The Topographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.

Field No. T - 5714

REGISTER NO.

State Maryland

General locality Chesapeake Bay

Locality Peachblossom, Trippe, Goldsborough & Island Creeks.

Scale 1:10,000 Photographs 5-1-37 Many Single Lens

Date of 3-12-37 at numerous dates.

Air Photographic Party No. 2

Chief of party L. W. Swanson

Surveyed by Field Inspection by D. A. J., J. W., J. L. W., J. C. L., Fall

Inked by Shoreline and Interior W. A. Rasure (Rough Draft)

Heights in feet above to ground to tops of trees

Contour, Approximate contour, Form line interval feet

Instructions dated May 13, 1938.

SUPPLEMENTAL SURVEYS

Graphic control surveys: None.

Hydrographic surveys: None.

Name Investigation: J. N. Jones... March—1940.

GENERAL INFORMATION

Chief of Party: L. W. Swanson.

Projection by: Washington Office, Rule No. 1, 1941.

Control Plotted by: L. W. Swanson, Aug. 1941.

Control Checked by: W. A. Rasure, Aug. 1941.

Radial Points Plotted by: J. E. Deal, June 1941.

Shoreline inked by: W. A. Rasure, Sept. 1941.

Scale: 1:10,000. The Details on T-5714 are of the date of the photographs, except for the relocation of the highway mentioned on page 3 of this report.

STATISTICS

Area land (more than 200 meters from opp. shore) 16.3 sq. stat. miles.

Shoreline (less " " " " " " " " ) 23.7 sq. miles.

Roads, streams, and trails 148.0 sq. miles.

Railroad 5.6 sq. miles.

Time for detailing shoreline 17 days.

Time for detailing interior 30 days.

REFERENCE STATION

All. 1910 (corrected) Datum North American 1927

Latitude: 38° 42' 41.5" N (565.4m) Unadjusted

Longitude: 76° 06' 41.5" W (446.1m)

Maryland system of plane coordinates: X = 1,054,047.57 ft.

X = 321,072.77 ft.
DESCRIPTIVE REPORT

to accompany

AIR PHOTOGRAPHIC SURVEY SHEET No. T - 5714

STATE OF MARYLAND

CHESAPEAKE BAY - PEACHBLOSSOM CREEK - TRIPPE CREEK
GOLDSBOROUGH & ISLAND CREEK

Date of this report ................................ November 17, 1941.

INSTRUCTIONS:

This rough draft map drawing is a part of project No. HT-215
dated May 13, 1938 and supplemental instructions dated or contained

CONTROL:

The control with in the limits of detail on this sheet:

M. S. F. S.

Bless, 1910
Blos, 1910
May, 1910
Toe, 1910
Higher, 1910
All, 1910
Deux, 1910
Wall, 1910

Stations shown on this sheet, off the outer limits of detail
are as follows;

U. S. C. & G. S.

Sal, 1934 (F.I.S. Iam.) both off these stations being
pricked from Sheet No. T-5713.

M. S. F. S.

Golds, 1910
R.M. Plain, 1910
Spin, 1910
Neve, 1910
Ayes, 1909
Robertson, 1910
Camden, 1910
Stab, 1910
Gash, 1910

RADIAL PLOT:

A detailed report of this radial plot of this sheet
along with those of the Choptank river is being prepared and will
be submitted in the near future with one of the other sheets.
The basic plot was made from nine lens photographs
on a 1:20,000 scale and enlarged to a 1:10,000 scale.

T-5713, T-5714, T-5810, T-5817 radial plotted on unit.
PHOTOGRAPHS: This sheet was not covered by a sufficient number of nine lens photographs to make a complete survey. The single lens photographs listed below were taken on a 1:20,000 scale and enlarged to a 1:10,000 scale, were purchased from AAA and were used in detailing this sheet.

AHY 28-75 to 28-79 Inclusive.
AHY 63-47 to 63-49 Inclusive.
AHY 75-93 to 75-94 Inclusive.

A dog ear was placed on the NW corner of sheet to include Photo. 1349.

DETAILING:

A relocation of Highway U.S. 213 starting at the bridge in the upper reaches of Peachblossom Creek and proceeding South Easterly to the Junction with sheet T-5717. This location was made on field prints in the field by means of measured distances from points identifiable on the photographs and measured along identified lateral lines to the center line of this new highway. These distances will be found on field prints, 1646 and 1647.

The interior detailing of this sheet was for the most part accomplished with nine lens photo. However a strip from North to South and about the center of the sheet was detailed in part from single lens photographs.

Considerable difficulty was encountered in the detailing of the South East side of this sheet due to tilt, some distortion and scale difference.

The drainage on this sheet was examined under the stereoscope where there was any doubt as to its position.

Two highways appear on this sheet as noted on the over lay sheet. U.S. Highway 213 and Maryland State Highway 333.

Two Highway bridges and one Rail Road bridge are shown on this sheet with proper notations shown on the overlay sheet. All three are fixed bridges.

