Chief of party. ... Lieut. (j.g.) S. E. Grenell

Photos plotted by: F. E. Hickman

Inked by: ... G. B. Gaines

Heights in feet above to ground to tops of trees

Contour. Approximate contour, Form line interval ...... feet

Instructions dated: ... Dec. 14, 1934

Remarks. Compilation of aerial photos Nos.: M-78, 35 to 48, 69 to 76; 146 to 148

* Blueprint on scale of 1:10,000
--NOTES OF COMPILATION--

One copy of this form must accompany each chart from beginning to completion. The last draftsman, whose name appears on this form, is responsible for it and all personnel will endeavor to keep these forms up to date and correctly posted. This form is very important inasmuch as the final Descriptive Report of the chart compiled is based upon the information contained herein.

Note: See pages 5 to 8a Report for compilation T5550 for discussion of errors of photos due to camera maladjustment. In addition to triangulation traverse along the road across the N.E. edge of this compilation furnished control for this sheet. Comparison with the control survey indicates the accuracy of this compilation to be within the values given on page 3 following. J.L.
31/8/36
REPORT OF COMPILATION:

RADIAL LINE PLOT:

The standard radial line plot method was used. The difficulties encountered were the usual type for these pictures. The "B" wing is out in traverse scale and cuts were taken from the central portion of the print only. This method was employed also for a few of the "B" prints where there was evident distortion.

All control was held except on the edges of distorted prints as noted above. There is sufficient control for a radial plot.

ADJUSTMENT OF PHOTOGRAPHS:

The majority of the photographs have about the average amount of tilt. Radial points were well selected and spaced. It was not necessary to establish additional radial points. There were no unusual difficulties.

INTERPRETATION:

The pictures were clear and detail sharply defined, especially in and near the "B" prints.

There were no unusual features. Several special symbols were used along the waterfront at Belhaven, N. C. Filings were shown with a fine short dashed line. Filing shown on field photo 70-A cannot be found on photographs nor is it indicated on the top sheet.

Shipwrecks were shown by a small cross. Sunken or partially sunken barges were shown by drawing in the outline of the barge when visible. All barges or shipwrecks not visible on the photographs were taken direct from the Topo sheet (E) of this area. (T-6341).

COMPARISONS WITH CONTEMPORARY SURVEYS:

This compilation joins sheet 5551 on the east, same scale, joins sheet 5553 on the west, same scale, joins 5554 on the south, same scale. There is no junction on the north. This compilation has been compared with Topo sheet "E" and "D" by J. A. Bond, 1885. Any differences have been reviewed and corrected in this office.

COMPARISONS WITH OTHER SURVEYS:

The junctions with adjoining sheets were made in this office and are complete and satisfactory. This area is covered by the U. S. C. & G. Survey chart No. 1281 and the shoreline seems to be very much the same. The railroad shown as abandoned on this compilation, should be removed from the chart. New roads have been put in and some of the old ones abandoned. A comparison has also been made with U. S. C. & G. Survey Topo sheets dated 1873, No. 1310 of Belhaven and Topo sheet dated 1872 No. 1273 of area south of Belhaven. It is felt that this comparison is of little value due to obsolescence of these charts. A comparison was made with U. S. Geological Survey, North Carolina, Belhaven quadrangle, surveyed in 1914, corrected to 1932. This comparison shows very little change in the main topographic detail. There are some changes in the roads.

* See review at back of this report.
ACCUACY AND COMPLETENESS:

This compilation should have a probable error not greater than 10 meters in well defined detail and one not greater than 20 meters in detail less well defined.

Comparison with Graphic Control Surveys

On the following graphic control surveys the shoreline has been shown in pencil located with an accuracy only adequate for boat sheet purposes. Recoverable details and plane table stations, however, have been located with the usual degree of accuracy and agree with the compilation except in the cases mentioned below.

**T 6339 (1935), 1:10,000**

Only that portion of the survey for T 6339 in Lower Dowry Creek is common to this compilation. All planetable signals are in agreement except signal "Ox", lat. 35° 32.7', long. 76° 35.5', which falls about 10 meters off the shoreline as shown on this compilation. This is probably a planetable error as the photo plot of the shoreline has been checked at this point and agrees with all other planetable stations in this immediate area.

**T 6340 (1935), 1:10,000; T 6341 (1935), 1:10,000; T 6342 (1955), 1:10,000; T 6343 (1935), 1:10,000.**

The surveys for T 6340, T 6341, T 6342 and T 6343 are in agreement with the compilation.

Details such as piling, wrecks, etc. which in some cases cannot be seen on the photographs were transferred from T 6340 and T 6341 in the field. The position of station "AFL", a stack, was transferred in this office by L. A. M., and checked by R. E. Berry. All details on T 6339, T 6340, T 6341, T 6342 and T 6343 shown on this compilation except buoys, non-recoverable planetable positions and the magnetic declination.

