Tide from (III): Portland, Maine with time correction to Herman Harbor, Sheepscot River, Maine

Mean Range: 8.5', Spring Range: 9.7'

Camera: (Kind or source) U. S. Coast & Geodetic Survey, nine lens camera (focal length 8")'. All negatives are on file in the Washington Office.

Field Inspection by: Lieut. Henry O. Fortin, date: Fall, 1942

Field Edit by: None, date:

Date of Mean High-Water Line Location (III): October 20, 1941

Projection and Grids ruled by (III)" D.H., date: Feb. 12, 1943

" " " checked by: John C. O'Neill, date: Feb. 13, 1943

Control plotted by: Ruth W. Whitson, date: Feb. 16, 17, 1943

Control checked by: Walter E. Schmidt, date: Feb. 18, 1943

Radial Plot by: Walter E. Schmidt, date: Feb. 1943

Detailed by: Ruth W. Whitson (Shoreline Rough-Draft), date: Feb. to June 1943

Reviewed in compilation office by: James E. Sunderland, dates: April to June 1943

Elevations on Field Edit Sheet checked by: None, date:
STATISTICS (III)

Land Area (Sq. Statute Miles): 0.5

Shoreline (More than 200 meters to opposite shore): 21 statute miles

Shoreline (Less than 200 meters to opposite shore): 7.5 statute miles

Number of Recoverable Topographic Stations established: 7

Number of Temporary Hydrographic Stations located by radial plot: 65

Leveling (to control contours) - miles: none

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Remarks:
CONTROL:

The control plotted and control transferred from adjoining map drawings consists of twenty-five (25) U. S. Coast and Geodetic Survey Triangulation Stations and one (1) U. S. Engineers Triangulation Station. They have been shown with the usual triangulation symbol.

The following six (6) U. S. Coast and Geodetic Survey Triangulation Stations fall within the detailed limits of this map drawing:

* SQUIRREL ISLAND, SOUTHWEST AND, BEACON, 1934, r. 1942.
* SQUIRREL ISLAND, CUPOILA, POLE, 1902, (recovery) 1942
  incorrect.
* CAPE NEWAGEN WATER TANK, 1934, r. 1942.
* THE CUCKOIDS LIGHT HOUSE, 1909, 1934, r. 1942.
* CUCKOIDS FOG SIGNAL, 1902, r. 1942.
* GRIFFITHS HEAD, 1857, 1934, r. 1942.

The following Triangulation Stations fall just outside the detailed limits of this map drawing:

Nineteen (19) U. S. Coast and Geodetic Survey Triangulation Stations;

* PARKERS ISLAND, GENERAL BERRY'S HOUSE CHIMNEY, 1856, Partial recovery 1942.
* PARKERS ISLAND, WIDOW P. OLIVER'S HOUSE, 1856, r. 1942 doubtful.
* RED CHIMNEY, 1856, r. 1942.
* HEBE EDDY, CHIMNEY AT CENTER OF BROWN HOUSE, 1933, r. 1942.
* SOUTHPORT LEDGE, 1857, 1933, r. 1942.
* THE SISTERS BEACON, 1933, 1934, r. 1942. (in extended limits).
** HENDRICKS HEAD LIGHT, OLD TOWER, 1934, r. 1942.
** PARKERS ISLAND, 1855, r. 1942.
** SOUTHPORT ISLAND, NORTH END, STANDPIPE, 1934, r. 1942.
** BURNT ISLAND LIGHT HOUSE, 1902, r. 1942.
** LINEKIN NECK, RED CHIMNEY, 1857, (recovery) 1942
  incorrect.
** WIN, 1909, (recovery) 1942 incorrect.
** RAM ISLAND LIGHT HOUSE, 1902, 1934, r. 1942.
** THE HYPOCRITES BEACON, 1934, r. 1942.
** JACK ROCK BEACON, 1904, 1933, r. 1942.
** DAMISCOVE COAST GUARD, EAST LOOKOUT TOWER, 1934, r. 1942.
** DAMISCOVE 2, 1902, 1933, r. 1942.
** DAMISCOVE COAST GUARD, WEST LOOKOUT TOWER, 1934, r. 1942.
** DAMISCOVE LOOKOUT, 1902.

One (1) U. S. Engineers Triangulation Station;

* STAGE, r. 1942.

* Stations were plotted and have been shown with black acid ink triangles.
Station shown on this map drawing with a dashed black acid ink triangle. (N.B.) Refer to report on radial plots, for the area represented on Map Drawings No. T-5985 to T-5994 inclusive, submitted as the appendix to the compiler's report on Map Drawing No. T-5986.

** Stations have been transferred from adjoining map drawings and are shown with red acid ink triangles.

27 **RADIAL PLOT:**

(N.B.) A special report of the radial plots for map drawings numbers T-5985 to T-5994 inclusive, which includes this map drawing, has been submitted as the appendix to the compiler's report for map drawing number T-5986.

Filed in Div. of Photogrammetry - General Files

28 **DETAILING:**

The shore line and immediate adjacent culture have been detailed on this map drawing in accordance with the Director's letters, dated January 12, 1942, and April 1, 1942, pertaining to this Project CS 272-B. Filed in Div. of Photogrammetry - Office Files.

All detail on this map drawing has been shown by the standard symbols as recommended by the Washington Office, and notes fully describing any deviation therefrom have been made on the overlay sheet, in order that the planimetry may be clearly interpreted by those concerned.

The limits of this map drawing were extended by attaching a small piece of celluloid so as to include Latitude 43° 44' 00" to Latitude 43° 45' 00" and Longitude 69° 43' 00" to Longitude 69° 44' 00". This was done so that the rocky islets known as The Sisters could be detailed. This area is not included on any other map drawing. Sun spots on the photographs made it difficult to identify objects as minor detail points on The Sisters on more than one photograph. Therefore, tangents were drawn from available photographs and were used to detail the above mentioned area. The location of these islets is considered relatively weak by this compilation office, and it is recommended that a check be made by plane table survey.

The image on the map drawing at approx. Lat. 43°45'20" and Long. 69°44'15.3" was also very difficult to see on the photographs. Location by the cut in the photograph was doubtful, and an appreciable scale difference between the photographs and this map drawing was observed.

The field inspection party did not submit any data for either the identification of bluffs or the classification of roads along or adjacent to the shore line. The bluffs were detailed according to stereoscopic examination of the office photographs. Since the character of the bluffs, whether rock or soil, could not be ascertained satisfactorily by this examination, the rock bluff symbol was used only when the compiler was certain that it applied; otherwise the dirt bluff symbol was used. All roads shown have been classified by this office. (Some road classifications were changed to agree with the 1944 edition of the Boshbay Quadrangle)
30 MEAN HIGH-WATER LINE:

The mean high-water line (firm ground) has been shown by a solid heavy-weight black acid ink line, the center of which should be taken as the true position.

31 LOW-WATER AND SHOAL LINES:

The approximate limits of shoal areas have been shown by a dashed light-weight black acid ink line. As all photographs covering this map drawing were taken approximately at the time of mean high-water, the limits of rock ledge could not be identified. Therefore, they were detailed in accordance with the field inspection data and have been shown with a dashed light-weight black acid ink line.

Notes have been made on the overlay sheet to assist in identifying the above mentioned areas. These limits are for use of the hydrographer only. They should not be accepted by any mapping agency as indicating the true position of the Mean Low-Water Line.

Shoal and reef limits, deleted from Map Drawing as Hydrographic Surveys Nos. 6054, 6839, 6840, 6844, and 6858, supersede these approx. limits.

32 DETAILS OFFSHORE FROM HIGH-WATER LINE:

Rocks, fish-traps, old piling areas, etc., have been shown in accordance with the field inspection data. The extent to which rocks bare at Mean High-Water or Mean Low-Water has been shown by notes on the overlay sheet. Transferred to map manuscript by reviewer.

The approximate limits of several reefs which were shown by the field inspection party on high-water photographs, have been detailed directly from the field inspection photographs and are shown by a light-weight dashed black acid ink line. Where reefs could be ascertained on the high-water photographs, the limits were shown by a light-weight solid acid ink line. Notes have been made on the overlay sheet to clarify these areas.

33 WHARVES AND SHORE LINE STRUCTURES:

Piers, docks, a marine railway, etc., were detailed on this map drawing in accordance with the field inspection data.

34 LANDMARKS AND AIDS TO NAVIGATION:

The following Landmarks and Aids to Navigation have been shown on this map drawing and their geographic positions submitted on Form No. 567:

+ HOUSE, WHITE. (shown on Form #567 and chart section 314-3 attached to Chart Letter 70916)
+ FLAGPOLE, prominent white, in front of log lodge on east side of Southport Island, due West of South end of Squirrel Island.
* THE CUCKOIDS LIGHT HOUSE (A)
* THE SISTERS BEACON (B)
+ COLONIAL HOUSE (shown on Form #567 and chart section 314-3) attached to Chart Letter 709 (1944)
+ Landmark shown with a 2½ mm. black acid ink circle.
* Aids to Navigation shown with black acid ink triangles.

