DESCRIPTIVE REPORT
Topographic Sheet No. M - 1955.

LOCALITY
Puget Sound
Vicinity of Fox Island and Chambers Creek
Gibson Pt. and Vicinity

CHIEF OF PARTY
Jack Senior.
DEPARTMENT OF COMMERCE
U.S. COAST AND GEODETIC SURVEY

TOPOGRAPHIC TITLE SHEET

The Topographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.

Field No. M-1935.

REGISTER NO.

State---------------------------Washington---------------------------

General locality Puget Sound

Locality Fox Island and Chambers Creek

Scale 1:10,000 Date of survey July 1935.

Vessel U.S.C.G.S.S. EXPLORER

Chief of Party Jack Senior

Surveyed by Edwin C. Baum

Inked by Edwin C. Baum

Heights in feet above M.H.W. to ground

Approximate contour, maximum interval 50 feet

Instructions dated March 1934.

Remarks:

DESCRIPTIVE REPORT

TO ACCOMPANY TOPOGRAPHIC SHEET "M - 1936",

PUGET SOUND - WASHINGTON.

AUTHORITY:

The survey was executed in accordance with the Director's Instructions, dated March 29, 1934, Project H.T. - 171.

LIMITS:

This survey includes the southern part of Fox Island and on the mainland from the south end of Day Island to a point approximately three quarters mile south of Chambers Creek.

GENERAL DESCRIPTION:

The general appearance of the mainland conforms with the remainder of the country in this vicinity. Rising abruptly from the shore it attains an even height of approximately 250 feet and appears as a flat top plateau from shipboard. Near the south end of this area, Chambers Creek breaks the monotony of this plateau.

Several large sand pits are found here that form excellent landmarks. Only one pit is in operation at present and is located at topographic signal "PA".

The section referred to herein as the mainland area is partly covered with trees and partly with grass. Inspection of sheet will best determine these areas.

The southern part of Fox Island included in this survey appears as a ridge lying in a general northwest and southeast direction. The south western slope of ridge rises abruptly while the north eastern slope has a gradual, gentle rise. The entire area on Fox Island is heavily wooded with both evergreen and deciduous trees.

Along the Fox Island shore, steep dirt eroding bluffs of varying heights are found. These bluffs, for occasional short distances, give away to normal slopes.

CONTROL:

Triangulation control points executed during seasons of 1924 and 1925, and based on North American 1927 datum were used.

SURVEYING METHODS:

Standard plane table survey methods were used. Topographic
signals were cut in from triangulation stations on the opposite shore and checked by traversing between control points.

No errors were found.

All off-lying features were rodded in.

CONTOURS:

Contours along the main, or eastern shore of sound were obtained in the usual manner and were more definitely determined due to the scarcity of trees.

See descriptive report "E - 1935" for explanation of contours on Fox Island.

TOWNS:

There are no towns in this area.

Sunnyside Beach is a summer resort, principally for weekend swimming and picnicking. Cottages may be rented here. One man owns and operates entire resort. One of the best sand beaches in sound is maintained here.

DOCKS:

A ferry dock is located at Fox Point. This dock is constructed of concrete piers and is in good condition. No boats stop there at present.

A dock in fair condition is located at topographic signal "SAI". The dock was used for loading barges at sand pit. This sand pit has been out of operation for several years and from best available information will not be operated in the near future.

A sand pit, with dock in excellent condition, operating at full capacity is located at topographic signal "PA".

A dock in good condition is located in Chamber Creek just north of topographic signal "CHIM". This dock is maintained by the Everett Pulp and Paper Plant. The plant is out of operation at present but is kept in condition to start immediate operations.
COMPARISON WITH CHART NO. 6460:

Many changes are noted between chart and this survey. These changes are man-made. Chart does not show sand pits, sand pits docks, railroad, draw bridge, dam and other minor details.

Too few contours are shown on chart to permit a comparison.

INSERT:

The extreme eastern end of Chambers Creek falls off the topographic sheet. The points marked "A" and "B" of insert are common to the points marked "A" and "B" on shoreline. The insert is in azimuth.

TOPOGRAPHIC SIGNALS:

Except as noted on sheet, all topographic signals shown outside of high water line are targets attached to stumps, fallen trees and etc., and are not of a permanent nature.

DAM:

A dam as shown is located in Chambers Creek. This dam was constructed to furnish fresh water to the two sandpit companies and the Everett Pulp and Paper Plant. An unattended pumping station is maintained at dam. The dam has an approximate drop of eight and one half feet to mean high water. A fish ladder is located at west end of dam.

ROCKS:

Several rocks were found along the Fox Island shoreline. The heights of critical rocks are noted on sheet.

OTHER ITEMS:

The railroad maintains an elevation of thirteen feet throughout the area of this sheet. Where the railroad is close to the highwater line, a heavy rock fill was made. This forms a steep rocky shoreline.