Comparison with Previous Topographic Surveys

**T 1273 (1872), 1:20,000**

The survey for T 1273 covers Pungo River between Wade Point and Pungo Creek. There have been very few changes of topography since the time T 1273 was made. A number of private roads shown on T 1273 have been abandoned, while others appear as trails. This compilation is detailed and adequate in order to supersede T 1273 over the common area.

**T 1310 (1873), 1:20,000**

The survey for T 1310 covers the northern section of Pungo River and its tributaries. T 1310 shows the stream lines to their source together with a swamp symbol. In the immediate vicinity of Belhaven these natural drainage streams have been changed. There are now
numerous drainage ditches in the cultivated areas of this locality. In the areas near Fungo Creek the land is heavily wooded, the upper limits of the streams cannot be seen on the photographs and for this reason these streams have been traced only to the limits which the photos show.

In the area along the north shore of Fungo Creek a number of farms and roads have been abandoned. Other roads now appear as trails in this locality. This compilation is complete and adequate in order to supersede that portion of T 1310 which it covers.

Comparison with H. 5873 and H 5697

No discrepancies. The four sunken wrecks shown on this compilation at lat. 35° 33', long. 76° 39.5'; at lat. 35° 32.75', long. 76° 38.6'; at 35° 32.3', long. 76° 37.7' are shown in pencil on H 5873 and H 5697. These wrecks are not shown on the charts, the graphic control, or the recent hydrographic surveys of this area. They do not appear on the photos covering this area and there are no notes in the field photos concerning them. The compiler is not available for an explanation and the chief of the compilation party who was recently in this office does not know from what authority they were plotted on the compilation. The positions are marked on the celluloid by a prick point indicating that they were plotted positions and they have been left on the compilation though the source of the positions is not known.

Wrecks removed from compilation and hydrographic surveys April 12, 1936. (Capt. John J. Howley letter April 6, 1936)

Comparison with the Chart, No. 1231

The pier at lat. 35° 32', long. 76° 36' and the group of piers at lat. 35° 32.2', long. 76° 37.3' shown on chart No. 1231 are no longer in existence.

No record of the landmarks for charts can be found in the office. According to the descriptive reports, T 6339, T 6340 they were to be submitted in a separate report and probably will be filed as a chart letter when they are received.

Symbols

With reference to page 2 of this report concerning symbols: The symbol for piling was changed to a dot symbol. No distinction was made between shipwrecks and wrecked barges as far as symbols are concerned. The general term "wreck" applies to both. Where a group of exposed wrecks occurs the outline of each wreck is shown and the whole labelled "wrecks". Where isolated wrecks occur the standard symbol is used.

Standard symbols approved by the U.S. Board of Surveys and Maps were used throughout with the exception of the symbol for wrecks when in a group.

March 20, 1936.
April 8, 1936.

To: Commanding Officer,
    Coast and Geodetic Survey,
    Ship MIRAWE,
    Box 1570,
    Norfolk, Virginia.

From: The Director,
      U. S. Coast and Geodetic Survey.

Subject: Wreck Symbols shown on T-5552.

Your letter of April 6, 1936, furnishing information concerning the wreck symbols shown on air photo compilation T-5552, is acknowledged, with thanks. In compliance with your recommendation these symbols will be deleted from the compilation.

(Signed) PAUL C. WILKINSON
Acting Director.
To: The Director
U. S. Coast and Geodetic Survey
Washington, D. C.

From: Commanding Officer
U. S. C. & G. S. MIKANE

Subject: Wreck Symbols shown on T 5552

April 6, 1936

In reply to your letter of April 4, 1936 (80-ERM) inquiring as to the nature of wrecks shown on air-photo compilation No. T 5552 the following information is submitted.

Questioning all members of my party who were engaged on the field work in the vicinity in question fails to elicit any memory of the existence of the wrecks. Mr. E. M. Watt who did the graphic control work states that he had a set-up on the point immediately adjacent to the wrecks shown in Lat. 35° 33', Long. 76° 39.5', and that he would undoubtedly have located them had they been visible.

I have consulted Lieutenant Grenell and he can furnish no information other than that the air-photo compilation sheet was compiled by a comparatively inexperienced draftsman and on account of the pressure of the work the sheet did not receive as careful checking as his subsequent sheets. I would therefore recommend that the wreck symbols in question be expunged from the air-photo compilation sheet.

John A. Bond
Commanding
April 4, 1936.

To: Lieutenant John A. Bond,
U. S. Coast and Geodetic Survey,
Launch MIKAWA,
Box 1570,
Norfolk, Virginia.

From: The Director,
U. S. Coast and Geodetic Survey.

Subject: Pantego Creek, North Carolina -- Wreck symbols shown on T 5552.

