NOTES ON COMPILED

One copy of this form must accompany each chart from beginning to completion. The last draftsman, whose name appears on this form, is responsible for it and all personnel will endeavor to keep these forms up to date and correctly posted. This form is very important inasmuch as the final Descriptive Report of the Chart compiled is based upon the information contained herein.

GENERAL LOCATION: East Coast - North Carolina
LOCATION: Neuse River - Adams Creek
DATUM STATION: Carraway 1935, Latitude: $34^\circ 55' - 48.44''$ (1492.6 m.), Longitude: $76^\circ 33' - 29.88''$ (756.8 m.)

(unadjusted)
REPORT OF COMPILATION:

REFERENCE:
In reviewing this compilation special reference should be made to the Special Report for Compilations 5550 to 5566 wherein general topographic features and compilation methods and difficulties for the project as a whole are discussed. **Filed as part of Report T 5550.**

RADIAL LINE PLOT:
The standard radial line plot method was used in compiling this sheet. Failure to recover control points along the south shore of Neuse River to eastward of the line of flight of the photographs made it impossible to establish radial points with any degree of accuracy in the northeast corner of the sheet. The radial plot apparently tended to swing around control points located in the mouth of Adams Creek, and the eastern limit of compilation at the north end of the sheet had to be moved in near the center line of the flight.

Scale differences in some of the prints caused difficulties which were overcome by using the methods previously resorted to in connection with other prints for this project. Print M79 - 82 was so badly distorted that it was entirely omitted from the radial plot.
All control stations on this compilation were held in making the radial plot.
There were no points common to adjacent flights and no adjoining compilations.
The scale factor for this compilation is 1.025.

ADJUSTMENT OF PHOTOGRAPHS:
Radial points were well selected and spaced. In areas where excessive tilt was encountered additional points were established by interlacing. No unusual difficulties in adjustment were encountered.

INTERPRETATION:
The photographs are clear, showing topographic detail well and sharply defined except on extremities of wing prints. The stereoscope was freely used in interpreting detail.
Standard topographic symbols were used to indicate topographic detail, except for cultivated areas, which are clearly outlined on the compilation by intricate systems of drainage ditches easily discernible on the photographs.

COMPARISONS WITH CONTEMPORARY SURVEYS:
There were no adjoining compilations to require checking of junctions.
Hydrographic signals for a hydrographic survey of Adams Creek by the party of J. A. Bond were spotted on the photographs by a field party and then located on this compilation. These signals and also compiled shoreline were then transferred to Hydrographic Sheets, and the sounding lines run were found to check the compiled shoreline.
This compilation was compared with U. S. C. & G. S. Chart #538 and the compiled shoreline detail was found to check the charted in general. Compiled road systems differ from the charted, however, and considerable changes are indicated.
At Lat. 34° 56.3 N and Long. 76° 42.0 W the head waters of a creek which apparently has never been charted show on the compilation.
There were no other charts or topographic sheets available with which to check the compilation further.
REPORT OF COMPILATION (CONTINUED):

ACCURACY AND COMPLETENESS:
The area covered on this compilation is complete in every detail in so far as can be determined from the photographs. The compilation should have a probable error in well defined detail of not more than 10 meters and in less well defined detail of not more than 20 meters.

NAMES:

Names appearing on the overlay sheet for this compilation were taken from U. S. C. & G. S. Chart # 538. Local names in common use were not ascertained and investigated by the field inspection party due to lack of time.

Respectfully submitted:

James C. Tison, Jr.
Aid, Coast & Geodetic Survey.

Approved and forwarded:

S. B. Grennell,
Jr. H. & G. E.,
Chief of Party.

Survey No. 5566
Comparison with Previous Topographic Surveys

**T-1062 (1867), 1:20,000**

Survey T-1062 shows a portion of the Neuse River and all of Adams Creek. No large changes of shoreline have occurred since the time of survey T-1062. The buildings along Back Creek and Isaac Creek have been abandoned. T-1062 is superseded by this compilation over the common area.

**T-3824 (1920), 1:20,000**

Survey T-3824 covers Adams Creek and Oriental Harbor. The piles shown in Adams Creek at 34° 57.2' / 76° 40.7' cannot be seen on the photos and consequently they are not shown on the compilation. Chart letter 98 (1935) verifies their existence, however.

Some of the buildings shown on T-3824 along the shores of Adams Creek have been destroyed or removed. The compilation shows all buildings along these shores.

The U. S. Engineers' and the "C. and G. S. " triangulation stations "A" to "Z" and "Gamma U.S.E." shown on T-3824 all are the positions of 2' iron pipes set in the ground. These stations, established in 1913, have not been recovered by the field inspection parties working in this area. They are not shown on this compilation. T-3824 is superseded by this compilation over the common area.

There are no graphic control surveys which cover this area.

Comparison with New Hydrographic Surveys

**H-5905 (1935), 1:10,000**

There are no conflicts between the soundings of H-5905 and the shoreline of this compilation. The stakes, sunken logs, sunken pile, and the fences shown on H-5905 will not appear on this compilation for they cannot be seen on the photos. For the same reason the wreck at 34° 57.4' / 76° 40.4', the ballast dump and old boiler at 34° 57.1' / 76° 40.6', the piles at 34° 57.2' / 76° 40.7' shown on H-5905 will not appear on this compilation.
Comparison with the Charts

Charts No. 538, 1231, 3253

The report for this compilation does not mention landmarks. From an inspection of the photographs no prominent objects are located in this area.

