°52.7' to lat. 32°55.5'. This shoreline agrees very closely with the compilations. There are a few short sections where the surveys differ by 5 to 10 meters which are due to small differences in interpretation and to stretching between rod readings.

2. T-2164 and T-2166 (1894-1895). These surveys show sections of the Ashley River. Comparison indicates only small changes in shoreline. The compilation is detailed and adequate to supersede these older surveys.

3. The marsh shown just above Bees Ferry Bridge was transferred from H-5456 in this office. There is no conflict between the compiled shoreline and soundings on H-5456.

D.G. Jones