In closed are two photostats of sections of your hydrographic surveys Nos. H 5697 and H 5673, on which are indicated in yellow the locations of wreck symbols shown on air photo compilation No. T 5552.

Since these features do not show on the photographs nor on your hydrographic surveys, there is a doubt as to whether they now exist. The paragraph of the review of T 5552 concerning these wrecks is as follows:

"Comparison with H 5673 and H 5697

"No discrepancies. The four sunken wrecks shown on this compilation at lat. 35° 33', long. 76° 39.5'; at lat. 35° 32.75', long. 76° 38.6'; at 35° 32.5', long. 76° 37.7' are shown in pencil on H 5783 and H 5697. These wrecks are not shown on the charts, the graphic control, or the recent hydrographic surveys of this area. They do not appear on the photos covering this area and there are no notes in the field photos concerning them. The compiler is not available for an explanation and the chief of the compilation party who was recently in this office does not know from what authority they were plotted on the compilation. The positions are marked on the celluloid by a pricking point indicating that they were plotted positions and they have been left on the compilation though the source of the positions is not known."

Please furnish this office with any information which may help to clarify the discrepancy.

(Signed) J. H. [Signature]

Acting Director.
REVIEW OF AIR PHOTO COMPILATION NO. T 5552

Chief of Party: S. B. Grenell

Compiled by: D. Gaines

Project: Inland Route North Carolina Instructions dated: Dec. 14 1934

1. The charts of this area have been examined and topographic information necessary to bring the charts up to date is shown on this compilation. (Par. 16a, b, c, d, e, g, and i; 25; and 64)

2. Change in position, or non-existence of wharfs, lights, and other topographic detail of particular importance to navigation which affect the chart, is discussed in the descriptive report. (Par. 26; and 66 g, n)

3. Ground surveys by plane table, sextant, or theodolite have been used to supplement the photographic plot where necessary to obtain complete information, and all such surveys are discussed in the descriptive report. (Par. 65; and 66 d, e)

Traverse run for secondary control / T-639, T-640 and T-641 have been made in this area to supplement the photo plot.

4. Blue-prints and maps from other sources which were transmitted by the field party contain sufficient control for their application to the charts. (Par. 28)

None transmitted /

5. Differences between this compilation and contemporary plane table and hydrographic surveys have been examined and rectified in the field before forwarding the compilations to the office and are discussed in the descriptive report.

6. The control and adjustment of the photo plot are discussed in the descriptive report. Unusual or large adjustments are discussed in detail and limits of the area affected are stated. (Par. 12b; 44; and 66 c, h, I)

7. High water line on marshy coast is clear and adequate for chart compilation. (Par. 16a, 43, and 44)

No sand beach in this area.

NOTE: Strike out paragraphs, words or phrases not applicable and modify those requiring it. Paragraph numbers refer to those in the Topographic Manual. Refer also to the pamphlet "Notes on the Compilation of Planimetric Line Maps from Five Lens Air Photographs."
9. The representation of low water lines, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41)

No low water lines are shown as there is little or no tide in the waterways of this area.

9. Recoverable objects have been located and described on Form 524 in accordance with circular 30, 1933, circular letter of March 3, 1933, and circular 31, 1934. (Par. 29, 30, and 57)

Submitted by J. A. Bond 1935

None submitted.

10. A list of landmarks was furnished on Form 567 and instructions in the Director's letter of July 16, 1934, Landmarks for Charts, complied with. (Par. 16d, e; and 60)

To be submitted by J. A. Bond 1935 in a general report.

11. All bridges shown on the compilation are accompanied by a note stating whether fixed or draw, clearance, and width of draw if a draw bridge. Additional information of importance to navigation is given in the descriptive report. (Par. 16c)

12. Geographic names are shown on the overlay tracing. The accepted local usage of new names has been determined and they are listed in the report, together with a general statement as to source of information and a specific statement when advisable. Complete discussion of place names differing from the charts and from the U. S. G. S. Quadrangles is given in the descriptive report, together with reasons for recommendations made. (Par. 64, and 66k)

13. The geographic datum of the compilation is N. A. 1927 and the reference station is correctly noted.

14. Junctions with adjoining compilations have been examined and are in agreement. (Par. 66j)

15. The drafting is satisfactory and particular attention has been given the following:

1. Standard symbols authorized by the Board of Surveys and Maps have been used throughout except as noted in the report.

2. The degrees and minutes of Latitude and Longitude are correctly marked.
3. All station points are exactly marked by fine black dots.

4. Closely spaced lines are drawn sharp and clear for printing.

5. Topographic symbols for similar features are of uniform weight.

6. All drawing has been retouched where partially rubbed off.

7. Buildings are drawn with clear straight lines and square corners where such is the case on the ground.

(Par. 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 48)

16. No additional surveying is recommended at this time.

17. Remarks:

18. Examined and approved;