The small section of land outside the railroad tracks at topographic signal "MICE" has an excellent sand beach. Here, as in every case where good sand beaches are to be had on the sound, summer homes are built.
The buoy, Telviba Shoal, as shown was located by four cts.

The long narrow neck of land in Chambers Creek extending in a northeast direction just north of topographic signal "TEL" is occupied by a saw mill. This mill was in operation during period of survey.

The bight, between neck of land described in previous paragraph and railroad embankment to westward is used as a small boat harbor.

The group of piling just south of topographic signal "TUM" and shown outside of high water line is the remains of a loading platform for unoperated sandpit.

The draw bridge at Chambers Creek has a width clearance of forty five feet and an overhead clearance of nine feet above mean high water. This bridge is unattended.

The outlines of the sand pits as shown were rodded in and corrected elevations, accurately determined. The pit east of topographic signal "PA" is in operation at present and is constantly changing shape. The other pits are out of operation at present, and from best available information do not anticipate future operations.

LOW WATER LINE:

The low water line was transferred from smooth hydrographic sheet.

C. K. Green

●
Title (Par. 56) Gibson Point and Vicinity, Wash.

Chief of Party: Jack Senior Surveyed by E.C. Bowman Inked by E.C. Bowman

1. The survey and preparation for it conform to the requirements of the Topographic Manual. (Par. 7, 8, 9, 13, 16.)

2. The character and scope of the survey satisfy the instructions.

3. The control and closures of traverses were adequate. (Par. 12, 29.)

4. The amount of vertical control that the Manual specifies for -contours-formalines- was accomplished. (Par. 18, 19, 20, 21, 22, 23.)

See also Descriptive Report for T-449

5. The delineation of -contours-formalines- is satisfactory. (Par. 49, 50.)

6. There is sufficient control on maps from other sources that were transmitted by the field party to enable their application to the charts. (Par. 26.) None Submitted.

7. High water line on marshy and mangrove coast is clear and adequate for chart compilation. (Par. 16a, 43, 44.)

8. The representation of low water lines, reefs, coral reefs and rocks, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41.) Low Water Line transferred from Hydrographic Survey (See D.R. page 4)

9. Rocks and other important details shown on previous surveys and on the chart were verified. (Par. 25, 26, 27.)

See Reverse Side

10. The span, draw and clearance of bridges are shown. (Par. 16c.)

11. Locations and elevations of summits are given. (Par. 19, 51.)

12. The tree line was shown on mountains. (Par. 16g.)

NOTE: Strike out paragraphs, words or phrases not applicable and modify those requiring it. Paragraph numbers refer to those in the Topographic Manual. Use reverse side for extending remarks.
Paragraph 9

H499 (1855)

This survey is primarily a preliminary hydrographic survey and is only comparable to the present survey in a very general way.

T1671 (1877-8)

This survey is on a scale of 1:20,000 whereas the present survey is on 1:10,000. The shore line on T1671 is generally in good agreement with the present survey but due to the difference in scale the present survey is more in detail, especially as to the numerous man-made changes.

T1671-a (1910)

This revision survey of 1671 shows docks opposite the sand pit which are further developed on the present survey.

T6447 supersedes H499 and T1671-a in part.

A comparison between chart 6460 and the present survey is given on page 3 of the Descriptive Report, which is considered adequate.
13. The descriptive report covers all details listed in the Manual, in so far as they apply to this survey. (Par. 64, 65, 66, 67.)

14. The descriptive report also contains additional information required in aero-topography relative to type of photographs, method of compilation and type of ground control.

15. The descriptions of recoverable stations and references to shore line were accomplished on Form 524. (Par. 29, 30, 57, 67 except scaling of IMs and DFs, 68.) None submitted.

16. A list of landmarks for charts was furnished on Form 567 and plotting checked. (Par. 168, e, 60.)

17. The magnetic meridian was shown and declination was checked. (Par. 17, 52.) Declination N65°E of value on chart. No note of having checked declinatrice.

18. The geographic datum of the sheet is N.A.1927 (Adjusted) and the reference station is correctly noted. (Par. 34.)

19. Junctions with contemporary surveys are adequate. —
   Jones T6446 (1935) on the North
   Joins T6440 (1935) on the West
   Joins T6451 (1935) on the South

20. Geographic names are shown on the sheet and are covered by the Descriptive report. (Par. 64, 66k.)

21. The quality of the drafting is good. (Par. 31, 32, 33, 35, 36, 37, 38, 39, 40, 41, 42, 45, 46, 47, 48, 49, 50.)

22. No additional surveying is recommended.

23. The Chief of Party inspected and approved the sheet and the descriptive report after review by.

24. Remarks:

Examined and approved:
