Remarks:
Summary to Accompany T-5978 and T-5979

Shoreline maps T-5978 and T-5979 are two of six similar maps in project Ph-51(49) and are the two centrally located maps in the project. Project Ph-51(49) extends along the Kennebec River, Maine, from a junction with project CS-272 at latitude 44° 00' upstream to a point approximately two miles north of Augusta at latitude 44° 23'. This is a multiplex project, in advance of hydrographic surveys to be made at a later date. The field operations preceding compilation included recovery and identification of horizontal control, shoreline inspection, inshore inspection, location of aids to navigation, selection and location of landmarks and geographic names investigation. The multiplex compilation was at a scale of 1:10,000 and the manuscripts were used as multiplex sheets.

Data pertaining to T-5978 and T-5979 will be filed as follows:

(a) Filed in the Division of Photogrammetry

1. Two map manuscripts, T-5978 and T-5979, scale 1:10,000

2. Form 524 (6)

(b) Filed in the Coast and Geodetic Survey Archives

1. Combined descriptive Report for T-5978 and T-5979

2. A cloth-backed lithographic print of T-5978 and T-5979.
FIELD INSPECTION REPORT
SHORELINE SHEETS 5978, 5979
PROJECT Ph-51(49)

E. R. McCarthy, Chief of Party

All phases of the field work were done in accordance with The Director's Instruction, Project Ph-51(49), Field dated 7 July 1949.

The field work on these sheets was performed by the following personnel on the dates indicated:

1. Description of the Area

The area surveyed includes the Kennebec River from the "Bluff" on the south, to "Brown's Island" on the north and the land area immediately adjacent. This particular area is located in the counties of Sagadahoc, Lincoln and Kennebec.

The principal cultural features within the limits of the survey includes the towns of Gardiner, Randolph and South Gardiner Maine. The principal occupation of the inhabitants of the area is farming. There is however, some manufacturing conducted in the vicinity of Gardiner.

Access to the area is available by highway, the Maine Central Railroad and Private Yachts.

2. Completeness of Field Inspection

It is felt that field inspection has been adequately covered on the photographs.
3. Interpretation of the Photographs

See Report on Shoreline Sheets (5976 & 5977).

4. Horizontal Control

The horizontal control within the limits of the sheets consisted of that established by the U. S. Coast & Geodetic Survey, U. S. Engineer Department and U. S. Geological Survey. A thorough search was made for all U. S. Coast & Geodetic Survey stations and approximately 67 percent recovered. A total of seven (7) U. S. C. & G. S., four (4) U. S. E. D. and one (1) U. S. G. S. triangulation stations were recovered and identified on photographs for photogrammetric control purposes.

Horizontal Control (Cont'd)

To facilitate a "tie" between the U. S. Engineers scheme of triangulation and that of the U. S. Coast and Geodetic Survey in the area, observations for a point and azimuth connection were made. This information will be submitted to the Division of Geodesy for any adjustments necessary.

5. Vertical Control

Three (3) Tidal Bench Marks, Maine- 68 (U. S. Coast and Geodetic Survey), located in the town of Gardiner Maine, were recovered and identified according to Project Instructions.

6. Contours and Drainage

Not applicable.

7. Mean High Water Line

See Report on Shoreline Sheets (5976 & 5977).

8. Low Water Line

See Report on Shoreline Sheets (5976 & 5977).

9. Wharves and Shoreline Structures

See Report on Shoreline Sheets (5976 & 5977).

10. Details Off-Shore from Mean High Water Line

Off-Shore detail discernible on the photographs has been labeled appropriately. In some areas, due to the number and extent of obstructions, the limits of an entire area are shown and marked as being foul. Two, Three-Point Fixes were taken on boulders and the information submitted.

11. Landmarks and Aids to Navigation

There were no landmarks or fixed aids to navigation within the limits of these sheets. Three new landmarks were established and forms 524 and 567 were submitted.

The Maine Central Railroad is very close and generally parallel to the river. Railroad semaphores were identified on the photographs and may serve as secondary landmarks.
12. **Hydrographic Control**
   
   Not applicable.

13. **Landing Fields and Aeronautical Aids**

   There are no landing fields or aeronautical aids in this area.

14. **Roads**

   The roads and trails were classified in accordance with Photogrammetry Instructions No. 10, dated 14 April 1947, and the Amendment to the above dated 24 October 1947.

15. **Bridges**

   All bridge information for the area covered by this report as listed in the U. S. Engineer's "List of Bridges over Navigable Waters in the U. S." dated July 1, 1941 was verified in the field, all clearances were carefully measured with a steel tape, and the published descriptions and clearances were found to be correct. In addition supplementary information is noted on the photographs relative to the clearances of secondary bridges not listed in the bridge book.

16. **Buildings & Structures**

   See Report on Shoreline Sheets (5976 & 5977).

17. **Boundary Monuments and Lines**

   There were no boundary monuments or lines investigated within the limits of the sheets.

18. **Geographic Names**

   In accordance with the Project Instructions, a systematic investigation of Geographic Names was not made, however names that were questionable have been investigated. See .
Geographic Names (Cont'd)

Attention is called to the names of "Poll Lews" and "Gould Brooks" as given on Chart No. 289. Local information revealed that said names are no longer used. They are now known merely as "The Brook". Refer to attached list of approved names. (item 48)

PHOTOGRAMMETRIC PLOT REPORT

21. AREA COVERED

T-5978 and T-5979.

22. METHOD

General methods were identical with those used for T-5976 and T-5977.