CHART LETTER 909 (1944)
HYDROGRAPHIC CONTROL:

The positions of seven (7) recoverable topographic stations and sixty-five (65) temporary hydrographic stations have been established on this map drawing by radial intersection and shown with 2½ mm. and 1½ mm. black acid ink circles respectively. The numbers and descriptions of the recoverable topographic stations and fifty-nine (59) of the temporary hydrographic stations have been noted on the overlay sheet. These fifty-nine (59) stations were selected by the Field Inspection Party. Six (6) of the temporary hydrographic stations were selected by stereoscopic examination in this compilation office, and can be identified by the notation "See Note A" on the overlay sheet in conjunction with their descriptions. The descriptions and the geographic positions of the following seven (7) recoverable topographic stations have been submitted on Form No. 524: Numbers 32, 260, 277, 284, 324, 486, 1228.

JUNCTIONS:

Map Drawing No. T-5972, West side, junction in agreement.
Map Drawing No. T-5988, North side, junction in agreement.
Map Drawing No. T-5990, East side, no junction, water area.
No contemporary survey to the south.

The detailed limits of this map drawing have been extended to Latitude 45° 44' between Longitude 69° 43' to 69° 44', and have been shown on a small piece of celluloid attached to the map drawing.

RECOMMENDATIONS FOR FUTURE SURVEYS:

This map drawing is believed to be complete in all details of importance for charting and no additional surveys are recommended except as mentioned in paragraph 28. It is believed that the probable error in the positions of radial points and well-defined objects along the shore line, is not greater than 0.5 mm.

The error in the positions of inland radial points and details of importance probably does not exceed 1.0 mm.

It is recommended that the review section of the Washington Office refer to the report on the radial plots, (appendix of compiler's report for map drawing No. T-5986), concerning the area of which this map drawing is a part, for a more detailed discussion of the factors determining the probable accuracy.

BRIDGES OVER NAVIGABLE WATERS:

All necessary data pertaining to a bridge have been shown by notes on the overlay sheet.

COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES:

Boothbay Quadrangle, U. S. G. S.; scale 1:62,500;
COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES: (CONT'D.)

Due to difference in scale between this map drawing and the above mentioned quadrangle, small planimetric details could not be readily compared. In general, however, planimetric detail common to both is in fair agreement.

COMPARISON WITH NAUTICAL CHARTS:

** Chart 314, scale 1:40,000 – date April 1942
** Chart 1204, scale 1:80,000 – date March 1942

Due to difference in scale between this map drawing and the above mentioned charts, small planimetric details could not be readily compared. In general, however, planimetric detail common to both is in fair agreement.

Boothbay Quadrangle, U.S.G.S. (15' series), scale 1:62,500, edition of 1944

The planimetric details shown on this quadrangle are in good agreement with those shown on Survey No. J-5987, with the exception that the marsh area shown on the survey at approximately latitude 43°47'00" and longitude 69°43'35". This marsh area does not appear on the Quadrangle.

** No marsh appears on Chart in the vicinity of Little River and Griffith Cove.

More marsh appears on survey.

GEOGRAPHIC NAMES
The difference between the two surveys is in all probability a difference of interpretation of the MHWL occurring on a wide, gently sloping sand beach. The MHWL on the field inspection photo was determined by a measured distance from an identifiable feature to a point on what the field inspector determined to be the MHWL. Approximately 300 meters of shoreline is shown on T-6928a and the greatest difference is confined to about the first 100 meters immediately south of Griffith Head.

Review Report of
Shoreline Map Manuscript T-5989

July 1945

28. Detailing

Corrections to shoreline and other planimetric detail have
been shown in red acetate ink. Explanatory notes were added
wherever deemed necessary.

Roads shown with center line only were compiled previously
for Nautical Charts and should not be smooth drafted unless
noted otherwise. These roads were shown in red acetate ink on
the map manuscript.

34. Landmarks and Aids to Navigation

Two landmarks "House, White" and "Colonial House" were not
mentioned in the descriptive report for T-5989. These land-
marks were noted on Form 567 and Chart Section 314-3 attached
to Chart Letter 909 (1944) and shown on the map manuscript with
a 2½ mm circle.

*There is a disagreement in the position of the mean
high-water line along the beach just south of Griffith Head
as shown on Graphic Control Survey T-6928a. The mean high-
water line as shown on the field inspection photographs was
used because of the later date of the field inspection.

These surveys are superseded by the map manuscript in their
common areas for all common detail.

The position of the mean high-water line on the map
manuscript supersedes the mean high-water line as shown on the
hydrographic surveys since the position of the mean high-water
line on the latter surveys was taken from the original compila-
tion prior to review.
Application to Nautical Charts
The map manuscript has been applied to nautical charts prior to review.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under “Comparison with Charts” in the Review.
Low water details have been incorporated on H-6832.
No changes or additions have been transferred to manuscript.

RH Casareno