According to information furnished by the U. S. Lighthouse Service (Chart letter 160, 1936), the numbers but not the positions of lights No. 2, 3, 5, 7, 5, and 7 in Adams Creek have been changed since the positions of these lights were established by triangulation. The new numbers have been reported in the Notice to Mariners, Jan. 1936 but the new numbers are not shown in the Light List for 1936.

The piles shown on these charts at 34° 57.2 and 36° 40.7 have not been located on this compilation. See Chart letter 98 (1936).

Many of the buildings and roads shown on these charts are obsolete. This compilation shows all roads and buildings in this area in existence at the time the photos were taken.

Refer to pages 5 to 8 for a report for compilation T-5550 for a discussion of camera errors in this area and need for more than the usual amount of ground control.

The control of this compilation is adequate in order to support the estimate of accuracy of 10 to 20 meters given on page 2 of the preceding report.

July 9, 1936.

[V. G. Jones]
Chief of Party: S. B. Grenell

Compiled by: J. C. Tyson, Jr.

Project: Party # 18

Instructions dated: Dec. 14, 1934

1. The charts of this area have been examined and topographic information necessary to bring the charts up to date is shown on this compilation. (Par. 16a, b, c, d, e, g and i; 26; and 64)

2. Change in position, or non-existence of wharfs, lights, and other topographic detail of particular importance to navigation which affect the chart, is discussed in the descriptive report. (Par. 26; and 66 g, n)

See data furnished by survey of J.A. Bond, 1935

3. Ground surveys by plane table, sextant, or theodolite have been used to supplement the photographic plot where necessary to obtain complete information, and all such surveys are discussed in the descriptive report. (Par. 65; and 66 d, e)

No graphic control surveys were made in this area.

4. Blue prints and maps from other sources which were transmitted by the field party contain sufficient control for their application to the charts. (Par. 128)

None transmitted.

5. Differences between this compilation and contemporary plane table and hydrographic surveys have been examined and rectified in the field before forwarding the compilations to the office and are discussed in the descriptive report.

6. The control and adjustment of the photo plot are discussed in the descriptive report. Unusual or large adjustments are discussed in detail and limits of the area affected are stated. (Par. 12b; 44; and 66 c, h, i)

7. High water line on marshy and conglomerate coast is clear and adequate for chart compilation. (Par. 16a, 43, and 44)

High water line along sand beach was obtained from the photos. There are no notes on the field photos concerning the position of the line in these sand beach areas.

NOTE: Strike out paragraphs, words or phrases not applicable and modify those requiring it. Paragraph numbers refer to those in the Topographic Manual. Refer also to the pamphlet "Notes on the Compilation of Planimetric Line Maps from Five Lens Air Photographs."
8. The representation of low water lines, reefs, coral reefs, and
reefs, and legends pertaining to them is satisfactory. (Par.
36, 37, 38, 39, 40, 41)

9. Recoverable objects have been located and described on Form 524
in accordance with circular 30, 1933, circular letter of March 3,
1933, and circular 31, 1934. (Par. 59, 50, and 57)
No recoverable objects have been located and described in this area.

10. A list of landmarks was furnished on Form 567 and instructions
in the Director's letter of July 16, 1934, Landmarks for Charts,
complied with. (Par. 16d, e; and 60)
See reports of J.A. Bond, 1935. in the
form of Chart letter, 180 (1936). This give
position for non-floating aids to navigation, only.

11. All bridges shown on the compilation are accompanied by a note
stating whether fixed or draw, clearance, and width of draw if
a draw bridge. Additional information of importance to naviga-
tion is given in the descriptive report. (Par. 16c)
No bridges in this area.

12. Geographic names are shown on the overlay tracing. The accepted
local usage of new names has been determined and they are listed
in the report, together with a general statement as to source of
information and a specific statement when advisable. Complete
discussion of place names differing from the charts and from the
U.S.G.S. Quadrangle is given in the descriptive report,
together with reasons for recommendations made. (Par. 54, and 66k)

13. The geographic datum of the compilation is N.A. 1927 and the
reference station is correctly noted.

14. Junctions with adjoining compilations have been examined and are
in agreement. (Par. 66j)
None

15. The drafting is satisfactory and particular attention has been
given the following:

1. Standard symbols authorized by the Board of
Surveys and Maps have been used throughout
except as noted in the report.

2. The degrees and minutes of Latitude and Longi-
tude are correctly marked.
3. All station points are exactly marked by fine black dots.

4. Closely spaced lines are drawn sharp and clear for printing.

5. Topographic symbols for similar features are of uniform weight.

6. All drawing has been retouched where partially rubbed off.

7. Buildings are drawn with clear straight lines and square corners where such is the case on the ground.

(Par. 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 48)

16. No additional surveying is recommended at this time.

17. Remarks:

18. Examined and approved; February 27, 1936