Two strips were set, one each for T-5978 and T-5979, as follows:

A five-model strip (49-O-717 to 722) was run from SUB.PT. LAPHAM, 1868, SUB. PT. DUMFRY, 1868, and TT81-HQ,1940(USGS) in model 717-718 to SUB. PT. MESERVE, 1868, in model 721-722. Intermediate stations were SUB. PT.TELEGRAPH HILL, 1868, and ADKINS BARN, SOUTH GABLE,1868. All stations were held. USE stations BOOBY, 1937, BEACON, 1937, and NITE, 1937 also held in this strip, the latter two being in the end model with MESERVE, south of TELEGRAPH HILL.

To complete the detailing in T-5979 a short three-model strip was set. Model 717-718 was reset and extended to 49-O-715. This strip ended on two control points, SUB. PT. WORK, 1937 (USE) and FORM’ 1937 (USE). The center model contained two control points, GARDINERS METH. SPIRE, 1868, and GARDINERS EPISCOPAL SPIRE, 1868. All control was held.

23. ADEQUACY OF CONTROL

Horizontal control as provided by the field inspection party complied adequately with the project instructions.

24. SUPPLEMENTAL DATA

Inapplicable.

25. PHOTOGRAPHY

See Photogrammetric Plot Report for T-5976 and T-5977.

26. RECOMMENDATIONS

See Photogrammetric Plot Report for T-5976 and T-5977.

27. ACCURACY

It is believed that all well-defined points are within 0.5mm of their correct geographic position.

Approved and forwarded

Respectfully submitted

DATE: 1-50
COMPILATION REPORT
Ph-51(42)

T-5978 and T-5979

31. DELINEATION ) Refer to Photogrammetric plot report.

32. CONTROL )

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

Drainage adjacent to shoreline was shown.

35. SHORELINE AND ALONGSHORE DETAILS

Shoreline inspection was adequate. All low-water lines shown are approximate. They are based on data furnished by the field inspection party.

36. OFFSHORE DETAILS

Offshore details are believed to be complete.

37. LANDMARKS AND AIDS

Forms 567 were submitted for manuscripts T-5978 and T-5979 and forwarded to the Washington Office with this report. Copies attached.
38. CONTROL FOR FUTURE SURVEYS

Three U.S. triangulation stations are below Telegraph Hill, 1868; two of these stations were identified and held with the other control. These stations have been reported as recoverable topographic stations in accordance with instructions dated 6 December 1949 for Project Ph-5L (49), paragraph 6 and their geographic positions noted on Forms 524.

Five recoverable topographic stations are within the limits of T-5978 and T-5979.

Five Forms 524 are being forwarded with this report. The positions for all the recoverable topographic stations, except Beacon, 1937 and Nite 1937 were determined by steroscopic methods. They are:

T-5978 Beacon, 1937 (USE)
" Nite, 1937 (USE)
T-5979 White Stack, 1949
T-5978 Gable, South, 1949
" Red Stack, 1949
" L-37, 1937 (USE)

39. JUNCTIONS

Junction was made between T-5979 and T-5980 to the north, and between T-5978 and T-5977 to the south. A junction was also made between the two manuscripts covered in this report. There are no contemporary surveys to the east or west.

40. HORIZONTAL AND VERTICAL ACCURACY

Horizontal Control

Refer to Photogrammetric Plot Report item 23.

46. COMPARISON WITH EXISTING MAPS

Comparison was made between the manuscript and U.S. Geological Survey quadrangle Gardner, scale 1:62,500, edition of 1943, reprinted in 1947, and Wiscasset, scale 1:62,500, edition of 1944, reprinted in 1949. All roads within two miles of the river were visually compared with the Geological Survey quadrangles for new construction and alignment. They were in good agreement, except for the reconnections of Route 27, approximately 2.2 miles south of Randolph. This has been shown from information furnished by the field inspection party on photograph 49-O-719.

47. COMPARISON WITH NAUTICAL CHARTS

Visual comparison was made between the manuscripts, and Chart 288, scale 1:15,000, published May 1943 (3rd edition), corrected 26 September 1949.

Items to be applied to nautical charts immediately:

Delete K.C.Railroad in the vicinity of Randolph.
Revise chart for reconstruction of Route 27.
47. **COMPARISON WITH NAUTICAL CHARTS**
(continued)

Items to be carried forward:

None.

REVIEW REPORT
Shoreline Maps T-5978 and T-5979
22 January 1951

62. Comparison with Registered Topographic Surveys

T-1158  1:10,000  1870-90
T-1996  1:10,000  1890-91

These maps were prepared by T-5978 and T-5979 for nautical charting purposes.

63. Comparison with Maps of Other Agencies

Gardiner, Maine, U.S.G.S. quadrangle, 1:62,500, 1941

64. Comparison with Contemporary Hydrographic Surveys

None

65. Comparison with Nautical Charts

Chart 289, 1:15,000, ed. 1943, corr. 9/26/46

A cable area on T-5978 at the extreme north edge of the sheet is (not) shown on the chart.

An island east of The Sands Island and several small islands north of The Sands Island shown on T-5978 are not shown on the chart.

A rock that bares 2 feet at MLW shown on T-5979 at latitude 44° 13' 37.5" and longitude 69° 46' 05" is not shown on the chart. This rock is located on the west edge of the channel and is not necessarily a hazard to navigation.

Hand correction on chart and notice to mariners No. 27 (1953) 4/1/53

66. Adequacy of Results and Future Surveys

These maps are adequate as a base for hydrographic surveys and the construction of nautical charts. They meet the National Standards of Map Accuracy.

67. Control

Triangulation station Pittston Spire, 1868 was deleted from the map. The 1949 recovery for this station reported the spire gone.