All roads are 6 meters in width unless labeled otherwise.
All trails are shown x-----x-----x-----x-----
Ditches are labeled.
Practically all intersections are shown.
The two highways are drawn in with a double full line.
The wooded area is not all shown in complete detail.
The use of the projector was very helpful in detailing this sheet.

FIELD INSPECTION:

The sheet was detailed according to the field inspection everywhere that it appeared.
Field inspection by D.A. Jones and J. N. Jones, Fall 1939 and J. C. Lajoye fall 1941.
Field inspection of relocation Highway U.S. 213 was done by L. W. Swanson and J. C. Lajoye, September 1941.

RECOVERABLE HYDROGRAPHIC SIGNALS:

None put on this sheet.

RECOVERABLE TOPOGRAPHIC STATIONS:

No Recoverable topographic stations appear on this sheet.

LANDMARKS FOR CHARTS:

No landmarks appear on this sheet.
GEOGRAPHIC NAMES:  

Geographic names shown on this sheet are listed on form M234 in the appendix. Field inspection of names by Lieut. J. N. Jones.

JUNCTIONS:  

A good junction was made with sheets T-5713 on the North, T-5712 on the West, and T-5717 on the South. No junction could be made with T-5610 on the East as the detailing has not been started. Junction with T-5619 compared in office, minor corrections were made at several places, mostly in streams through woodlands.

COMPARISON WITH PREVIOUS CHARTS AND SURVEYS:

Chart:---- 1225
Due to the difference in scale and the fact that very little interior detail is shown on this chart very little comparison can be made, but the general trend of the shoreline and the interior detail seems to be in agreement.

Chart:----- 77
The scale of this chart makes it very hard to compare this this survey, but it can be noted that the general trend of the shoreline is the same.

T-2513;
Interior detail common to both surveys compare exceptionally well. Peachblossom Creek compares well except at the head waters, 76° - 04.8' 35° - 44' where there is a displacement of approximately 8 mm. The upper reaches of most of the sloughs have changed considerably, or were probably sketched in on T-2513. Trippe Creek and Goldsborough Creek compare favorably well disregarding the interior detail and the projection. Holding to the interior detail and the projection they both seem to be displaced, except in the upper reaches of Goldsborough Creek which compares good. The displacement being uneven in azimuth and distance on Trippe Creek but in no place over 10 mm. Goldsborough Creek being displaced to the North and average of approximately 6 mm.

T-264;
This survey only covers a small portion of T-5714 but that part compares favorably well.

T-2494;
This survey compares favorably well. There is very little detail to compare between these two surveys.

RECOMMENDATION FOR FUTURE SURVEYS:

The detail on this sheet is believed to be complete in all importance for charting and no additional surveys should be made.

The probable error of radial points and well defined objects along the shoreline is not greater than 0.5 mm. The error of the interior detail of importance on this sheet is probably not greater than 1 mm. where our radial points have been determined by three or more photos.

Respectfully submitted,

W. A. Raske
Photogrammetric Aid (field)

Forward Approved
Lieut. L. W. Swanson, Chief of Party
Date: Nov 25, 1940

1. W.H. Nevius, Trappe
2. Wm. Kastenhuber, Easton
3. W.F. Moore, Oxford
4. W.L. Anderson, Easton
Chief of Party: F. W. Swanson

Compiled by: W. A. Rasure

Project: H. T. 215

Instructions dated: May 13, 1938,
3-31-38; 4-1-38; 6-19-38, and 8-28-39.

1. The charts of this area have been examined and topographic
information necessary to bring the charts up to date is shown
on this compilation. (Par. 16a, b, c, d, e, g and h; 63; and 64)

Change in position, or non-existence of wharfs, lights, and
other topographic detail of particular importance to naviga-
tion which affect the chart, is discussed in the descriptive
report. (Par. 26; and 66 g, n)

3. Ground surveys by plane table, sextant, or theodolite have been
used to supplement the photographic plot where necessary to
obtain complete information, and all such surveys are discussed
in the descriptive report. (Par. 65; and 66 f, e)

New highway No. 213 has been added by field inspection, see photos,
1646 and 1647.

Blue-prints and maps from other sources which were transmitted
by the field party contain sufficient control for their applica-
tion to the charts. (Par. 28)
None are submitted with this map drawing.

Differences between this compilation and contemporary plane
and hydrographic surveys have been examined and rectified
in the field before forwarding the compilations to the office
and are discussed in the descriptive report.

There are no contemporary surveys.

6. The control and adjustment of the photo plot are discussed in the
descriptive report. Unusual or large adjustments are discussed
in detail and limits of the area affected are stated. (Par.
18b; 44; and 66 c, h, i)

A detailed report of the photo plot is being prepared and will be
forwarded in the near future. This report will cover the upper
channel and vicinity.

7. High water line on marshy and mangrove coast is clear and ade-
quate for chart compilation. (Par. 16a, 43, and 44)

NOTE: Strike out paragraphs, words or phrases not applicable and
modify those requiring it. Paragraph numbers refer to those in the
Topographic Manual. Refer also to the pamphlet "Notes on the Compli-
ation of Planimetric Line Maps from Five Lens Air Photographs."
The representation of low water lines, reefs, coral reefs and rocks, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41)

Recoverable objects have been located and described on Form 524 in accordance with circular 30, 1933, circular letter of March 3, 1933, and circular 31, 1934. (Par. 29, 30, and 57) Form 524 is not submitted with this Map Drawing.

A list of landmarks was furnished on Form 587 and instructions in the Director's letter of July 15, 1934, Landmarks for Charts, complied with. (Par. 16d, e; and 60)

No landmarks are recommended for charting on this Map Drawing.

11. All bridges shown on the compilation are accompanied by a note stating whether fixed or draw, clearance, and width of draw if a draw bridge. Additional information of importance to navigation is given in the descriptive report. (Par. 16c)

Three fixed bridges appear on this Map Drawing. Notes as to their clearances appear on the overlay sheet.

12. Geographic names are shown on the overlay tracing. The accepted local usage of new names has been determined and they are listed in the report, together with a general statement as to source of information and a specific statement when advisable. Complete discussion of place names differing from the charts and from the U. S. C. S. Quadrangles is given in the descriptive report, together with reasons for recommendations made. (Par. 64, and 66)

13. The geographic datum of the compilation is N.A. 1927 and the reference station is correctly noted. The reference station is a Maryland Sheel Fish Survey Station (Al1, 1910) The datum correction has been applied.

14. Junctions with adjoining compilations have been examined and are in agreement. (Par. 66)

15. The drafting is satisfactory and particular attention has been given the following:

1. Standard symbols authorized by the Board of Surveys and Maps have been used throughout except as noted in the report.

2. The degrees and minutes of Latitude and Longitude are correctly marked.
3. All station points are exactly marked by fine black dots.

4. Closely spaced lines are drawn sharp and clear for printing.

5. Topographic symbols for similar features are of uniform weight.

6. All drawing has been retouched where partially rubbed off.

7. Buildings are drawn with clear straight lines and square corners where such is the case on the ground.

(Par. 34, 35, 36, 37, 38, 40, 42, 43, 44, 45, 46, 47)

16. No additional surveying is recommended at this time.

17. Remarks:

It should be noted that a shoal line is shown on this Map Drawing, this is not low water, but is shown to aid the hydrographer and not a part of the Topography.

18. Examined and approved;

REVIEW OF PLANI METRIC MAP T-5714

There are no contemporary graphic control or hydrographic surveys in this area.

Previous Topographic Surveys:

<table>
<thead>
<tr>
<th>Survey</th>
<th>Scale 1:20,000</th>
<th>Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>T-224</td>
<td>1:20,000</td>
<td>1847</td>
</tr>
<tr>
<td>T-225</td>
<td>1:20,000</td>
<td>1847</td>
</tr>
<tr>
<td>T-254</td>
<td>1:20,000</td>
<td>1848</td>
</tr>
<tr>
<td>T-2494</td>
<td>1:20,000</td>
<td>1900</td>
</tr>
<tr>
<td>T-2513</td>
<td>1:20,000</td>
<td>1900</td>
</tr>
</tbody>
</table>

T-5714 supersedes the previous surveys for charting purposes. There are many instances of shoreline displacements up to 100 meters between T-5714 and the above surveys, apparently due to sketching on the earlier surveys. There is little evidence of any great change due to erosion or accretion.

Comparison with Nautical Charts:

<table>
<thead>
<tr>
<th>Chart</th>
<th>Scale 1:200,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>77</td>
<td>1:200,000</td>
</tr>
<tr>
<td>1225</td>
<td>1:80,000</td>
</tr>
</tbody>
</table>

T-5714 has not been applied to the charts as of September 4, 1942. Due to sketching on the earlier surveys, planimetric differences in shoreline are shown on T-5714 which should be shown on Chart 1225, and the interior detail should also be brought up-to-date.

Field Inspection and Detailing:

The field inspection was very good and complete, except for location of streams through woodlands. The detailer did not follow the field inspection notes closely enough, necessitating addition of about twenty buildings, and a few shoreline changes in the Washington Office. Symbolizing was good, except for grass and brush. Several streams through woodland were removed in the office and others relocated after inspection of photographs under the stereoscope.
Radial Plot:

No exhaustive check of the plot was attempted, but the photographs were oriented under the acetate and a few cuts made which checked with the detail.

Reviewed by D. H. Benson, Sept. 4, 1942

Review report prepared by B. G. Jones, July 1946, from reviewer's notes.

T-5714 was compiled in 1941 and reviewed in 1942, but processing in the Washington Office was not completed until July 1946 because of war map work of the Bureau. Meanwhile, the Coast and Geodetic Survey produced topographic quadrangles (manuscript scale 1:20,000) for the War Department of this same area. Planimetric details from T-5714 were used as a base in preparing quadrangles T-8249 and T-8250, which were completed in 1943. These quadrangles are more recent and more complete as regards map details than T-5714, but are at a smaller scale.
